Administration:
See Business Administration.

Adult Education:
resolution adopted by Subcommittee at meeting of I.L.O. Petroleum Industrial Committee, 178.
See also Workers' Education.

Age Distribution:
United Kingdom—
age distribution of male and female employees as at end of May, 1950, 1334.

Ageing:
U.S.A.—
The Aged and Society—research symposium published by Industrial Relations Research Association, 309.

Agreements:
Recommendation on Collective Agreements adopted at 34th Session of International Labour Conference, 1346, 1351.
provisions of master agreements covering both Canadian and United States workers of Electric Auto-Lite Company, American Can, and Continental Can Company, 445.
Canada—
monthly summary of collective agreements and wage schedules—58, 227, 351, 538, 684, 820, 971, 1102, 1245, 1371, 1532, 1666.
monthly summary of agreements under Collective Agreement Act (Quebec)—63, 232, 356, 543, 689, 826, 976, 1106, 1250, 1376, 1537, 1672.
summary of collective agreements under Industrial Standards Acts: Alberta, 65, 831, 1675; New Brunswick, 360, 1110, 1540, 1674; Nova Scotia, 360, 1540; Ontario, 65, 361, 692, 830, 1110, 1254, 1541, 1674; Saskatchewan, 361, 694, 1255, 1541.
federal-provincial farm labour agreements for 1951, 174.
changes in wage rates and hours of work in recent collective agreements, 1111, 1664.
changes in wage rates, hours of work and cost-of-living adjustment formulae in collective agreements, 834.
survey of recent collective agreements—wage changes in relation to duration of contract in recent agreements, 1531.

Agreements—*Con.*
cost-of-living escalator clauses in collective bargaining agreements, 1633.
numbers of workers affected by collective agreements in 1950—annual survey of Department of Labour, 1639.
arbitrator's award in the matter of The Maintenance of Railway Operation Act, 194.
provisions of master agreements covering both Canadian and United States workers of Electric Auto-Lite Company, American Can, and Continental Can Company, 445.
collective agreements in chemical products industry, 472-85—duration of agreements, 473; grievance procedure, 474, 480; union security, 475, 480; seniority, 475, 481; hours of work, 476, 481, wage rates, 476, 482; overtime and premium pay, 477, 483; reporting pay and minimum call pay, 483; rest periods, statutory holidays, vacations with pay, 477, 484; paid sick leave, group insurance pensions, 479; disciplinary measures, 479, 485; company union consultation, 479, 485; shift work, 482.
union security provisions in collective agreements in manufacturing industry, 1359-61.
office workers—provisions of collective agreements of, 33.
tobacco industry—collective agreements in, 168.
collective agreements in certain industries—
coal mining, 387; metal mining, 388.
hotel industry, 1567.
laundry and dry cleaning, 1574.
leather products, 96.
restaurant industry, 1571.
retail trade, 1733.
B.C.: amendment to Industrial Arbitration and Conciliation Act urged by T. and L.C. affiliates, 40.
Man.: number of apprenticeship agreements completed and cancelled in 1949, 87.
Que.: legislation enacted in 1951, 845; amendment to Labour Relations Act *re* duration of collective agreements, 702; council of arbitration held to have jurisdiction to deal with performance or non-performance of a term of a collective agreement, 698; monthly summary of agreements under Collective Agreement Act (Quebec)—63, 232, 356, 543, 689, 826, 976, 1106, 1250, 1376, 1537, 1672.
Sask.: amendment to Public Service Act (1947) *re* collective agreements, 999.
United Kingdom: survey of normal hours of labour, and rates of wages for overtime work determined by collective agreements in principal industries, 1075; number of wage-earners covered by guaranteed weekly wage orders, 17; agreements providing holidays with pay for manual wage-earners, 1362.
U.S.A.: Taft-Humphrey amendment to Labour-Management Relations Act, 1707; union shop and check-off clauses permitted in collective agreements by amendment to Railway Labour Act, 701; provisions of agreement reached in dispute between trainmen and railway operators, 918; automatic cost-of-living or escalator clauses in wage agreements in 1950, 308; pension and insurance plans in collective agreements, 308; wage

adjustment clauses in labour contracts, 159; holiday provisions in union agreements in 1950, 309; agreements containing provision for health and welfare plans in automobile industry, 1652; employer-union liability established by National Labour Relations Board when worker discharged under illegal union-shop agreement, 20; safety provisions in union agreements, 20; extent of multi-plant or multi-employer bargaining, 158; pension provision of agreement between General Electric and International Union of Electrical Workers (C.I.O.), 1625; provisions of master agreements covering both Canadian and United States workers of Electric Auto-Lite Company, American Can, and Continental Can Company, 445.

AGREEMENTS RESULTING FROM PROCEEDINGS UNDER THE CONCILIATION AND LABOUR ACT AND INDUSTRIAL RELATIONS AND DISPUTES INVESTIGATION ACT:
Abitibi Coach Lines and Transportation Company, Limited, and employees, 193.
Alberta Wheat Pool, Vancouver, and employees, 817.
British Columbia Coast Steamship Service (C.P.R.), and employees, 55-56.
Buntain and Bell Company, Charlottetown, and employees, 1529.
Canada Coach Lines Limited, Hamilton, and employees, 817.
Canadian Marconi Company, and employees, 1366, 1369.
Canadian National Steamships, and employees, 55-56.
Canadian Overseas Telecommunication Corporation, and employees, 1663.
Canadian Pacific Air Lines Limited, and employees, 817, 1366, 1529.
Canadian Pacific Railway Company (B.C. Coast Steamship Service), and employees, 55-56.
Canadian Pacific Railway Company, and employees (sleeping and parlour car conductors and parlour car attendants), 968.
Chaudiere Water Power Owners and Lessees, 193.
Colonial Coach Lines Limited, and Provincial Transport Company, Montreal, and employees, 1095.
DeLuxe Transportation Limited, North Bay, and employees, 502-3.
Gatineau Bus Company, Limited, Hull, and employees, 1529.
Keystone Transports Limited, Montreal, and employees, 1529.
Lakehead Terminal Elevator Association (representing ten elevator companies), Fort William and Port Arthur, and employees, 193.
National Harbours Board, Halifax, and employees, 1231.
Northern Bus Lines, Limited, Flin Flon, and employees, 816.
Packers Steamships Company, Limited, and employees, 55-56.
Pan American World Airways, and employees, 1231.
Provincial Transport Company and Colonial Coach Lines Limited, Montreal, and employees, 1095.

Agreements—*Con.*

Railway Express Agency, New York, N.Y., and Canadian employees, 817.
Robin Hood Flour Mills Limited, Saskatoon, and employees, 347.
Saguenay Terminals Limited, Port Alfred, Que., and employees, 1529.
Shipping Federation of British Columbia—Canadian National Steamships, Canadian Pacific Railway Company (B.C. Coast Steamship Service), Frank Waterhouse of Canada Limited, Packers Steamships Company, Limited, and Union Steamships Limited, and employees, 55-56.
Shipping Federation of Canada, Inc., and employees (longshoremen in Port of Montreal), 816-17.
Smith Transport Limited, Montreal, and employees, 347.
Trans-Canada Air Lines and employees, 502, 1095.
Union Steamships Limited, and employees, 55-56.
Frank Waterhouse of Canada Limited, and employees, 55-56.
Yukon Consolidated Gold Corporation Limited, Dawson, and employees, 347.

Classification by Industries:

Construction—

bricklayers, Halifax and Dartmouth, 1540.
building labourers, Calgary, 1659; Ottawa, 693.
building trades, Chicoutimi, 358, 1251; Chicoutimi and district, 691; Chicoutimi and neighbouring counties, 1672; counties of Drummond, Arthabaska and Nicolet, 977, 1108; Hull, 64, 358, 828; Joliette, 829; Montreal, 233, 829, 1108, 1539; Quebec, 977, 1109, 1251, 1539, 1672; St. Hyacinthe, 64, 546; St. Jérôme, 64, 1539; St. John and Iberville, 977; Sherbrooke, 829, 1109, 1539; Sorel, 1377; Three Rivers, 828, 1253.
carpenters, Belleville, 65; Brockville, 1254; Halifax and Dartmouth, 1540; Kitchener and Waterloo, 62; Medicine Hat, 66; Moose Jaw, 1541; Ottawa, 831; Owen Sound, 1541; Prince Rupert, 1670; Saint John, N.B., 1103, 1540; St. John's, 1669; Saskatoon, 974; Sydney, 360; Vancouver and New Westminster, 1374; Winnipeg, 974.
electrical workers, Belleville, 65; Calgary, 540; Cornwall, 1674; Halifax and Dartmouth, 1540; London, 693, 1249, 1254; Moncton, 360, 1110; Oshawa and Whitby, 693; Ottawa, 1110; Regina, 1255; Saint John, 1540; Windsor, 1111.
labourers, Halifax and Dartmouth, 1540.
mechanical construction and repair, Quebec district, 1539.
metal trades, Quebec district, 546.
operating engineers, Vancouver, 1375.
ornamental iron and bronze industry, Toronto, 232.
painters, Halifax and Dartmouth, 1540; Ottawa, 692; St. John's, Nfld., 1533; Winnipeg, 974.
painters and decorators, Hamilton, 1254; Kingston, 831; Toronto, 693.
plasterers, Halifax and Dartmouth, 1540; Ottawa, 1110; Toronto, 61, 62.

Agreements—*Con.*

Classification by Industries—*Con.*

plumbers, Belleville, 1541; Calgary, 1534; Halifax and Dartmouth, 1540; Hull, 1539; London, 62; Moncton, 1674; Ottawa, 65; Saint John, 1540; Three Rivers, 546; Windsor, 693.
power project, Niagara Falls, 825.
reinforcing ironworkers, Vancouver, 1249.
sheet metal workers, Halifax and Dartmouth, 1540.
structural iron workers, British Columbia, 1249.
structural steel workers, Ontario, 1534.

Logging—

logging, British Columbia Coastal Region, 820; Northern Interior District, B.C., 972; Northwestern Ontario, 1371; Southern Interior District (Cranbrook Area), B.C., 971; Southern Interior District (Kamloops and Kelowna Area), B.C., 971.

Manufacturing—fur and leather products—

fur workers, Montreal, 59; Toronto, 229; Winnipeg, 1372.
fur workers (retail), Montreal, 1376.
shoe factory, Province of Quebec, 233; Toronto, 230.
shoe manufacturing, Province of Quebec, 356, 1537.
tannery employees, Province of Quebec, 1107.

Manufacturing—metal products—

agricultural implement manufacturing, Toronto, Brantford and Woodstock, 1247.
aluminum manufacturing, Kingston, 59, 60.
aluminum products manufacturing, Kingston, 1667, 1668.
automobile manufacturing, Chatham, 61; Hamilton, 354; Windsor, 60.
can manufacturing, Montreal, 687.
clock and watch repairing, Montreal, 690; Vancouver, 1668.
electrical products plant, St. Catharines, 232.
electrical products manufacturing, Brockville, 686; Hamilton, 1373; Montreal, 686.
garages, St. John's, Nfld., 972; Sherbrooke, 690, 1538; Vancouver, 1374.
garages and service stations, Calgary, 1675; Camrose, 1675; Edmonton, 65; Lethbridge, 831; Montreal, 1250; Quebec, 1107; Rimouski, 1108; Victoria, 824.
iron products manufacturing, Oshawa, 1103.
marble masons, tile setters, and terrazzo workers, Toronto, 1104.
mechanical construction and repair, Quebec district, 1538.
metal products factory, Montreal, 231.
metal products manufacturing, Brantford, 687; Galt, 540; Guelph, 354; Hamilton, 973; Peterborough, 1247; Quebec district, 546; Toronto, 353; Vancouver, 354; Winnipeg, 1374.
ornamental iron and bronze industry, Montreal, 233; Montreal, Three Rivers and Sherbrooke districts, 827, 1107, 1377; Toronto, 231.
radio manufacturing, Leaside, 1248; Montreal, 1246.
service stations, Chicoutimi, 977.
sheet metal manufacturing, Montreal, 358, 690, 976.

Agreements—*Con.*

CLASSIFICATION BY INDUSTRIES—*Con.*

shipbuilding, Montreal, 1102, 1667.
smelter, Trail, 1668.
steel plant, Hamilton, 1533; Sydney, 230.
steel products manufacturing, Montreal, Toronto and London, 823.

Manufacturing—miscellaneous—

mattress manufacturing, Toronto, 355.

Manufacturing—

non-metallic minerals and chemicals—

abrasive manufacturing, Chippawa, 61.
ammunition manufacturing, Brownsburg, 688.
asbestos products manufacturing, Asbestos, P.Q., 688.
building materials, Province of Quebec, 1539.
chemical plant, Shawinigan Falls, 973.
chemicals manufacturing, McMasterville, 688.
drug manufacturing, Toronto, 824.
explosives manufacturing, James Island, B.C., 355; Nobel, 355.
fertilizers manufacturing, Calgary, 1669.
glass processing industry, Quebec, 827.
oil refinery, Vancouver, 1533.
paint manufacturing, Province of Quebec, 1251; Toronto, 1668.
pottery manufacturing, Hamilton, 824.

Manufacturing—printing and publishing—

bookbinders, Montreal, 822.
lithographers, Montreal, Ottawa, Toronto, Hamilton and London, 823.
printers (typographers), Montreal, 229, 822; Vancouver, 353.
printing pressmen, Montreal, 822.
printing trades, Chicoutimi, 1538; Montreal, 823, 827; Quebec, 358; Quebec district, 544.

Manufacturing—

pulp, paper and paper products—

paper box manufacturing (corrugated paper), Province of Quebec, 976, 1377, 1537.
paper box factories (uncorrugated paper), Province of Quebec, 544; Quebec district, 1376.
pulp and paper mills, Ontario, 1246.

Manufacturing—rubber products—

rubber products manufacturing, Hamilton, 1102; Toronto, 539.

Manufacturing—textiles and clothing—

cotton textile manufacturing, Marysville and Milltown, N.B., Cornwall and Hamilton, Ont., 821.
dress manufacturing, Province of Quebec, 690, 1376, 1672.
linoleum manufacturing, Farnham, 1102.
men's and boys' clothing industry, Province of Quebec, 827, 976.
men's and boys' hat and cap industry, Province of Quebec, 356.
men's clothing manufacturing, Toronto, 352.
millinery manufacturing, Province of Ontario, 830; Province of Quebec, 544.
rayon textile workers, Cornwall, 1372.
sportswear manufacturing, Toronto, 1245.
women's cloak and suit manufacturing, Province of Ontario, 361; Province of Quebec, 543.
work and sports clothing manufacturing, Winnipeg, 685.

Agreements—*Con.*

CLASSIFICATION BY INDUSTRIES—*Con.*

Manufacturing—tobacco and liquors—

brewery, London, 351; Regina, 228.
distillery, New Westminster, 351; Walkerville, 58.

Manufacturing—vegetable foods—

bakeries, Calgary, 1667; Edmonton, 1666.
bakers and bakery salesmen, Moose Jaw, 361; Prince Albert, 1255; Quebec, 63, 690; Regina, 694.
bakery employees, Toronto, 538, 539.
biscuit manufacturing, Moncton, 972.
cereal mill, Saskatoon, 821.
food products manufacturing, Cardinal, 685; Chatham, 228; Quebec, 1250.
sugar refinery, Montreal, 1245.

Manufacturing—wood products—

furniture manufacturing, Vancouver, 352.
planing mill, Winnipeg, 539.
wood products manufacturing, British Columbia Coastal Region, 822.
woodworkers, Southern Interior and Northern Interior Districts, B.C., 972.

Mining—coal mining—

coal mining, Stellarton, 538; Sydney Mines, 538.
coal mining (bituminous), Western Canada, 821.
coal mining (domestic), Drumheller, Lethbridge and Coalspur, 820.

Mining—metal mining—

metal mining, Falconbridge, 684; Pamour, 228; Pioneer Mines, B.C., 1532; Schumacher, 227; Timmins, 228; Yellowknife, N.W.T., 1371.

Mining—non-ferrous smelting and quarrying—

building materials, Province of Quebec, 1537.

Mining—non-metallic mineral mining—

asbestos mining, Asbestos, P.Q., 684; Thetford Mines, 684.

Service—business and personal—

hotel, London, 542.
laundry and dry cleaning plant, Toronto, 542.
tavern, Edmonton, 689; Port Arthur and Fort William, 1671; Quebec, 977.

Service—professional establishments—

building service employees, Toronto, 62.
hospital and charitable institution employees, Quebec district, 359.
school employees, Kelowna, 1536.

Service—public administration—

civic employees, Calgary, 1105, 1106; Kitchener, 1104; Regina, 1535, 1536.
fire fighters, Calgary, 1106; Regina, 1536; Saskatoon, 825.
policemen, Vancouver, 826.

Trade—

dairies, Calgary, 832; Ottawa, 1104; Quebec and Lévis, 1109.
hardware and paint stores, Quebec, 1253.
hardware store employees, Vancouver, 1375.
retail food stores, Quebec, 1253.
retail stores, Chicoutimi, 1673; Quebec, 64.
wholesale and retail stores, Rimouski, 830.

Agreements—*Con.*
CLASSIFICATION BY INDUSTRIES—*Con.*
Transportation and Public Utilities—electric railways and local bus lines—
street transit system, Ottawa, 541; Regina, 1535; Saskatoon, 1670.
Transportation and Public Utilities—local and highway transport—
interurban bus transportation, Hamilton, 975.
truck drivers, Montreal, 547; Quebec, 1673.
Transportation and Public Utilities—storage—
grain elevators, Fort William and Port Arthur, 542.
Transportation and Public Utilities—water transport—
checkers (ocean navigation), Quebec, 1673.
checkers and coopers (ocean navigation), Montreal, 1378.
freight handlers (inland and coastal navigation), Montreal, 830.
longshoremen (ocean navigation), Montreal, 1377; Quebec, 1672.
longshoremen, checkers and coopers (ocean and inland), Sorel, 547.
National Harbours Board employees, Saint John, N.B., 825.
shipliners (ocean navigation), Montreal, 1378.

Agriculture:
items on agenda of 34th session of International Labour Conference, 498.
Convention on minimum wage-fixing machinery in agriculture, supplemented by Recommendation, adopted at 34th Session of International Labour Conference, 1347, 1352.
proposed texts on holidays with pay in agriculture discussed at 34th session of International Labour Conference, 1347.
Canada—
eighth annual Federal-Provincial Farm Labour Conference (1950)—address of Minister of Labour, 170; provincial directors' reports, 170; situation in U.S.A., 174; agreements and program for 1951, 174.
reports to National Advisory Council on Manpower, 1620.
numbers of workers affected by collective agreements in 1946, 1949 and 1950, 1639, 1640.
United Kingdom: holidays with pay for manual wage-earners provided by Orders issued by Agricultural Wages Boards of England and Wales, Scotland and Northern Ireland, 1362, 1363.

Construction—buildings and structures—
bricklayers, Windsor, 1053.
building trades workers, Windsor, 1053.
carpenters, Charlottetown, 1053; Corner Brook, 1186; Cornwall, 300; Fort William and Port Arthur, 437, 609; Kamloops, Kelowna, Penticton, Vernon, 1326, 1443; Nanaimo, 1611; St. John's, 1611, 1784; Sydney, Glace Bay, New Waterford and North Side, N.S., 1186, 1325, 1443; Toronto, 764.
carpenters and labourers, Cornwall, 144, 299.
construction workers, Barrie, 1611; Froomfield, 1445; Parent, P.Q., 1053.
electricians, apprentices and helpers, Toronto, 1326, 1443.
labourers, Hamilton, 610; Sarnia, 1326; Windsor, 1186.
painters and decorators, Kitchener, 1611.
painters, decorators and paperhangers, London, 610.
plumbers, Belleville, 437.
plumbers, pipefitters, steamfitters, etc., New Westminster and Vancouver, 1326, 1443.
sheet metal workers, St. John's, 1785; Windsor, 1445.
steel erectors, Toronto, 437.

Construction—miscellaneous—
electric generating plant boiler installers, Toronto, 1612.
hydro conversion warehousemen and stockkeepers, London, 1612.
oil burner installers, etc., Hamilton, 1187.
operating engineers (power plant), Windsor, 1445.
power project pipefitters, electricians and helpers, Pine Falls, Man., 1186.
subway carpenters, Toronto, 1186.
subway construction rodmen, Toronto, 437.

Logging—
loggers, Menzies Bay, B.C., 609, 762.

Manufacturing—animal foods—
fish packers, Yarmouth, 1052.
meat packing plant workers, New Westminster, 144.
packing plant workers, Brantford and Burford, 1184, 1324.

Manufacturing—boots and shoes (leather)—
shoe factory workers, Quebec, 436, 609; Vancouver, 143.

Manufacturing—fur, leather and other animal products—
fur factory workers, Quebec, P.Q., 1610, 1783; Toronto, 1784.
handbag factory workers, Montreal, 609, 762, 1444, 1609, 1783.

Manufacturing—metal products—
aluminum plant workers, Shawinigan Falls, 1444, 1609, 1783.
auto body factory workers, Windsor, 911, 1053.
auto parts factory workers, Toronto, 1052.
automotive parts factory workers, Oshawa, 1185, 1324.
axle forgers and turners, Trenton, 1326.
boilermakers, Vancouver, 763.
brass and copper factory workers, New Toronto, 437.
bus body factory workers, Ste. Claire, 1785.
can and canning equipment factory workers, Toronto and New Toronto, 437.
dry battery factory workers, Toronto, 911, 1051, 1183, 1324, 1442.
electrical apparatus factory office workers, Peterborough, 1052; Toronto, 1052.
electrical apparatus factory workers, Brantford, 1785; Toronto, 143.

Strikes and Lockouts—*Con.*

farm implement factory workers, Toronto, 437.
foundry and machine shop workers, Toronto, 610, 1052, 1183, 1324, 1442.
foundry workers, Port Colborne, 144; Trenton, N.S., 1611.
furnace factory workers, Ingersoll, 1785.
hardware factory workers, Hamilton, 1610, 1783.
machine and tool factory workers, Ingersoll, 911.
machinists, Woodstock, 1610.
metal alloy factory workers, Beauharnois, 763.
metal factory workers, Fort Erie, 143, 299.
metal products factory workers, Fergus, 1052, 1185.
motor vehicle factory workers, Windsor, 144, 1610; (office) Windsor, 1785; (painters) Windsor, 763, 911; (stock room and jitney drivers) Windsor, 763.
radiator factory workers, Plessisville, 1053, 1183, 1324, 1442.
refrigerator factory workers, Brantford, 610, 762; Hamilton, 911, 1051; London, 1053, 1183.
screw and gear factory workers, Toronto, 1185.
sewing machine factory workers, St. Johns, 1185, 1324, 1442.
sheet metal products factory workers, Toronto, 911, 1051.
steel barrel factory workers, Hamilton, 610, 762.
steel mill maintenance men, Sault Ste. Marie, 1444.
steel products factory workers, London, Toronto, Montreal and Winnipeg, 610; Montreal, 143, 299, 1785.
storage battery factory workers, Vancouver, 1611, 1783.
structural iron and steel fabricators and erectors, London and Port Robinson, 1186, 1325.
structural steel fabricators, Windsor, 1053.
truck and trailer body factory workers, Weston and Swansea, 1185.
wire rope and cable factory workers, Lachine, 143, 299.

Manufacturing—miscellaneous—

chrome furniture factory workers, Vancouver, 1186, 1325.
furniture and clothing factory workers, Victoria, 437, 609.
mattress factory workers, Toronto, 1611.
sporting goods factory workers, Brantford, 1186.
upholsterers, Montreal, 1611.

Manufacturing—

miscellaneous wood products—

basket factory workers, Grimsby, 1610.
furniture factory workers, Kitchener, 763, 910, 1051; La Tuque, 1185; Nicolet, 1610, 1783; Southampton, 1610; Waterloo, 763, 910.
lumber mill workers, Bathurst, 1326, 1442; Sarnia, 911, 1051.
planing and box factory workers, Digby, 1325.
plywood factory workers, Quesnel, B.C., 1325, 1442; Scotstown, P.Q., 1444; Vancouver, 1185, 1324, 1442.
sash and door factory workers, Regina, 1052, 1183; St. Joseph de Beauce, 763; Victoria, 911, 1051, 1183.

Strikes and Lockouts—*Con.*

saw and planing mill workers, Stewiacke, N.S., 763.
sawmill workers, Ripples, N.B., 1052; Sault Ste. Marie, 1052; Wellington, B.C., 1785.
veneer and plywood factory workers, Woodstock, 1785.
wood flooring factory workers, Beauceville West, P.Q., 1052, 1183.
wood products factory workers, Hespeler, 1185, 1324; Woodstock, 1785.
wood veneer factory workers, St. Leonard d'Aston, P.Q., 1444.

Manufacturing—

non-metallic minerals, chemicals, etc.—

brick and tile factory workers, Medicine Hat, 1186.
brick-yard workers, Boischatel, P.Q., 1186.
clay products factory workers, Medicine Hat, 300.
fibrous glass factory workers, Sarnia, 764.
marble finishers, Peterborough, 1053, 1183.
oil refinery workers, Vancouver, 1326.
plastic products factory workers, London, 1326, 1443, 1609, 1784.
rock wool insulation factory workers, Burdick, Sask., 610.

Manufacturing—printing and publishing—

bookbinders, Toronto, 609, 762.
printers, pressmen, etc., Truro, 1444, 1609.

Manufacturing—

pulp, paper and paper products—

newsprint pulpwood unloaders, Port Alfred, 1185.
paper and paper box factory workers, Vancouver, 1610, 1783.
paper bag factory workers, Morrisburg, 1185, 1324, 1442, 1609.

Manufacturing—rubber and its products—

rubber and plastic factory workers, Oakville, 1184.
rubber factory workers, Bowmanville and New Toronto, 1184; Hamilton, 1325; Kitchener, 144, 1051.
tire builders, Kitchener, 436.
tire factory workers, Kitchener, 609, 762, 1051.

Manufacturing—shipbuilding—

shipyard workers, New Westminster and Vancouver, 1611, 1783; Saint John, 1186, 1325; Vancouver, 143; Victoria and Esquimalt, 1611, 1783.

Manufacturing—textiles, clothing, etc.—

card tenders, Welland, 1052, 1183.
clothing factory workers, Sherbrooke, 144; Toronto, 1184; Vancouver, 1184, 1324.
cotton and rayon underwear factory workers, Sherbrooke, 143, 299, 436, 609.
dress factory workers, Louiseville, P.Q., 1325, 1442.
hat and cap factory workers, Montreal, 910.
hosiery factory workers, Nicolet, 1052, 1183.
knitting factory workers, Whitby, 609, 762.
pants factory workers, St. Therese, 763.
shirt factory workers, Montreal, 1444, 1609.
silk and nylon factory workers, Galt and Mitchell, 763.
silk and rayon factory workers, Dunnville, 763, 910.
sportswear factory workers, Toronto, 763.

Strikes and Lockouts—*Con.*
textile dyeing factory workers, Valleyfield, 300.
textile factory workers, Cornwall, 300, 1184, 1185; Dunnville, 1052, 1183, 1324; Milltown, N.B., 1185; St. John's, 1184; (card tenders) Welland, 1052, 1183.
uniform factory workers, Quebec, 1052.
weavers and spinners, Grand'Mere, 143, 299.
Manufacturing—tobacco and liquors—
brewery workers, New Westminster, Vancouver and Victoria, 1784.
tobacco factory workers, Hamilton, Granby and Montreal, 1444, 1609.
tobacco products factory workers, Hamilton, 910.
Manufacturing—vegetable foods, etc.—
bakery workers, Kelowna, 1184; St. John's, Nfld., 910.
flour mill and bag factory workers, Port Colborne, 436.
flour mill workers, Humberstone, 762; Saskatoon, 1444.
Mining—
coal miners, Aerial, 1784; Alexo, 762; Drumheller, 144, 609, 762, 910, 1443; Lethbridge, 300, 436; Nova Scotia, 1443; River Hebert, 910, 1051; Springhill, 910; Sydney Mines, 1184; Thorburn, 1443.
copper, gold and silver miners, Buchans, 1610.
gold miners, Timmins, 1784.
gold miners and millworkers, Timmins, 1325, 1442.
iron ore miners, Bell Island, 1444.
silver and lead miners, and millworkers, Alice Arm, 1784.
smelter and refinery workers, Deloro, 1184.
Service—business and personal—
auto and truck garage workers, Vancouver, 1054.
cleaners and dyers, Toronto, 143.
garage mechanics, etc., Toronto, 1187, 1325.
garage mechanics and apprentices, London, 1054, 1183.

CURRENT LABOUR CONDITIONS

This article summarizes the latest employment and labour information available at January 10, as the LABOUR GAZETTE *went to press. It was prepared by the Economics and Research Branch, Department of Labour.*

FOR THE past few months, a feature of the labour scene has been the growing scarcity of certain types of skilled workers on one hand, and the increasing seasonal unemployment of unskilled workers on the other. While the strong labour demands in the logging industry, and the increase in employment in manufacturing industries together had reduced the burden of seasonal unemployment considerably below that of the previous year, the numbers looking for work through the National Employment Service still exceeded that of the winter of 1948-49.

During December, there was little change in this basic pattern. Machinists, tool and die makers, welders and moulders continue in short supply, and many firms report difficulty in finding semi-skilled men with suitable experience on machine tools and metal working. At the same time, the usual seasonal declines in employment in construction and transportation, as well as in some manufacturing industries, have been reflected in a further increase in the number of applications for work on file with National Employment Service offices to 227,000 on January 1, about 41,000 above the total a month earlier, but 47,000 below the figure at the same date a year ago

This combination of shortages of particular skills and of a fairly substantial amount of seasonal unemployment reflects the fact that the pressures of increased defence preparations on the economy have so far been limited and specialized. While the expectation of further price rises and of future shortages has stimulated demand for a wide variety of goods and services, the greatest pressure has been on the metal working industries. There has been a very strong demand for such consumer goods as automobiles and electrical appliances, as well as for producers' equipment since it is here that shortages of materials are likely to affect production first. As far as labour is concerned, this means that the expectation of a defence budget much heavier than ever before necessary in peacetime has stimulated production and employment in those very industries most likely to compete with defence plants for supplies of suitable labour.

In the coming months, defence projects will likely have the advantage over non-defence plants in the competition for available supplies of skilled labour, because of the priorities given to the former in the matter of vital materials. To the extent shortages of key materials cause layoffs in non-defence industries, some workers will be released for employment in defence plants. It should be pointed out, however, that the housing shortage, among other factors, has tended to reduce labour mobility in the

75226—1½

past few years. To date, there have been relatively few layoffs in manufacturing industries due to shortages of materials, though inventories of steel are declining and many employers expect difficulties in the near future.

If the manufacturing industries as a group draw on the other industries for their labour supplies to any large extent over the coming year, a gradual redistribution of the working force as between industries will take place. Since the war, manufacturing employment as a whole has declined relative to that in construction, transportation, trade and services. Over the next year, the balance may alter again in favour of manufacturing, as workers move to factory jobs from other industries.

Such a shift, however, may leave the primary industries, services, and construction short of workers to meet their peak needs during the late summer and fall. The major part of the current surplus of labour will be quickly absorbed by the primary industries and construction when seasonal activity again begins. In effect, the normal seasonal slackening in these industries tends to conceal some of the problems of securing adequate labour supplies for all industries which will exist over the next year.

In a broad sense, it is just as vital that the strong labour needs of the primary industries be met over the coming year as it is that the defence commitments be filled. Base metals, for example, of which Canada is a major producer, are vital to defence. High levels of production in agriculture will also be essential, both to help maintain living standards in many European countries, and to help prevent rapid rises in the prices of foodstuffs in Canada.

In recent months, the rising food prices have been one of the most important factors in the increase in the cost-of-living index. These rising prices have stimulated demands for increased wages in many manufacturing industries. In some cases, wage rates have been tied to price rises through collective agreements. The latest figures reveal that until November at least the rise in the cost of living has been more or less matched by the rise in average earnings.

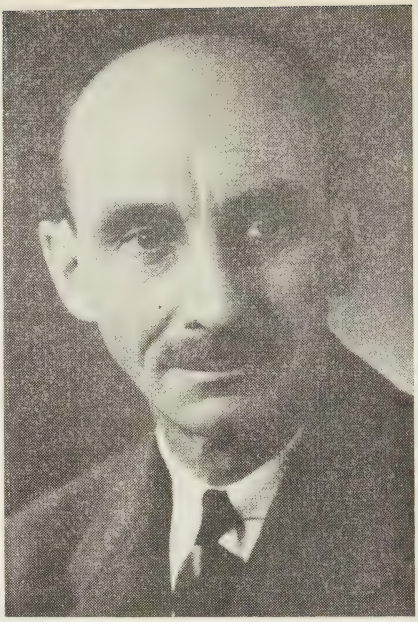
One of the most important increases in wage rates to take place recently was that granted to the railway workers by the decision of the arbitrator, Mr. Justice Kellock, handed down on December 18. A 7-cent an hour increase was granted to the non-operative railway employees, retroactive to September 1, 1950, and the 40-hour week was to begin on June 1, 1951, subject to the proviso previously agreed to that should a national emergency be declared, the workers would continue with the 48-hour week at straight time rates. At the time the arbitrator was called in, the employers were offering the 4-cent an hour increase granted in the Maintenance of Railway Operations Act, retroactive to September 1, 1950, and the unions were asking 7 cents an hour, retroactive to June, 1950. The arbitration award granted the hotel and water employees of the Canadian National Railways only the 4-cent an hour increase granted in the Act, and denied them the 40-hour week. This was done on the grounds that these employees of the railways were really in a separate industry, and that their wages and hours of work compared favourably with those in similar jobs elsewhere.

IN BRIEF . . .

Industrial employment continued to increase at the beginning of November when the index for the 8 leading industries rose to 137·9, 0·3 per cent higher than at October 1, and 4·2 per cent above November 1, 1949. The index of employment in manufacturing declined seasonally to 128·2 at November 1, 0·1 per cent below that of a month earlier, but exceeded the November, 1949 index by 3·2 per cent.

CURRENT LABOUR STATISTICS

(Latest available statistics as of January 10, 1951)



Principal Items	Date	Amount	Percentage change from Previous Month	Percentage change from Same date Previous Year
Manpower—				
Total civilian labour force (a)	Nov. 4	5,201,000	—	0·0
Persons with jobs (a)	Nov. 4	5,084,000	—	+0·6
Persons without jobs and seeking work (a)	Nov. 4	117,000	—	−20·4
Registered for work, N.E.S.				
Atlantic Region	Dec. 28	28,123	+18·1	−29·8
Quebec Region	Dec. 28	71,076	+28·7	−19·5
Ontario Region	Dec. 28	52,912	+13·4	−19·5
Prairie Region	Dec 28	37,712	+23·5	+0·8
Pacific Region	Dec. 28	37,054	+23·3	−12·9
Total, all regions	Dec. 28	226,877	+21·8	−17·2
Ordinary claims for Unemployment Insurance benefits	Dec. 1	124,794	+38·2	−18·1
Amount of benefit payments	Nov.	$4,184,103	+17·2	−17·1
Index of employment (June, 1941=100) (Eight leading industries)	Nov. 1	137·9	+0·3	+4·2
Immigration	Oct.	5,771	+14·7	−28·3 (b)
Industrial Relations—				
Strikes and lockouts—days lost	Dec.	8,438	—	+101·9 (b)
Number of workers involved	Dec.	2,562	—	+30·6 (b)
Number of strikes	Dec.	13	—	+5·4 (b)
Earnings and Income—				
Average weekly salaries and wages ((eight leading industries)	Nov. 1	$46.39	+0·9	+5·9
Average hourly earnings (manufacturing)	Nov. 1	$1.06	+0·9	+6·7
Average hours worked per week (manufacturing)	Nov. 1	43·0	+0·2	+0·5
Average weekly earnings (manufacturing)	Nov. 1	$45.67	+1·1	+7·2
Cost of living index (average 1935-39=100)	Dec. 1	171·1	+0·2	+5·9
Real weekly earnings (mfg. av. 1946=100)	Nov. 1	109·4	+1·0	+1·6
Total labour income	Sept.	$716,000,000	+4·4	+8·2
Industrial Production—				
Total (Average 1935-39=100)	Oct.	207·9	+1·7	+11·8
Manufacturing	Oct.	219·1	+2·2	+12·8
Non-durables	Oct.	196·6	+1·8	+8·0
Durables	Oct.	257·6	+2·9	+19·6
Trade—				
Retail trade	Oct.	$716,800,000	−4·0	+2·8
Exports	Nov.	$292,700,000	−7·1	+0·1
Imports	Nov.	$328,100,000	+2·3	+36·9

(a) Estimated on basis of sample labour force survey. Only those who did not do any work in the survey week are here classified as persons without jobs.

(b) These percentages compare the cumulative total to date from first of current year with total for same period previous year.

Data in this table are preliminary figures from regular reports compiled by various government agencies, including Dominion Bureau of Statistics, the Unemployment Insurance Commission, the Immigration Branch, Department of Citizenship and Immigration, and the Economics and Research Branch, Department of Labour. Detailed information can be found in the statistical appendix of the Labour Gazette.

NEW YEAR'S MESSAGE
OF THE HONOURABLE
MILTON F. GREGG
MINISTER OF LABOUR

In extending my sincere greetings to the citizens of Canada on the eve of another new year, I wish that circumstances were such that prosperity in the next 12 months were all that were necessary to bring peace and happiness for us all, for certainly our economic position would seem to be vigorous enough to assure us this prosperity. However, in these days we are keenly aware of the fact that prosperity is not the sole consideration. Canada is a member of a family of nations, and like the individual member of any family, her peace and happiness are not assured solely by a high level of prosperity.

World events rest heavily upon us as we look into 1951. Regardless of what develops during the coming year, we already know that we are committed to a course which will mean heartache to some, hardship to many, and sacrifices to all. Already there are hundreds of homes in Canada experiencing the anxious emotions known only to those who have members of the family thousands of miles from home in a theatre of war. We all can anticipate making sacrifices. No one would suggest that we at home could match the sacrifices of those who serve in a hostile area, but nevertheless we can all expect to shoulder our proper share of the burden of the United Nations defence.

In the face of these facts, our New Year's greetings this year would have a hollow ring were it not for the fact that each week that passes sees a further strengthening of the defence resources of the nations who stand for peace. And with this strengthening we must hope that there will be a comparable weakening of the resolve of the aggressor nations to dominate the world by force.

To prepare for an all-out war the task would be at least clear cut. But we must keep before us the fact that the aggressor is in the position of calling the tune. At any time his forces can be halted and the situation relaxed in an attempt to bewilder our course, wreck our economy. And so, we must keep our economy and trade healthy and strong, while at the same time pushing forward with vigour our preparedness schedule. However difficult it must be to superimpose on our normal economy a defence program which will place Canada in the position of being able to do her full part in assisting to meet any emergency, that is the task that must be done.

It can only be done, however, if we all unite in a determined effort to use our utmost powers wherever they are most needed. Added to the increased demands for greater defence production, we can anticipate growing demands for men in our Armed Forces. We must certainly expect some industries to face shortages of labour in the next 12 months. Canadian industry should plan accordingly. More women will undoubtedly be entering the labour force, and industry should not overlook the valuable contribution to production, as well as to the more important factor of human wellbeing, that can be made by the older workers and the physically handicapped.

In all this, we can confidently expect the complete support and co-operation of organized labour. Labour has continually shown its loyalty to the common cause. Its vigorous action in setting its own house in order in recent years has further added to its record of stability and sense of responsibility. It understands only too well what can happen when communism is left unhampered to do its work. Canada can be thankful for the sanity and loyalty of the million Canadian men and women who make up the front line force of our country's production effort. As Federal Minister of Labour I wish each one of them a useful and a happy New Year.

NEW YEAR'S MESSAGES OF LABOUR LEADERS

At the beginning of the New Year, messages of greeting were issued to the people of Canada by the leaders of the three major Canadian labour organizations.

Percy R. Bengough

Mr. Percy R. Bengough, President of the Trades and Labour Congress of Canada stressed the urgency of the times, and the grave period in world history facing the people of the free world. He urged Canadians to "stay together in the common interest whatever incidents or events may tend to divide us." People all over the world want peace, and it is only through international co-operation that this can be obtained, Mr. Bengough said, but there are those who do not want peace, and "are seeking to use the misery of depressed peoples as the medium to bring about their complete enslavement." He warned against those forces at work in Canada who would destroy our freedom and our free organizations.

"The Trades and Labour Congress of Canada has taken a firm stand against all Communists, their fellow travellers and sympathizers," Mr. Bengough said, and they were not wanted. However, he pointed out that this policy was not a "witch hunt;" these measures were not taken out of fear; but because labour understood the methods of the Communists, and would not allow them to use the labour movement to destroy itself.

Mr. Bengough then praised the increasing solidarity of organized labour in Canada. He said that the current campaign of labour for the reimposition of price controls was both a historic and necessary event. "The encouraging feature of it is that organized labour, however many houses it may be divided into, can find common ground in the face of a common threat and meet adversity together," he said. Price control is necessary to protect the standard of living of Canadian workers, Mr. Bengough said, and his organization wants prices negotiated in the same manner as wages.

As a means of defeating Communism, Mr. Bengough urged increased aid to the under-developed areas of the world, and the protection of economic and social standards on the home front for all, regardless of class, creed or vocation.

A. R. Mosher

Stating that "the outlook for the New Year is far from bright," Mr. A. R. Mosher, President of the Canadian Congress of Labour, warned against closing "our eyes to the seriousness of both the national and international situation." Such a policy would only serve to create a false sense of security anl lead to wrong and unwise decisions, he said. On the other hand, Mr. Mosher warned against undue pessimism or a feeling of helplessness because of the disturbed situation.

Speaking of Communist aggression in Korea, and the attempt by the United Nations to bring about peace, Mr. Mosher said, "the high hopes which accompanied the establishment of the United Nations have not been realized but we may take some comfort from the thought that the situation would be much worse if the United Nations had not been established." He emphasized Canada's contributions to the United Nations, and described Canada as "comparatively one of the most fortunate countries in the world. . . ."

Mr. Mosher urged Canada to be prepared to meet all its obligations in the international field, and to "make the utmost use of our resources, and face our difficulties as a united people." However, these responsibilities in the international field "do not excuse our failure to take whatever steps are necessary to protect, if not improve the standard of living of our people," he said.

One of the big domestic problems of the moment is that of price control, Mr. Mosher said. He deplored the increase in the cost of living and in rents since the end of price control in 1946, and urged the re-imposition of these controls to halt what he called "wholly unjustified" price increases in recent months which have "nullified any wage increases obtained."

Gérard Picard

On behalf of the Canadian and Catholic Confederation of Labour, Mr. Gérard Picard, the General President, expressed his organization's wishes for a happy 1951 to the people of Canada. "It is my wish that our trade union movement may experience during the year 1951, an expansion worthy of the doctrine it upholds and consistent with the legitimate aspirations of the working class," he said.

Mr. Picard extended the good wishes of the CCCL to all the Canadian labour organizations, and expressed the hope that "in spite of the dark threats now hanging over us," the New Year will find "men of goodwill" attempting to bring about "increased justice for all."

Notes of Current Interest

Introduction of old age security plan proposed

A Conference of Federal and Provincial Governments was held in Ottawa beginning December 4. The principal subjects discussed were fiscal matters and old age security.

In his opening remarks the Chairman of the Conference, Rt. Hon. L. S. St. Laurent, Prime Minister of Canada, stressed the changes in Canada's national outlook that had occurred since the Conference of 1945.

At that time, he said, "We had high hopes that the foundations were being laid for a secure and lasting peace and we were thinking primarily not in terms of national security but in terms of maintaining employment, prosperity and social security in our own country. We all wanted, indeed we were all resolved, to avoid if at all possible the economic and social frustration and disappointments which had followed the first world war and which made the decade of the thirties such a grim memory for so many of our people.

"Unhappily today our main preoccupation is not and cannot be with the maintenance and expansion of prosperity and security within our own country, though these continue to be our constant objectives. Our main preoccupation is for the security of our country and its people, and our only real hope of that security lies in the prevention of another world war. We have been driven inexorably to the conclusion that the only way those who wish to prevent war can prevent it is by preparing to resist aggression—and preparing to resist it successfully."

On the question of fiscal arrangements, the Prime Minister said that the Federal Government was prepared "to enter again into so-called tax rental agreements with all provinces in terms similar to, though not identical with, the agreements now in force with eight provinces."

As regards old age security, Mr. St. Laurent recalled that at the last regular session of Parliament, a joint committee of the Senate and House of Commons, representative of all parties and all sections of the country, presented a unanimous report in favour of a universal federal old age pension of $40 per month for those aged 70 and over, to be financed in the main by contributions, and pensions of the same amount to those in need between ages 65 and 70 financed on a 50-50 basis by the Federal and Provincial Governments.

"In the light of the widespread approval of that report," Mr. St. Laurent said, "the Federal Government is prepared to accept the general lines of its recommendations and to propose them to the Conference as a basis for joint action. The general lines of the parliamentary committee's report resemble closely the proposal made at the Conference in 1945.

"The implementation of a scheme along these lines will involve a substantial increased expenditure of the order of $250,000,000 by the Federal Government, and the parliamentary committee recognized the necessity of devising some method of raising the necessary sum by appropriate contributions. The working out of a precise method of contributions will be a federal responsibility once the necessary constitutional jurisdiction is vested in Parliament.

"The parliamentary committee recognized the necessity of a constitutional amendment to give the federal authorities the jurisdiction to establish a contributory system of old age security. Before seeking such an amendment, the Federal Government is of the opinion that we should have the unanimous agreement of the provincial authorities.

"Of course such an amendment should not deprive any province which wished to do so of the right to add supplements to the federal or the joint pensions.

"Should unanimous agreement to such a proposed amendment be achieved, the Federal Government will be prepared to take the steps necessary to implement its part of an old age security plan along the lines recommended by the parliamentary committee.

"This decision respecting old age pensions was not taken without careful consideration of its financial and economic implications. There is a case for withholding action until the present inflationary pressures and tax requirements have been eased. On the other hand, the provision of a comprehensive system of old age security is a matter of the highest social priority which cannot be postponed indefinitely. It will be the aim of the Federal

Government to finance the scheme in such a way as to minimize the inflationary effects."

Following Mr. St. Laurent's remarks, and those of several members of his Government, the Premiers of the Provinces each made general statements of their views.

The discussions were then continued in committees which met in camera.

At the conclusion of the Conference the Prime Minister issued the following press statement:—

The Conference discussed—

1. The offer of the Federal Government for new tax agreements;

2. The offer of the Federal Government respecting old age security;

3. A Provincial proposal for an amendment to the Constitution to permit the provincial legislatures to levy an indirect sales tax at the retail level.

It was agreed that the proposed amendments to the Constitution regarding this indirect tax and regarding old age pensions should be drafted by the Department of Justice and submitted to the Provincial Governments for early consideration;

That a continuing committee should be set up to consider the character of legislation which would be appropriate respecting persons between the ages of 65 and 69 and to what groups thereof and under what conditions it should be made applicable in each Province;

That the continuing committee should be under the Chairmanship of the Minister of National Health and Welfare and should be brought together as soon as Provincial decisions had been reached on the constitutional amendment;

And that the Provincial Governments would consider the proposal for new tax agreements and indicate their respective positions at a later date.

It was also decided to suspend the further deliberations of the Federal-Provincial Conference on Constitutional Amendment and of its Continuing Committee of Attorneys-General pending consideration of the tax agreements and related matters. Once these have been disposed of, the Committee of Attorneys-General will resume its deliberations at the earliest convenience of the Federal and Provincial Governments.

"Colombo Plan" for Asia

A comprehensive six-year program for economic development in South and Southeast Asia was revealed on November 28 in a report published by seven member-countries of the Commonwealth — Australia, Canada, Ceylon, India, New Zealand, Pakistan and the United Kingdom. This program is designed to raise production and living standards and thus promote economic and social stability in the area.

Development projects are blue-printed for India, Pakistan, Ceylon, Malaya, Singapore and British North Borneo. The plan attaches great importance to bringing in other countries of the area and to putting the whole program into a world context:

"The need to raise the standard of living in South and Southeast Asia is a problem of concern to every country in the world, not only as an end in itself, but also because the political stability of the area and its economic progress are of vital concern to the world."

The report shows how crucial this area is to a prosperous world trade. The effects of destruction and sacrifice during and since World War II have been grievous, despite the strenuous efforts already made towards recovery.

The area as a whole has 570 million people, of whom 446 million live in Commonwealth countries. With a rapidly growing population, the standard of living —already low—is in danger of falling still further unless rapid steps are taken now to widen the horizons of economic development.

The target of the six-year development program is to increase land under cultivation by 13 million acres, to produce 6 million more tons of food grains, to increase by 13 million acres the land under irrigation, and to increase electric generating capacity by more than 1 million kilowatts.

The "Colombo Plan"—as it is popularly known—began in January 1950 at a meeting in Colombo, Ceylon, of Cabinet Ministers representing the Commonwealth countries. At a second meeting in Sydney, Australia, in May, the group decided that a start on the problem of relieving the poverty and underdevelopment of this area could be made by each country drawing up a realistic assessment of what it could do in six years on the assumption of co-operation both inside and outside the Commonwealth.

At a further meeting in London these separate programs were brought together. The meeting undertook a careful study of the problem as a whole and of its importance to a peaceful world based on freedom and adequate living standards. The conclusions of the conference are presented in the report now published.

Essential to the program is an increased supply of skilled manpower. The Governments therefore agreed at their Sydney meeting to provide finance up to £8 million ($22·4 million) to set up a Council for Technical Co-operation, with headquarters at Colombo, which would intensify

the training and exchange of skilled technicians and would co-operate with other agencies in this field, such as the technical aid program of the United Nations and the point-four program of the United States.

The report details the development already in progress and emphasizes that the new programs cannot succeed without substantial new capital investment. It estimates that the programs outlined would cost about £1,900 million sterling (equivalent to $5·2 billion) over six years, of which £785 million ($2·2 billion) would be found internally, while the balance of £1,085 million ($3 billion) would have to come from outside.

Out of £1,085 million of foreign exchange needed to further the plan, £246 million, or nearly one-quarter, would be provided in the form of the release by the United Kingdom sterling balances owned by the countries concerned. The Commonwealth Governments are considering how far their countries can help financially in various other ways.

At the same time, says the report, the task of providing this financial support cannot be tackled by these Governments alone. If the program is to be carried out in full, the co-operation of other Governments, of organizations such as the International Bank for Reconstruction and Development, and of private investors in other countries will be necessary.

Of expenditure planned under the programs 32 per cent would be devoted to agriculture (including multi-purpose projects of flood control, irrigation and hydro-electric power), 34 per cent to transport and communications, 6 per cent to industry and mining and 18 per cent to urgently needed improvements in educational and health facilities and other social projects.

Emphasizing the importance of getting the full program under way urgently, the report concludes:—

"Without external financial assistance something will be done. But it will be done at a much slower rate than would be possible if external finance were provided.

"And speed is necessary. In a world racked by schism and confusion it is doubtful whether free men can long afford to leave undeveloped and imprisoned in poverty the human resources of the countries of South and Southeast Asia which could help so greatly, not only to restore the world's prosperity, but also to re-dress its confusion and enrich the lives of all men everywhere."

Unemployment benefits for Special Forces Veterans

Veterans of the Special Forces will be entitled after discharge to unemployment insurance benefits, based on the period of their service, the Hon. Milton F. Gregg, Minister of Labour, has announced.

The Minister stated that a recent Order in Council provides for payment of these benefits to discharged members of the three Special Forces.

The Government will pay unemployment insurance contributions on behalf of a person serving in the Special Forces for the whole period of his service up to a maximum of five years' contributions. These will include both the usual employer's and employee's contributions at a standard weekly rate of 48 cents each, entitling the veteran to a weekly benefit of $14.40, or $18.30 if he has a dependent.

If the contributions made on behalf of a veteran who has served three months or more, together with any contributions he made before he enlisted, are not sufficient to entitle him to 90 days' benefit, the Government will make up the necessary extra contributions. Thus, every veteran will be entitled to protection against unemployment for at least 90 days, providing he has served the minimum of three months in one of the Special Forces.

This is basically the same unemployment benefit protection as that provided for World War II veterans.

Joint labour campaign for price and rent controls

Canada's four major labour organizations announced early in December the launching of a joint nation-wide campaign for the imposition of price controls and the retention of rent controls. The four organizations are the Trades and Labour Congress of Canada, the Canadian Congress of Labour, the Canadian and Catholic Confederation of Labour, and the Dominion Joint Legislative Committee of the Railway Transportation Brotherhoods.

The announcement, which followed conferences between these organizations, marked the first occasion in Canadian history in which all major labour groups have joined in such an undertaking.

The formal statement issued jointly by Percy R. Bengough, A. R. Mosher, Gérard Picard, and A. J. Kelly, heads of the respective organizations, follows:—

"The Trades and Labour Congress of Canada, the Canadian Congress of Labour, the Canadian and Catholic Confederation

of Labour, and the Dominion Joint Legislative Committee of the Railway Transportation Brotherhoods are convinced that the most pressing problem facing all Canadians today is the continuous increase in prices. We have noticed that the cost-of-living index as of November 1 remained unchanged from the previous month. This index figure, however, relates to prices in October. Wholesale prices in most lines including food products advanced sharply during November. We cannot, therefore, ignore the continued trend toward further increases in prices paid by consumers. Coupled with this is the danger of early removal of all remaining rent controls.

"The repeated appeals made by all of our organizations individually having failed to impress the Government with the need for immediate price control measures, the four major trade union centres now are inaugurating a jointly-sponsored nation-wide campaign. This campaign will enlist the participation of our more than one million members and their families and we are confident that our campaign will also enjoy the support of the Canadian public as a whole in our efforts to protect their living standards.

"The four trade union centres at the end of the war urged that price controls be maintained and at no time since have we retired from that position. We have always been unanimous in saying that the immediate result of the removal of controls would be the sky-rocketting of prices making it more difficult for average Canadian families to meet their household requirements and maintain themselves in decency and dignity. We were repeatedly told by spokesmen for the Government, however, that once price controls were removed prices would level off and automatically adjust themselves.

"Our warnings went unheeded. The ill-timed removal of price controls led to an alarming increase in the price of all commodities, an increase which is still continuing. The effectiveness of control measures is well illustrated by the Government's own figures. During the war under controls the cost-of-living index rose only 5·0 points between December, 1941, and April, 1946. Since April, 1946, when controls were removed, the cost-of-living index has shot up 50 points from 120·8 to 170·7 on November 1, 1950.

"Statements to the effect that wage increases are the cause of higher prices are misleading. Since the removal of controls, prices have been free to rise at the will of the employer. Wages, on the other hand, can only be adjusted by negotiation, conciliation or even arbitration.

"The impact of higher prices is being felt in the living standards of almost every Canadian family. Now they also face the threat of higher rents with the removal of remaining rental controls. The relationship of rent to the average family budget is already greatly out of proportion. Rents have increased with the consent and approval of the Government to the point where the monthly rental of a home constitutes an unduly heavy burden on the average family.

"Removal of remaining controls now would constitute an open invitation to landlords to increase rentals. Coming at a time when prospects point to a reduction in housing construction this situation adds further complications to Canada's already pressing housing problems.

"The burden of these conditions—both prices and rentals—has fallen on all sections of our population, and with particular severity on those with fixed incomes, such as our older citizens who are dependent on pensions. Our efforts are directed at providing relief for the Canadian people generally. To this end we propose enlisting active support of our entire membership and organizations representing all sections of the Canadian public in this campaign."

On December 15 the four labour leaders issued a further statement repeating their demand for price controls in the light of action taken in the United States.

B.C. judge refuses injunction against TLC officers

On November 16 Mr Justice Wood of the Supreme Court of British Columbia dismissed an application of the suspended executive and seventeen members of the Vancouver Civic Employees' Federal Labour Union, Local 28, for an interim injunction to restrain Carl E. Berg and Thomas Gooderham of the Trades and Labour Congress of Canada from organizing a new local union among certain employees of the City of Vancouver. Local 28, chartered by the Trades and Labour Congress of Canada, and certified by the British Columbia Labour Relations Board as the bargaining agent for a group of Vancouver civic employees, has a membership of about 1,500.

In his reasons for judgment, Mr. Justice Wood outlined the chain of events which led up to the present difficulties. In September, shortly before the Congress' 1950 convention, the Executive Council of the Congress received a communication signed by some fifty members of Local 28 protesting against the way in which the union's delegates to the 1950 convention

had been elected, and against the way in which the business of the union was conducted. It was contended that the union was Communist-controlled. As a result the Congress refused to accept the credentials of the delegates, Phillips and Guise, and at the close of the convention, Berg, a vice-president of the Congress, went to Vancouver to try to bring about a satisfactory adjustment between the Congress and Local 28, without success. On October 30, the president of the Congress suspended Phillips and Guise as officers and members of Local 28, and early in November Berg and Gooderham began organizing another union for civic employees who wished to have nothing further to do with Local 28.

Among the affidavits filed on behalf of Berg and Gooderham is one by Samuel Lindsay, who was the president of Local 28 until his resignation was accepted on October 25. On the basis of this affidavit, which is quoted in his judgment, Mr. Justice Wood concluded that "the Labour Progressive Party seems to have control of Local 28." In the affidavit Samuel Lindsay stated that in October when efforts were being made to make a satisfactory adjustment with the Congress, Guise and Phillips had proposed to him that he inform the district Trades and Labour Council that Phillips would resign if Guise were given an opportunity to clear himself. He attended a meeting with Guise and Phillips and "was introduced to Nigel Morgan, Morris Rush and several other members of the Labour Progressive Party" who were not members of Local 28. The affidavit states: "Phillips asked Nigel Morgan to explain to me that I was not 'selling Phillips out' by telling the Council he would resign. Nigel Morgan explained to us all that, if losing Phillips would save Guise, then the Labour Progressive Party would not lose the union." Before any settlement was reached on these terms, Phillips had decided that he was not prepared to resign, and he and Guise demanded Lindsay's resignation and on October 25 called a meeting of the Shop Stewards and Executive of Local 28 and brought charges against him. "Plaintiffs Guise and Phillips were able completely to dominate the meeting and the members present approved the acceptance of my resignation and elected a trial committee."

It was after these events that Berg decided to provide another union for civic employees.

The ground for the application for an injunction to restrain him from doing so was that it is contrary to the constitution of the Trades and Labour Congress to set up a dual union hostile to and in competition with Local 28. On examining the constitution, Mr. Justice Wood did not find any clear and unambiguous statement to prohibit the proposed union. He did find "very definite provisions with regard to Communists and the Labour Progressive Party." Article 5, Sec. 5, reads in part:—

> No organization officered or controlled by Communists or members of the Labour Progressive Party, or any person espousing Communism, or advocating the violent overthrow of our institutions, shall be allowed representation or recognition in this Congress, or any organization chartered by it.

"It would seem, therefore," His Lordship stated, "that when it suits the plaintiffs to rely upon the provisions of the constitution they wish to do so, but they are not prepared to observe such terms as do not suit them." The plaintiffs, not having themselves observed the provisions of the constitution, which every member of Local 28 was in duty bound to observe, could not be said to come into court with clean hands, and accordingly were not entitled to remedy by way of an injunction. The application was dismissed.

A review of the Congress' relations with Local 28 appeared in the November 23 issue of the *TLC News*. It is stated that Vancouver civic employees were invited to sign cards which would show their allegiance to the Congress, their abhorrence of Communism, and their readiness to join a new local union "if such action was found finally to be the only effective solution to the current difficulties. . . . This however does not necessarily create a new local union of civic employees. Local 28 is still a chartered local union of the Congress although it has no executive and fourteen of its officers and members are under suspensions from the Congress and the Union."

Executive of CCL calls for national legislation

Meeting in Ottawa late in November, the Executive Council of the Canadian Congress of Labour issued a statement calling for national legislation covering minimum wages, hours of work and labour legislation. The Council endorsed a resolution proposing amendment of the British North America Act to pave the way for federal action on "all matters which are of common interest to the Canadian people and of national importance and character."

In particular the resolution proposed a national minimum wage act with a

minimum of 85 cents an hour; a national hours of work act providing for the 40-hour week, and a national labour code covering all industries.

Announcement was made of the formal affiliation of the American Newspaper Guild with the Canadian Congress of Labour.

Canadian officials on loan to ILO

The services of Brigadier John E. Lyon, of the Department of Labour, and of Dr. Edward P. Laberge, of the Unemployment Insurance Commission, have been loaned to the International Labour Office, to assist in the development of the expanded migration program being carried out by the ILO in Europe, Latin America and elsewhere.

Recently, governments in Western Europe made available to the ILO additional funds of nearly one million dollars to enable the International Labour Office to promote plans for a large-scale program of moving workers from areas of surplus labour to areas of labour shortages, or to under-developed areas. The ILO has been recruiting experts for the program from various countries.

Brigadier Lyon is Assistant Director of Canadian Vocational Training in the Department of Labour, and while with the ILO he will be advising on the development of technical and vocational education programs in Europe. It is expected that his assignment will be for one year. The ILO, as part of the above program, is assisting various countries in expanding their technical training programs to overcome labour shortages.

Brigadier Lyon was born in Ottawa, where he received his early education, later attending RMC at Kingston. For 28 years he was an Officer of Canada's Permanent Army, having served overseas in World War I. Retiring from the Army with the rank of Brigadier, he joined the staff of the Unemployment Insurance Commission in Ottawa seven years ago, and while with the Commission was active in arranging for the re-absorption of the armed forces into civilian employment at the end of the Second World War. In 1945 he became Assistant Director of Canadian Vocational Training, and in that post had a good deal of responsibility for the vocational training of veterans at the close of the Second War.

Dr. Laberge, who was one of the early senior officers with the Unemployment Insurance Commission, and who has for the past nine years been director of Technical Services there, will first go to the head office of the ILO in Geneva. Later he will be posted to Rome. His assignment is for a period of one year.

Dr. Laberge graduated from the University of Montreal with the degree of Doctor of Commercial Sciences in 1934. Previous to joining the Unemployment Insurance Commission he was with the Civil Service Commission at Ottawa, in the capacity of an investigator with the Organization Branch.

Reduced TCA fares for U.K. immigrants to Canada

Arrangements to bring immigrants to Canada via Trans-Canada Air Lines were announced on December 7 by the Hon. Walter Harris, Minister of Citizenship and Immigration.

Mr. Harris said that immigrants may now travel to Canada on TCA westbound flights from the United Kingdom at a cost to them not exceeding $160, the equivalent of the cost of tourist class passage by sea, the air line receiving the balance of the regular air fare from the Canadian Government.

This new move to stimulate immigration to Canada has been taken in view of the scarcity of available shipping on the North Atlantic; a factor which has prevented many prospective immigrants from coming to this country, the Minister stated.

Account of successful LMPC at Hamilton

An account of the functioning of a successful labour-management production committee, which tells the story of several specific problems and how they were handled, appears in the December issue of *Teamwork in Industry,* published by the Department of Labour.

The committee is in operation at the Barber Die Casting Company, Ltd., Hamilton, where the employees are organized in Local 4153 of the United Steelworkers of America.

The committee was formed in an unusual way in late 1948. The company and union had been in protracted negotiations over their first collective agreement. Management pointed out that it would be unable to grant and maintain the wage increase the union was demanding unless production increased. At this point it was suggested that an LMPC be organized as a means of raising the production level and lowering production costs. Both parties agreed.

While the maintenance of wage levels—strictly a collective bargaining question—figured prominently in the inception of this

committee, an unusual beginning for an LMPC, such matters have since had no place in the committee's discussions.

"Despite its out-of-the-ordinary beginning under conditions of stress, the committee proved itself a valuable asset right from the start," the article states.

The article then goes on to describe a series of instances in which the committee proved its usefulness, and to outline the manner of operation of the committee.

Ownership of manufacturing firms in Canada

Slightly more than 46 per cent of the 33,447 manufacturing establishments operating in Canada were under individual ownership in 1948, and 34·4 per cent were incorporated companies, according to the Dominion Bureau of Statistics. Partnerships accounted for 16·4 per cent of the total and co-operatives for three per cent.

Incorporated companies are by a wide margin the most important in the employment field, accounting for 87·5 per cent of the employees. Establishments operated under individual ownership provided employment for only 7·1 per cent of all employees, partnerships for 4·4 per cent, and co-operatives for the remaining one per cent.

Among Canada's 40 leading industries, non-ferrous smelting, production of automobiles, primary iron and steel, railway rolling stock, breweries, sugar refineries, and coke and gas plants, were entirely under incorporated companies. Incorporated companies also accounted for over 90 per cent of employment in pulp and paper, slaughtering and meat-packing, electrical apparatus and supplies, petroleum products, machinery, cotton yarn and cloth, rubber goods, sheet metal products, hosiery and knitted goods, agricultural implements, automobile supplies, iron castings, brass and copper products, synthetic textiles and silk, tobacco, cigars, and cigarettes, ship-building and repairs, paper boxes and bags, and confectionery and cocoa.

Firms under individual ownership accounted for as much as 10 per cent or more of the employment in only nine of the 40 industries. These were bread and other bakery products with 32·7 per cent, sawmills 31·2 per cent, planing mills, sash and door factories 19·6 per cent, flour and feed mills 17·6 per cent, printing and bookbinding 16·8 per cent, butter and cheese 14·0 per cent, women's factory clothing 13·4 per cent, furniture 11·5 per cent, and fish curing and packing 11·1 per cent.

Among the partnerships, those engaged in the production of furniture accounted for 10·6 per cent of the employees, sawmills 13·5 per cent, women's factory clothing 14·1 per cent, and planing mills, sash and door factories 11·8 per cent. Co-operatives in butter and cheese accounted for 21·9 per cent of the employees in the industry as a whole, and 13·9 per cent of those in stock and poultry feeds.

Individual ownership ranged from a low of 36·3 per cent in British Columbia to a high of 56·8 per cent in Saskatchewan, partnerships from 12·8 per cent in Quebec to 24·0 per cent in British Columbia, incorporated companies from 21·7 per cent in Saskatchewan to 39·9 per cent in Manitoba and 39·8 per cent in Ontario, and co-operatives from 1·3 per cent in British Columbia to 8·3 per cent in Prince Edward Island.

Survey of incomes in legal profession

The Dominion Bureau of Statistics recently released a reference paper on the results of a survey of incomes in the legal profession in Canada for the years 1946, 1947 and 1948. Conducted with the co-operation of the Survey of the Legal Profession, a body set up by the Canadian Bar Association to make a general investigation of the status of the profession in Canada, the survey covered all lawyers in the profession, including salaried lawyers working for the various governments. Statistics were obtained upon the earnings of approximately 7,200 full-time and 500 part-time lawyers.

Average professional earnings of all full-time lawyers, according to the survey, were $5,843 in 1948, an increase of 16 per cent from $5,031 in 1946. The highest average earnings were reported by partners in law firms, who earned an average of $8,943 in 1948. Salaried lawyers in government were next with $6,758, while salaried lawyers in law firms came last with an average of $2,934. Judges and other court officials, as well as lawyers in government departments, are classified as salaried lawyers in government. The majority of this group have been in the profession for a considerable period of time. On the other hand, salaried lawyers in law firms are usually young lawyers.

Regionally, the highest earnings of the full-time lawyers in 1948 occurred among Ontario lawyers, who reported an average professional income of $6,898, while Quebec notaries were lowest with $3,145. Two-thirds of the lawyers in 1948 were located

in centres of over 25,000. Lawyers practising in cities between 100,000 and 500,000 in population had the highest earnings in all three years, increasing their average incomes from $6,440 in 1946 to $7,923 in 1948. Lawyers in their fifties were the age group with the highest average earnings, approximately $7,800 in 1948. Lawyers in private practice earned their highest incomes after being in practice between 20 and 29 years, while the salaried lawyers showed maximum incomes after 40 years in the profession.

Among the specialized fields of law, corporations and finance were the most profitable with specialists in this category earning an average of $11,338 in 1948. In 1946 approximately 10 per cent or 622 lawyers earned incomes over $10,000, while approximately 16 per cent or 1,118 lawyers were in this income category in 1948. One-half of all full-time lawyers made under $4,403 in 1948.

One-third of all law-firms showed gross earnings of over $10,000 in 1948. Single person firms reported gross earnings that year of $6,342 and expenses of $2,696, while firms of six or more lawyers averaged a gross income of $122,825 and expenses of $38,622.

Old age and blind pensioners in Canada

The number of persons receiving old age pensions in Canada increased from 287,017 at June 30, 1950 to 292,701 as at the end of the quarter September 30, 1950. Ten years earlier, at September 30, 1940, the number of old age pensioners was 187,058.

The Federal Government's contributions under the Federal-Provincial scheme totalled $24,600,947.46 for the quarter ended September 30, 1950, as compared with $24,212,060.79 in the preceding quarter and $7,275,792.95 for the quarter ending September 30, 1940. Since the inception of the Act the Federal Government has contributed $683,552,063.69.

The average monthly pension in the provinces ranged between $34.54 and $38.35. In the Yukon Territory and the Northwest Territories the average was slightly higher. Ten years ago the range was between $11.25 and $19.12.

In only four provinces was the number of pensioners higher than three per cent of the total population.

In addition to the above, pensions were being paid to 10,880 blind persons as at September 30, 1950, as compared with 10,711 at June 30, 1950, and 5,684 at September 30, 1940.

The cost of pensions in respect of blindness to the Federal Government was $969,361.68 for the quarter ended September 30, 1950, and $951,768.10 for the quarter ended June 30, 1950. Since the inception of the Act, the Federal payments have totalled $20,945,994.18. The average monthly pension in the provinces was between $38.24 and $39.34. With only three blind pensions in the Yukon Territory and the Northwest Territories, the average was $40.

Booklet on organization for civil defence

A small booklet, pocket size, has been published by the Department of National Defence, in Ottawa, outlining the various steps to be taken in case of emergency. The purpose of this manual is to assist provincial and municipal authorities in planning and organizing for civil defence, but it may be of great interest to all Canadian citizens as well.

Valuable lessons for the future are derived from recent disasters, such as: Fraser Valley and Manitoba floods; Rimouski and Cabano fires.

Various forms of attack are described, followed by practical methods of civil defence; warning, dispersion, construction, black-out precautions, shelters, hospitalization, etc., etc., all of which would be most helpful to know in case of any emergency.

New consolidation of labour laws

Labour Legislation in Canada as existing December 31, 1948 has just been issued by the Department of Labour. Comprising 1,092 pages, it contains the text, in full or abridged, of all federal and provincial statutes directly affecting labour which were on the statute books at the end of 1948. Regulations made under the authority of the statutes are included in full or noted in summary form. This consolidation of Canadian labour laws is the fifth in a series, the previous editions covering the periods up to the end of the years 1915, 1920, 1928, and 1937. In the intervening years annual reports have been published covering only the legislation enacted during the year.

This volume will be a great convenience to anyone seeking to obtain a detailed knowledge of labour laws, as it contains under one cover the large body of labour legislation enacted by Parliament and the Provincial Legislatures between 1937 and the end of 1948, as well as the earlier Acts still in effect. Important legislation of this period includes the federal Unemployment

Insurance Act, the Vocational Training Co-ordination Act, and the Industrial Relations and Disputes Investigation Act. All the provinces passed new labour relations legislation. Laws providing for vacations with pay made their first appearance in Canada during this period, and several provinces enacted hours of work Acts of general application and extended minimum wage fixing to new groups of workers.

The report is thoroughly indexed, permitting ready reference to the subjects covered by the statutes, and facilitating a comparison of similar provisions in the various provinces.

Free distribution of the report is made to a limited mailing list including trade unions, educational bodies, and employers' associations. The regular price is $2, and copies may be obtained from the Department of Labour.

A limited supply of the 1937 consolidation and subsequent annual reports is still available. These earlier reports, which are now free on request, would be of use to anyone interested in tracing the historical development of labour law.

Changes proposed in Ontario workmen's compensation

The report of Mr. Justice W. D. Roach who for the past year has been conducting an inquiry into the operation of the Ontario Workmen's Compensation Act (L.G., 1949, p. 1514) was presented to the Ontario Government early in December. Pointing out that "it is infinitely more important that, where possible, an accident should be prevented than that it should be permitted to occur and the victim be compensated", the Commissioner proposed that accident prevention should be brought under the direct jurisdiction of the Workmen's Compensation Board, as in Alberta and British Columbia. Eight associations of employers grouped together for the purposes of accident prevention work and approved by the Board and Government are currently functioning in Ontario, but, the Commissioner stated, there is no statutory obligation on any of these associations to report to any one or even to continue to function. His Lordship also considered that there should be more active participation of labour in any organized system of accident prevention.

Other recommended changes were that the waiting period before compensation is payable should be reduced from the present seven days to four working days, and that the maximum yearly earnings on which compensation is based should be increased from $3,000 to $4,000.

The report will be dealt with more fully in a future issue.

Pension plans in British industry

Although under Britain's social security scheme, retirement pensions are provided for all workers, this has not ruled out privately financed plans in industry, providing pensions to supplement the "national" pension.

According to *British Labour and Industry,* it is estimated that 8,000 employer plans, covering 2-2½ million workers, are at present in operation, with assets of nearly £700 million. In 1936, the last year for which official statistics were published, 6,544 employers had pension schemes covering a total of 814,000 employees.

Privately financed pensions are entirely separate from social security pensions. The plan reported as the most favoured is the contributory plan, because of the higher benefits and "because it carries the fullest feeling of security," though there are a number of non-contributory schemes in effect.

"Although future service benefits are the basis on which a staff pension plan rests, the position of the existing staff is generally the problem from which the employer who is contemplating a plan starts," the report says. The cost of providing benefits for past service is generally undertaken by the employer alone, although in many plans part of the cost is spread over the contributions payable by present and future employees. A common compromise is to provide past service pension at half the rate applicable to future service pension.

The retirement age is usually 65 for males and 60, or sometimes 55, for females. Individuals may, however, by mutual agreement, stay at work longer without prejudice to their pension rights. On the other hand, break-down pensions of amounts proportionate to the length of service are given in cases of ill-health retirements. (The national insurance plan encourages workers to stay on beyond the retiring age, and offers incentive through increases to the pension when ultimately taken.)

Rates of pension vary widely between firms but the maximum is rarely more than two-thirds of the salary, usually calculated on either the salary service method or the money purchase method. Manual workers' pensions are often at a flat rate.

Provision is made for special cases, such as death in service, death after retirement on pension, and voluntary or compulsory withdrawal.

The principle of "transfer value" has not yet been accepted by British industry, it is stated.

In the matter of taxation, the funds of pension plans are accorded considerable privileges, it is noted. In particular, investments of privately administered plans, and also employer and employee contributions, can be approved, subject to certain conditions, for full exemption from income tax. "The total exemption from income tax enjoyed by a privately administered fund is one of the main considerations which lead many firms of any magnitude to prefer that method of setting up a scheme to that of administration through an Insurance Office," it is observed.

The introduction of the National Insurance Act in 1946, requiring considerable higher contributions from both employers and workers, has led to less revision of private schemes than was at first thought likely. Most private schemes had made provision for adjustment, if desired, by scaling down contributions and benefits and, where the trustees of a fund have no legal power to scale down contributions, the Minister of National Insurance has the power to approve such modifications.

Guaranteed work week in Britain

"In the negotiation of union contracts since the war, there has been a firm approach in Britain toward the principle of the guaranteed week, although, as yet, no uniform conditions have been laid down," an article on the guaranteed work week in *Labour and Industry in Britain* states.

Between eight and nine million wage-earners in Britain—one-sixth of the total population—are covered by some form of guaranteed weekly wage, based either on collective bargaining or on minimum wage orders, according to the article.

The guaranteed work week, the article explains, has resulted largely from the Essential Work Orders, a wartime measure which made it a condition of "freezing" that the worker receive a minimum weekly wage, even if work was not available.

While the basic principles of the collective agreements and wage orders are similar to those embodied in the Essential Work Orders, there are important differences, it is pointed out. In many cases, the new guarantee does not amount to a full normal week's wages but only to a proportion of it. Also, the pieceworker's guarantee, which under the Essential Work Orders was on a daily basis, is now on a weekly basis; and provision is made in many cases for suspension of the guarantee when work is not available or is curtailed for such causes as strikes, shortages of raw materials, fuel or power, breakdowns of machinery, etc.

Full normal weekly hours are guaranteed in less than half the industries concerned, and in the remainder the guarantee generally ranges from two-thirds to three-quarters of the full weekly hours or ordinary weekly wages.

In general, title to the guarantee is not specifically limited to particular occupational classes or to workers of a particular age or sex. The main qualification for entitlement is that the worker should be capable of and available for work during the normal working hours. This is usually linked with a requirement that he should also be willing to perform any reasonable alternative work when work in his usual occupation is not available. Absenteeism in many cases involves forfeiture of claim or a reduction on the guaranteed period.

The accompanying table gives brief particulars of the extent of the guarantee in a selection of industries:—

The Guaranteed Work Week in Britain

Industry	*Extent of Guarantee*	*Normal Working Week*
Agriculture	Full normal week	47 hours
Coal mining	Full normal week	Five shifts of 7½ hours plus one winding time for underground workers
Railway service Road Passenger Transport	Full normal week	44 hours
Wool Textiles Mfg.		
(Yorkshire and Scotland)	75 per cent of full normal hours or wages	45 hours
(West of England)	Full normal week	45 hours
Building	32 hours	44 hours
Heavy Steel Mfg.	4 shifts or days in week	44 hours for day workers (8 hours per shift for shift workers)
Dock Labour	Set payments	44 hours

British workers increase output

Productivity in Britain has been steadily increasing during the past two years, the Committee on Industrial Productivity notes in its second report, presented to Parliament last summer. The interim index of production shows an increase of about 11½ per cent between the second half of 1947 and 1949.

During the same two-year period the number of workers in the industries covered by the index increased by just over 1½ per cent. "Although a number of other factors have to be taken into account," the Committee observes, "it is, therefore, reasonable to assume that the greater part of the increased production has arisen from an increased annual output per worker."

The Committee on Industrial Productivity was set up by the Lord President of the Council and the Chancellor of the Exchequer in December, 1947, to follow up certain lines of action recommended by the Advisory Council on Scientific Policy, for securing short-time results in increasing national productivity. The main work of the committee was conducted through four "Panels," which dealt specifically with (*a*) Technology and Operational Research; (*b*) Import Substitution; (*c*) the Human Factors affecting Industrial Productivity; and (*d*) Technical Information Services.

Commenting on the fact that up to a few years ago the main emphasis in increasing production was laid on the working population—"a process which is now recognized to have about reached its practical limits," the Committee states: "There is now a wider acceptance of the propositions that expanding national wealth and prosperity are to a large extent dependent upon the greater and more intelligent application of science to production and distribution, that it is vital to aim at a steadily increasing average yearly output per person employed as well as an increase in total production, and that an objective study of human factors as they affect industry can help, in the short as well as in the long run, to achieve a steadily rising output."

Doubt is expressed by the Committee as to whether sufficient recognition has yet been given to the human factor in industry. It is noted that reports are expected shortly from the Panel on Human Factors in Industry on a number of research projects connected with the human aspects of the production question, and that the Medical Research Council and the Department of Scientific and Industrial Research are at present working out a scheme by which wider programs of work in this field can be undertaken.

In the initial work of bringing together different sections of the community able to make some contribution towards increasing productivity, the Committee expresses the belief that it has played a useful part, but considers that the main responsibility for studying these problems should now be placed on "more specialized bodies and on those in day-to-day touch with particular industries." Reference is made to the work of a number of "competent" organizations which have become increasingly active in promoting production, among them the Anglo-American Council on Productivity, the Trade Associations for engineering industries, which have worked out mutual aid schemes or taken other action to increase efficiency and reduce costs, and the General Council of the Trades Union Congress, which has promoted conferences and has decided to establish a productivity department. Reference is also made to the progress of joint consultation in industry.

In conclusion, the Committee recommends that the tasks entrusted to it "can in future be better performed by other existing bodies," and that it be discharged. The Committee has accordingly since been dissolved, arrangements having been made for the continuation under other auspices of some of its activities.

Survey of women in higher-level positions in U.S.A.

The extent to which higher-level jobs are open to women, the qualifications demanded, and the background and experience of the women holding such jobs, have been the subject of a recent study by the Women's Bureau of the United States Department of Labour. The results of the survey have been published in a report entitled, *Women in Higher-Level Positions.*

The study was limited to women holding positions of responsibility in four fields of work: department stores, home offices of insurance companies, banks, and manufacturing plants, employing large numbers of women, in the Boston-Hartford area, Philadelphia and Chicago. A total of 237 firms were covered, representing 345,000 employees.

Significant numbers of women were found to be holding higher-level positions in all four fields covered by the survey, but only in department stores was there an even distribution of such jobs among men and women. In the home offices of insurance companies, women held one-fifth of

the high-level positions; in the banks and manufacturing firms, no more than 15 per cent of the higher-level positions were held by women.

In no category of business and industry was the ratio of women to men in higher-level positions comparable to the ratio of women to men in total employment. In department stores and in insurance companies, women constituted roughly two-thirds of all employees, and in banks and manufacturing nearly one-half of all employees were women.

The women in all industries who had reached the higher-level jobs were an older group than women workers in general. Only three per cent of the women in such positions for whom records were obtained were under 25 years of age, whereas 27 per cent of all women in the labour force were under 25. Three-fourths were 35 years or over, in contrast to about half of all women in the labour force.

The women holding higher-level positions were, in large part, women with extensive work experience. In all fields about two-thirds had been working for more than 15 years. In the banks nearly two-thirds had been working for over 20 years, while in department stores less than one-third had been working that long.

The women covered in the survey were not predominantly college-educated. In department stores nearly half of the women, and in the other industries considerably more than half, had had not more than a high school education. Substantial proportions had attended in-plant training courses. Specialized training, it is observed, would appear to play an important role in fulfilling requirements for higher-level positions, and is undoubtedly useful in supplementing a limited general education.

"There is evidence," the report says, "that the attitudes or limitations of women themselves may be no less an obstacle to advancement than traditional attitudes of management. The survey reveals that women themselves did not always have the necessary requisites for further advancement, nor did they always take advantage of the opportunities for special training offered them. The study also indicates that women of ambition and ability who had performed outstanding service were often advanced in the face of a general company policy unfavourable to women."

The Women's Bureau, earlier, made an analysis of salaries of women in the United States Federal Service. A brief review is contained in the October, 1950, issue of the Labour Gazette, p. 1633.

U.S. law to improve education of rural children

With a view to ultimately eliminating the disparity which has long persisted between the educational levels of urban and rural children, the United States Department of Labour has in recent months issued several leaflets urging public co-operation in that matter.

Sometime during the school year, about 180,000 youngsters under 16 years of age are engaged in paid work on commercial farms throughout the country, according to the Department's estimates. As a result, they do not benefit from the formal education to which they are entitled. It is anticipated, however, that recent Federal protective legislation will go far in keeping children out of farm jobs during school hours.

In easy-to-read terms, one leaflet explains the amendment to the Fair Labour Standards Act providing a 16-year minimum age for hired work in agriculture during school hours on farms whose products go into interstate commerce. This includes the farmer who sends his product outside the State, and the farmer who delivers his product to another person in the same State who will send the product outside the State, whether in its original form, processed, or as an ingredient of another product.

On the other hand, it does not provide any minimum age for employment on the parent's farm, nor any minimum age for employment before or after school hours on any school day—or at any time on school holidays and during school vacations.

The need for this legislation is indicated by the fact that illiteracy is over twice as great among rural as among urban dwellers, the Department states. Moreover, three times as many farm children as city children are not enrolled in school. And farm children who do attend school do not progress as far as city children. In 1940, half the rural dwellers 20 to 24 years of age had completed only eight years of formal education as compared with 12 for urban persons in the same age category.

A second leaflet entitled *Labour and the Law*, by U.S. Secretary of Labour Maurice Tobin, deals with the clauses of the amended Fair Labour Standards Act, effective in January 1950, and their significance in protecting young people.

The Secretary of Labour draws attention to actual accidents which maimed or killed young persons under 16. Until the passage of the amendment coverage extended only to children working in establishments producing goods to be shipped in interstate or foreign commerce. It did not apply to firms

involved in transportation, communication, warehousing and storage, and construction, for while they were engaged in interstate commerce they did not produce goods that were shipped. It was in such types of employment that many fatal and serious accidents occurred.

Now, these industries cannot legally employ children unless they are old enough for the job.

Employer-union liability established by Board

By a vote of 3 to 2, the National Labour Relations Board of the United States decided recently to continue its policy of holding both the employer and the union "jointly and severally" liable for back wages, when an employer discharges a worker, at the union's insistence under an illegal union-shop agreement.

The majority members of the Board held that the policy followed in the decision was "founded upon a basic principle well established in the decisions of this board and accepted by the courts. Whatever the situation may be, the fact remains that, in the ultimate analysis, it is the employer, and only the employer, who controls the hiring and discharge of his employees."

The majority further held that "even under joint and several liability a union always faces the possibility that it may ultimately have to pay the total liability."

Meeting of unions expelled by CIO

According to the *Labour Relations Reporter* for December 4, a number of unions expelled from the Congress of Industrial Organizations for Communist activity (L.G., April, 1950, p. 438, Nov., p. 1788) set up an "informal working alliance" at a meeting in Washington on November 18, and indicated that further plans on financing and direction of the group's program will be made soon. Harry Bridges, head of the International Longshoremen's Union, a sponsor of the conference, "guessed" that the unions involved had around 500,000 members. Besides Mr. Bridges' union, the organizations represented were the Mine, Mill and Smelter Workers; the Marine Cooks and Stewards; the Fur and Leather Workers; the American Communications Association; the newly organized Distributive, Processing and Office Workers; the United Electrical Workers; and the United Public Workers.

Safety provisions in union agreements in U.S.A.

Clauses dealing with employee safety were incorporated in 51 per cent of 2,411 labour-management contracts in effect in the United States during 1950, recently examined by the United States Bureau of Labour Statistics. These "safety clauses" covered more than $2\frac{1}{4}$ million workers in 20 major manufacturing industries and 10 non-manufacturing groups.

In manufacturing alone, 56 per cent of the agreements included safety provisions. Such clauses were most common in petroleum and coal products and transportation equipment agreements. In non-manufacturing, 40 per cent of the firms covered by the survey contained safety provisions. These were concentrated in two major industry groups—electric and gas utilities, and mining and crude petroleum.

Safety provisions in the agreements studied were incorporated in various types of clauses. Labour-management committees to promote safe operations in the plant were established in 28 per cent of the 1,232 agreements with safety provisions; management and labour jointly, or management solely, pledging generally to promote the safety of workers on the job. Others listed responsibilities and rights of management, and of unions and employees, in maintaining safe working conditions.

A number of contracts combined several methods of dealing with the problem of workers' safety. For example, it was not uncommon for contracts to provide joint labour-management committees while also listing management responsibilities.

In 270 agreements the functions of safety committees were defined. These were predominantly of an advisory nature. Under certain provisions, the committees were instructed to consider and make recommendations on any or all plant health and safety problems. Under others, the committees were required to inspect plants for safety conditions and sanitary facilities; investigate accidents and analyse their causes; make recommendations on installation of safety devices, etc.

About one in every 10 agreements providing for safety committees specified compensation for union representatives, for time lost from their regular jobs through attending meetings; one in every 20 stipulated that only time spent on plant inspections would be paid for.

Frequency of meetings was stated in about one-fourth of the agreements, monthly meetings being most common.

In contracts in which safety committees were not specified, the general type of safety provision was a simple statement of the intent of management, or management and union, to eliminate health-safety hazards in so far as possible.

The most frequent type of provision dealing with rights and responsibilities of employers required the installation or furnishing of safety devices, such as guards on machines, fire-fighting equipment, etc. Other types of clauses contained provisions as follows: (1) Employer to maintain sanitation facilities; (2) Employer to maintain first-aid facilities; (3) Employer to provide protective wearing apparel; (4) Employees to observe safety rules; (5) Right of employees to refuse to work on unusually hazardous jobs; (6) Employee to bear portion of costs of safety equipment.

Curative Centre helps to rehabilitate injured workers

Through the work of the Rhode Island Curative Centre, many badly injured workmen have averted the tragedy of permanent invalidity and now lead active useful lives, according to a booklet on the Centre prepared by the Rhode Island Department of Labour.

Because of the large number of industrial workers in the State's labour force and the increasingly important place of rehabilitation in medical practice, the Rhode Island legislature established the Centre in 1943 as a division within the State Department of Labour. Since its opening in 1945, the Centre's facilities have been available to men and women coming under the provisions of the Workmen's Compensation Act.

The Centre, which offers psychotherapy, physical therapy and occupational therapy, has no patients of its own. During the period of attendance every patient is considered to be under the care of his own physician, to whom progress reports are sent periodically. There are no bed patients either, each person travelling daily to the Centre to receive his treatment.

Occupational therapy is an important factor in rehabilitation, the booklet points out. The Centre is equipped with tools and machines and other devices that help to strengthen weakened muscles and stiff joints. By working in wood, creating such things as toys and furniture, the patient gains confidence in his ultimate recovery.

Also an essential aspect of the Centre's program is recreational therapy whereby the patient, by joining in pastimes with other patients furthers the social phase of his rehabilitation. The final phase of treatment consists of active exercise, usually in the Centre's gymnasium, to develop the injured area of the body.

Before the patient is completely recovered, he discusses his personal problems with the executive assistant who acts as a liaison officer between the Centre and the general public. If it is found that the worker has not been given sufficient scope to utilize his talents on his former job, an opportunity is afforded him, during the treatment period, to further his education in preparation for a better position in life.

Princeton makes survey of labour relations in department stores

The last decade has seen marked changes in labour relations and personnel administration in department stores, according to a report of the Industrial Relations Section, Department of Economics and Social Institutions, Princeton University, which conducted a survey of the industry. The report is entitled *Personnel Administration and Labour Relations in Department Stores, An Analysis of Developments and Practices.*

The initiative to change has come from two sources; management's increasing awareness of the general progress in American industrial relations practice; and labour organizations through which employee wants and opinions have gained more articulate expression, the report states.

For many years department stores held a somewhat unique position with respect to personnel administration. The highly competitive nature of the business created a situation in which the principal concern was the careful selection of employees and their training in salesmanship and merchandise information. "Prior to 1930," the report discloses, "employee organization for bargaining purposes was almost nonexistent. White collar employees, especially in occupations with a high percentage of women workers, were traditionally unreceptive to unionization."

The depression of the early 'thirties and the National Industrial Recovery Act brought an increased awareness to retailers of the problems they shared with industrial employers. Subsequent federal and state labour legislation and the accelerated growth of unionism also affected retailers, and the recent war created problems concerning employment and wages. The extent to which managements returned to pre-war standards or adopted new policies

to meet the new conditions varied between cities and between individual companies, the report showed.

From 1935 to 1949, many new developments occurred in personnel policies and activities, in the way in which policies were determined, and in administrative organization and procedures. The most notable changes in personnel activities have been those related to unionization and collective bargaining. In contrast to former years when department stores were almost wholly unorganized, unions today at the most represent all their employees or at least are an indirect influence on personnel standards.

ICFTU endorses UN and ILO action on employment

The Emergency Committee of the International Confederation of Free Trade Unions has adopted a report entitled *For Full Employment, Economic Development, and Social Progress.* The report endorses reports on full employment adopted by the United Nations Economic and Social Council, and the International Labour Conference (L.G., Aug., 1950, p. 1157; Nov., p. 1874). It describes the adoption of the UN and ILO reports as making "a new chapter in international co-operation for the peoples of the world". The program of full employment is "a challenge to all people of good will and particularly to the organization of free labour everywhere, to work and fight for the realization of these lofty goals which the supreme economic and social organs of the world community have made their own," the ICFTU report states.

The ICFTU feels that the "need for action in achieving these goals is particularly pressing in the underdeveloped parts of the world", and that action to improve conditions in these countries "is of primary concern to the free international labour movement."

Noting that the UN and ILO resolutions had called upon all countries "to pursue systematic and effective" policies on full employment and economic and social improvements, the ICFTU said:—

> With all these measures recommended by the two international organizations we are entirely in agreement. We, therefore, whole-heartedly welcome the two full employment resolutions and give them our fullest support. We appeal to the governments of all free countries to honour the pledges which they have taken upon themselves by unanimously adopting the two resolutions. We call, in the first place, upon the free labour organizations in all countries to fight for the goals envisaged in the full employment programs of the United Nations and the International Labour Organization. We warn them from being deterred from this fight by the temporary improvement in employment conditions brought about by increased military expenditures for the defence against communist invasion and military threats. What the worker needs is permanent security of his job, not a security dependent on fortuitous events.

However, the ICFTU considers the measures taken by the UN and ILO as only the "first steps" in carrying out this program. The Federation states that the people of these countries cannot wait until the completion of studies for help. "The pressing need of immediate and sufficient international aid for the improvement of the lot of the underemployed and starving masses in the economically underdeveloped sector of the world, particularly, has not yet been reflected in concrete programs of immediate, effective action," the report declares.

The report urges that policies of full employment and social progress be carried out as quickly as possible in all countries, including any necessary legislative changes. Such policies should "be geared towards strengthening the consumers' purchasing power through higher wages, improved working conditions and fuller social security". To further aid this program, trade unions should be freed from all restrictions in those countries where legislation restrains the freedom of their action, or the governments have taken them under their "tutelage", and should be given an opportunity to co-operate in any plans and organizations drawn up to facilitate the successful carrying out of full employment policies.

Report on labour conditions in Japan in 1950

Japan's trade unions during the past year have undergone a complete realignment to form a united front and have reorganized under more responsible leadership, according to an article in the *International Labour Review.*

Other important developments were: first, the intensification and expansion of labour education so as to make trade union members more active and responsible; and second, the further improvement and expansion of collective bargaining, including the clarification and recognition of management's and labour's rights.

The article brings up to date an earlier survey which was reviewed in the LABOUR GAZETTE, October, 1949, pages 1224 to 1227.

Since the war, the article states, certain minority groups have made repeated attempts to use the Japanese labour movement as a means of gaining political control and of disrupting the economic recovery of the country. This lead was largely given through the National Congress of Industrial Unions (Sanbetsu), organized in 1946 and the National Liaison Council of Labour Unions (Zenroren) which was organized in 1947, and became an affiliate of the World Federation of Trade Unions.

At the end of 1948, however, moderate labour leaders launched a "democratization" movement to eliminate the growing control of trade unions by minority groups. By late 1949, the movement had the support of more than four million trade unionists and shortly afterward this newly united majority of Japanese labour became affiliated with the International Confederation of Free Trade Unions.

A General Council of Japanese Trade Unions (Sohyogikai) was tentatively formed, and later had its formal inauguration in July 1950. It is made up of 20 major national industrial unions and federations representing nearly four and a half million workers.

To counteract these developments, the Sanbetsu, whose membership had slipped from over a million to about a quarter of a million, decided in July of 1950 to dissolve so that its affiliates might amalgamate with the Zenroren. The latter, also with a decimated membership, was to be converted from a loosely organized liaison council into a federation of labour unions as the left-wing counterpart of the General Council.

In addition to increasing the size of membership, trade unions are growing more conscious of improving its quality as well. As one step in this direction, trade unions, assisted by the Ministry of Labour, have launched and expanded workers' education programs, including year-round and summer schools, organization of libraries and information centres, radio and film programs, and two-month tours in United States to study labour practices in that country.

While certain negotiating processes are still in the experimental stage, collective bargaining has become a generally accepted procedure in labour-management relations, the article continues. All workers, with the exception of 1·6 million national and local government employees enjoy the right to negotiate formal collective bargaining contracts. As for the enforcement of labour legislation, the article states that at present 1,751 inspectors carry out a monthly average of 30,000 inspections, and it has been found that in general employers are willing to comply with the law. At the end of the second year of enforcement, it is clear that both employers and workers "are becoming fully aware of their rights and responsibilities under the Labour Standards Law."

While the wages condition has improved over last year as a result of the economic stabilization program, the report disclosed that the complexity of the wage structure remains. This, together with other economic and political factors, continues to hinder the Japanese government from introducing a minimum wage.

Housing for labour in Bombay

According to the Government of India Information Services, the Government of Bombay has made it compulsory for industrialists to provide housing facilities for at least 25 per cent of the labour they will employ in their new undertakings. The labour quarters are to be completed with the factory building.

Average hours of work in France

The French National Statistical Institute has released the results of a sample survey of hours of work in various occupations. The survey was taken in April and May, 1950.

Group	*Average Weekly Hours*
ALL GAINFUL ACTIVITIES	49.2
Non-Agricultural	46.4
Agriculture, Forestry and Fishing	56.2
ALL INDUSTRY AVERAGE	45.3
Mining	46.0
Metal Production and Metal Trades	45.8
Building, Public Works, Building Materials, Glass and Pottery	46.4
Textiles, Clothing, Related Trades, Hides and Leather	41.9
Other Industry	46.6
Transport	46.9
Commerce	51.7
Administrative and Professional	44.7
Domestic and Health Services	46.2

WORKING CONDITIONS OF OFFICE EMPLOYEES IN CANADA

Salaries and Hours in Manufacturing

Weekly salaries of office employees in 19 representative clerical occupations averaged $36.60 in October 1949. The salaries of male clerical workers averaged $44.80, compared with $32.50 for female workers.

More than two-thirds of the office employees were on a five-day week in 1949. The normal week averaged about 39 hours, with 46 per cent of the employees working 37½ hours or less.

In the five major cities analysed, the highest average weekly salary was paid in Montreal and the shortest average weekly hours were worked in Toronto.

Office Workers under Collective Agreements

The majority of office workers covered by agreements are included in those signed primarily for other groups of workers, but a significant number now bargain separately with management. While the agreements examined showed little uniformity as a group, many resembled those obtained by plant workers in the same establishment.

The collective agreements usually listed weekly or monthly wage scales for the majority of occupations, and many indicated automatic increases based on length of service. Compensatory time off was more common for office employees than premium pay for overtime work. One or two weeks' vacation with pay and eight paid statutory holidays were predominant.

SALARIES AND HOURS OF OFFICE EMPLOYEES IN CANADIAN MANUFACTURING INDUSTRIES, OCTOBER 1949*

The office employee is an important member of the labour force of the Canadian manufacturing industries. Although few in numbers—about 15 per cent of all employees—the clerical staff is essential for the continuation of regular production operations. A great amount of clerical work is necessary to obtain the labour and materials required for the manufacturing processes, and to direct the production operation itself. The eventual disposal of the completed product depends in large part on the duties performed by the clerical worker. Perhaps to the employee the most important function of the office staff is its maintenance of payroll records, so that each worker will receive his rightful compensation for the time spent on his job or the amount of work he has completed.

In 1949, the salaries and hours of office employees in manufacturing varied considerably between the regions of Canada. Weekly salaries were generally greater and the hours of work less in the more industrialized provinces of Ontario, Quebec and British Columbia. In the five major cities, analysed in the second part of this article, it will be noticed that on the average the salaries are equal to or greater than they are in the provinces as a whole, and the normal weekly hours of work are less.

The data for this article were obtained from about 6,000 manufacturing establishments employing more than 132,000 office and 720,000 plant workers in 1949. Over one-half of the office employees were in Ontario and about 30 per cent were in Quebec. Almost equal proportions, six per cent, were employed in British Columbia and the Prairie Provinces; and about three per cent were in the Maritime Provinces. Information on the normal work week was available for all of these office employees; but a somewhat smaller number, representing more than 100 industrial communities, were used to obtain salary information for the 19 occupational groups studied.

The clerical occupations selected for this study comprise the majority of office employees but do not include senior specialist and executive groups and some very junior workers.

Average Weekly Salaries

The types and duties of office occupations depend to a great extent on the size and organization of the office and the function which the staff performs in relation to such matters as purchasing, production, sales and general administration.

Certain occupations such as material record clerks, office appliance operators and telephone switchboard operators are almost all employed by large firms. On the other hand, a large proportion of bookkeepers are employed in smaller establishments owing to their need for less specialized accounting methods. Office clerks in smaller firms frequently have more varied duties than in large firms at the junior and intermediate levels whereas those in large offices are apt to have more supervisory responsibility at senior levels.

In Table I all salaries have been expressed on a weekly basis in order to provide comparability, although some firms pay their office employees by the month.

Provincial Differentials.—Average salaries of office employees varied to a certain extent according to the geographic region in which the workers were employed. The approximate average salaries of 19 job classes were highest in the most heavily industrialized provinces of British Columbia, Quebec and Ontario, namely, $37.50 a week in the first two cases and $36.50 in the last. They were somewhat lower in the Prairie Provinces, averaging $34 in Alberta and Saskatchewan and $33 in Manitoba. The lowest average weekly salaries were reported for the three Maritime Provinces as follows: New Brunswick, $32.50; Nova Scotia, $32; and Prince Edward Island, $24.50.

Of the 19 occupational classifications for which data on salaries were prepared, six received the highest average salaries in British Columbia, five both in Quebec and Ontario and three in Alberta. Lowest average salaries were reported in one or another of the three Maritime Provinces for 14 classes of office workers, in Manitoba for three, and in Saskatchewan for one.

* Information in this article was prepared from data obtained in the annual survey of wage rates and working conditions for 1949 conducted by the Economics and Research Branch of the Depart- of Labour. Employers were asked to report on wages and certain conditions of work in their establishments during the last pay period preceding October 1, 1949.

Occupational Differentials.—On a Canada basis, cost clerks earned the highest average salaries of the six occupational groups of male employees used in this analysis and payroll clerks the lowest. The average salaries for the workers within each of these two occupations were $47.99 and $43.42 per week respectively. In the case of women workers, secretaries were the highest paid on the average, receiving $41.80 per week and typists the lowest at $29.34. Canada average salaries for the various occupational categories tend to fall between those for Quebec and Ontario owing to the large number of office employees covered in each of those two provinces.

The salary levels of one occupation compared with another varied to a certain extent within each province, particularly in the case of men office workers. Male payroll clerks, for example, were the highest paid workers covered in this comparative study in New Brunswick and Alberta but were lowest in Quebec, Ontario and Manitoba. Male cost clerks were the highest paid group in four of the eight provinces for which data are presented but were lowest in New Brunswick.

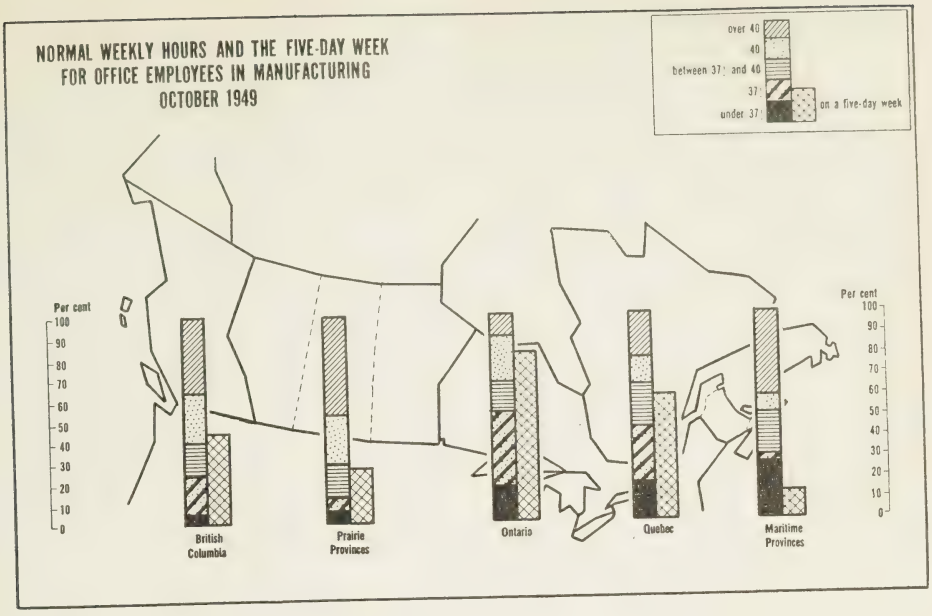
Among women office employees, secretaries were the highest paid group in all provinces but Saskatchewan. Women bookkeepers were highest in that province and generally next to highest in the others. The lowest paid women workers were typists in five of eight provinces reporting salaries for this occupation. In most cases, however, there was very little difference between the average salaries received by typists and those earned by telephone switchboard operators and clerk-typists. Apart from secretaries and bookkeepers, the average salaries of women clerical workers were generally between $25 and $35 a week. Stenographers received higher average salaries than typists in all provinces by amounts ranging from $2.61 a week in Nova Scotia to $6.44 in Quebec.

Male office employees received higher average salaries than women engaged in the same occupation and province by amounts ranging for the most part from $10 to $15 per week. On a Canada basis the differentials were from $9.67 a week for bookkeepers to $15.56 for cost clerks.

Part of such differences may be attributed to a larger proportion of women than men at the junior levels of the occupations. However, the extent to which differences in salaries for male and female workers in the same occupational classification may be due to differences in duties is not known.

The Normal Work Week

The normal work week of all the office employees covered in this survey of the Canadian manufacturing industries averaged approximately 39 hours in 1949. In the two largest provinces, Ontario and Quebec, the work week averaged about 38½ and 39 hours respectively. The corresponding weekly averages were just over 40 hours in the Maritime Provinces and British Columbia, and almost 40¾ hours in the Prairie Provinces.



The most common work week for office employees was one of 37½ hours, with about 30 per cent of the total on this schedule (Table II). Just under 20 per cent of the clerical employees were normally working 40 hours, the next most common work week. Over 80 per cent were normally working 40 hours a week or less, more than half of whom were on a work week of 37½ hours or less. The proportionate distribution of office employees by their normal weekly hours of work is as follows:—

Normal Weekly Hours	Per Cent of Workers
Less than 35	1.2
35	7.4
Between 35 and 37½	8.2
37½	29.0
Between 37½ and 40	17.0
40	19.1
Between 40 and 44	9.5
44	6.0
More than 44	2.6
Total	100.0

Provincial Comparisons.—The normal weekly hours of work varied substantially between the three Maritime Provinces. The work week averaged about 39¾ hours in Nova Scotia, 41 hours in New Brunswick and 42½ hours in Prince Edward Island. More than one-half of the employees in Prince Edward Island and New Brunswick and one-third of those in Nova Scotia were working more than 40 hours a week.

The largest group of office employees in both Quebec and Ontario were normally working 37½ hours a week, and the next largest group were working 40 hours. Sixty per cent of the employees in Quebec and 72 per cent in Ontario were working from 37½ to 40 hours a week. An additional 18 per cent in both provinces were on a work week of less than 37½ hours.

The average work week was about the same in the three Prairie Provinces, being 40½ hours in Manitoba and just under 41 hours in Saskatchewan and Alberta. Almost 85 per cent of the office employees in Manitoba were working from 38 to 44 hours a week, as compared with 86 per cent in Saskatchewan and 80 per cent in Alberta.

A very small proportion of the workers in these provinces were normally working 37½ hours a week or less.

The predominant work week in British Columbia was one of 40 hours, with 37½ and 44 hours being the next in importance. Almost one-quarter of the office employees were working 37½ hours or less, and all but a few of the remainder were normally working from 38 to 44 hours a week.

The variation in the distribution of the normal weekly hours of work within and between the five regions of Canada may be seen in the following table:—

Region	Normal Weekly Hours		
	37½ hours or less	38 to 40 hours	More than 40 hours
Canada	46%	36%	18%
Maritime Provinces	31%	29%	40%
Quebec	46%	33%	21%
Ontario	53%	37%	10%
Prairie Provinces	12%	42%	46%
British Columbia	24%	39%	37%

In general, the normal work week of the office employees in the manufacturing establishments is less than the work week of the plant employees. Whereas 62 per cent of the office employees were working less than 40 hours a week in 1949, a previous study[1] has shown that less than one per cent of the plant employees were in this group.

The Five-Day Week.—More than two-thirds of the office workers in the Canadian manufacturing industries were on a five-day week in 1949. Most of these employees were normally working 37½ or 40 hours during the week. The proportion of employees on a five-day week varied from 14 per cent in the Maritime Provinces to over 80 per cent in Ontario. More than 60 per cent of the office workers in Quebec, 45 per cent in British Columbia and 27 per cent in the Prairie Provinces were working five days a week.

For all but three of the provinces a greater proportion of office workers than plant workers were on a five-day week in 1949. The excepted provinces are Manitoba, Alberta and British Columbia. The proportion of plant workers in Manitoba on a five-day week was almost twice that of the office employees. The percentage of

1 "Working Conditions in Canadian Manufacturing Industries, October 1949", Labour Gazette, November, 1950, p. 1836.

office and plant workers on a five-day week in each province is as follows:—

Province	Proportion on a Five-Day Week	
	Office Workers	Plant Workers
Prince Edward Island...	4%	3%
Nova Scotia	15%	10%
New Brunswick	13%	8%
Quebec	61%	53%
Ontario	81%	72%
Manitoba	26%	52%
Saskatchewan	27%	25%
Alberta	27%	35%
British Columbia	45%	66%

SALARIES AND HOURS IN FIVE MAJOR CITIES

This section of the article presents a comparative study of weekly salaries and hours of work for office employees in the five major Canadian cities of Halifax, Montreal, Toronto, Winnipeg and Vancouver. Information from some 2,400 manufacturing establishments, employing almost 60,000 office workers, was obtained for the pay period preceding October 1, 1949. More than 28,000 of these workers were employed in offices in Toronto, 22,600 in Montreal, 4,500 in Vancouver, 2,800 in Winnipeg, and about 1,200 in Halifax. These firms also employed over 210,000 plant employees, whose working conditions have been analysed in a previous article.[2]

Average Weekly Salaries

There is a large variation in the average salaries of similar clerical occupations among the five major cities as well as among the various occupations within each city. The approximate average weekly salary of the 19 selected clerical occupations shown in Table III ranged from $38 a week in Montreal to $32 in Winnipeg. The corresponding average salary was $37.50 in Vancouver, $36.50 in Toronto and $32.50 in Halifax.

A fairly uniform pattern existed between cities in the salary levels of one occupation compared with another. In most cities cost clerks and bookkeepers received the highest salaries among the male office employees, and secretaries among the women employees. The lowest salaries, on the average, were received by male payroll clerks and women typists.

Inter-City Differentials.—The data on average salaries indicate that neither uniformly high nor uniformly low rates prevailed in one city as compared with another for all occupations. Office workers received higher pay in Montreal for nine of the 19 occupational classes covered, Vancouver for five, Toronto four and Winnipeg one. In Halifax, average salaries were somewhat lower than in other cities for 10 job categories, in Winnipeg for seven, and in Toronto and Vancouver for one each.

It is evident that the general levels of office salaries were substantially higher in Montreal, Toronto and Vancouver than they were in either Winnipeg or Halifax. In establishments in which the office force is small, salaries tend to be somewhat lower than in those having large numbers of office workers. This may account in part for the fact that average salaries are higher in many of the occupations listed for these three centres than in the two other cities. Bilingual requirements for certain clerical and stenographic jobs in Montreal may also tend to increase rates in that centre.

Occupational Differentials.—The comparative levels of pay for one occupation as compared with another varied to a certain extent according to the city in which the workers were employed; however, a fairly uniform pattern is apparent for office employees of both sexes. In the case of male employees, cost clerks were the highest paid workers in three cities and bookkeepers relatively high paid in all five centres. For female office workers, the pattern is more consistent, with secretaries reported as highest paid and bookkeepers next to highest in all five communities. Typists, clerk-typists and telephone switchboard operators were among the lowest paid female workers in the cities covered. Office machine operators as a class were generally paid about the average salary for women. Of the three types specified, calculating, billing and bookkeeping, the last-mentioned was highest in most centres.

Average salaries for male clerical employees varied less than for women office workers between occupations and cities. Male office employees generally received an average of $40 to $50 a week, depending upon their occupation. The lowest average salary reported was $37.71 for payroll clerks in Winnipeg and the highest $51.84 for cost clerks in the same city.

Women office workers averaged from $29 to $44 a week for the various occupations in Montreal and Toronto, $28 to $39 in Vancouver, $24 to $35 in Winnipeg and $26 to $35 in Halifax. The average ranged from a minimum of $24.14 for typists in Winnipeg to a maximum of $44.36 for secretaries in Montreal.

[2] "Hours and Working Conditions in the Manufacturing Industries of Halifax, Montreal, Toronto, Winnipeg and Vancouver, October 1949", LABOUR GAZETTE, July, 1950, p. 1014.

TABLE I.—AVERAGE WEEKLY SALARIES OF OFFICE EMPLOYEES IN CANADIAN MANUFACTURING INDUSTRIES, OCTOBER 1949

NOTE.—The extent to which differences in salaries for male and female workers in the same occupation may be due to differences in duties is not known.

Occupation	Canada	Prince Edward Island	Nova Scotia	New Brunswick	Quebec	Ontario	Manitoba	Saskatchewan	Alberta	British Columbia
	$	$	$	$	$	$	$	$	$	$
Accounting and Bookkeeping Clerks, Male	45.11	.....	.....	.....	43.10	45.85	38.64	.....	.....	48.92
Bookkeepers, Male	46.62	40.45	42.97	42.08	47.27	46.48	44.16	46.30	45.71	47.83
Bookkeepers, Female	36.95	28.85	30.59	31.72	39.22	36.82	34.22	35.31	34.27	36.91

NOTE.—Any monthly salaries reported were changed to a weekly basis using 4 1/3 weeks per month as a conversion factor.

Male office employees received higher average salaries than women in similar occupations in all five centres.

The Normal Work Week

The average normal work week of office employees in 1949 ranged from 38·0 hours in Toronto to 40·2 hours in Winnipeg. The normal hours averaged 38·4 a week in Montreal, 38·7 in Halifax and 39·7 in Vancouver. Most of the employees were normally working from 35 to 40 hours a week, with 37½ hours predominant in the two largest cities of Montreal and Toronto (Table IV).

In Halifax, more than 45 per cent of the office employees were on a normal work week of 36½ hours in 1949. Seventeen per cent were normally working 44 hours a week and 14 per cent 39 hours. Almost three-quarters of the employees were working less than 40 hours a week.

There was a wide variation in the normal weekly hours of office workers in Montreal, although more than 35 per cent were on a 37½-hour week. In addition, 10 per cent were normally working 35 hours and 12 per cent 40 hours. Altogether, almost 80 per cent of the office employees were working from 35 to 40 hours a week.

More than half of the office workers in Toronto were on a 37½-hour week, with a further 15 per cent working 40 hours and about 10 per cent 35 hours. All but 8 per cent of the office employees in the Toronto manufacturing industries were normally working 40 hours a week or less in 1949.

The normal weekly hours of work in Winnipeg were, on the average, slightly higher than in the other four cities. Forty-three per cent of the employees were working more than 40 hours a week, and more than 80 per cent were working from 38 to 44 hours. Twenty-eight per cent of the workers in this city were normally working 40 or 40½ hours a week, 19 per cent 44 hours a week and about 17 per cent 37½ or 38 hours a week.

In Vancouver, more than one-quarter of the office employees were working 37½ hours

Note: Any monthly salaries reported were changed to a weekly basis, using 4⅓ weeks per month as a conversion factor.
(1) Ranges include the rates for the middle 80% of workers, whereas averages are based on all rates reported.

and an almost equal proportion 40 hours a week; an additional 17 per cent were on a normal work week of 44 hours. More than 70 per cent of the employees in this western city were working from 37½ to 40 hours a week.

An indication of the difference in the distribution of normal weekly hours of office employees between the five cities may be obtained from the following table:—

City	Normal Weekly Hours		
	37½ hours or less	38 to 40 hours	More than 40 hours
Halifax	58%	17%	25%
Montreal ..	58%	24%	18%
Toronto ...	70%	23%	7%
Winnipeg ..	14%	43%	43%
Vancouver .	31%	46%	23%

The normal weekly hours of office employees were generally less than the weekly hours of plant workers in the same establishment. The proportion of plant employees working less than 40 hours a week was under one per cent in each of the cities except Vancouver, where about six per cent were in this group.

The Five-Day Week.—The proportion of office employees on a five-day week varied substantially between the five major cities in 1949. Eighty-six per cent of the workers in Toronto were on a five-day week, 74 per cent of the workers in Montreal, 59 per cent in Vancouver, 29 per cent in Winnipeg and less than 5 per cent in Halifax.

In four of the cities the proportion of office employees on a five-day week was less than the proportion of plant workers on this weekly schedule, although the normal weekly hours in the offices were generally less than those in the plants. The excepted city was Toronto, where a slightly higher proportion of office than plant employees were normally working five days a week. The different proportions in each city is as follows:—

City	Proportion on a Five-Day Week	
	Office Workers	Plant Workers
Halifax	5%	24%
Montreal	74%	77%
Toronto	86%	85%
Winnipeg	29%	54%
Vancouver	59%	86%

The predominant work week for the office employees on a five-day week was 36½ hours in Halifax, 37½ hours in Montreal and Toronto, and 40 hours in Winnipeg. In Vancouver, 37½ and 40 hours were equally common for the workers on a five-day week.

COLLECTIVE AGREEMENTS OF OFFICE WORKERS IN CANADA*

In discussions of the rapid growth in the use of collective bargaining procedures during the past decade the activities of office workers in the field are frequently overlooked. This is perhaps understandable since the total number of these workers covered either by separate agreements or in agreements signed primarily for other groups of workers is still relatively small. Yet a significant number of office workers now bargain collectively with management over conditions of employment.

The number of those bargaining collectively, however, is of less importance than the fact that the growth in the use of the practice among office workers has been more rapid during the past decade than ever before. Unions, and collective bargaining, made little progress among these workers, outside of some employed in public utilities, until the beginning of World War II. But the trend of events since that time has encouraged greater union participation by so-called "white collar workers". Since 1940 many wage and non-wage advantages, formerly enjoyed by office workers only, have been extended to plant employees. As the position of many office workers relative to production workers has changed, and as they have become more familiar with union activities generally, greater numbers have joined unions. Moreover the enactment of labour laws favouring union organization has served as an encouragement to these workers.

Although there is no tabulation of the number of agreements which include office workers as well as production workers, there are at present at least 100 collective agreements covering some 21,900 workers which pertain solely to office workers. These agreements, while showing little uniformity among themselves, have many similarities with agreements for plant workers. With respect to wages, which is the most consistently mentioned subject in the contracts, the same method is, for example, employed in setting forth the agreed upon rates of pay according to the majority of occupational groups. But in accord with the general method of paying office staffs, Table I shows that the vast majority of the workers covered are paid on a monthly or weekly basis. Less than ten per cent of the office workers are paid hourly or daily rates, which are, of course, the more common forms of wage payment for plant employees. Almost half the workers receive automatic increases in pay based on length of service, and ranges of rates are listed for another 5,000 workers. Moreover, scattered through the agreements for clerical workers are examples of many other common provisions respecting wage differentials. Forty of the contracts indicate starting rates lower than the normal occupational rates; one in every four contracts showed reduced rates for women and boys; and, in addition, references to "equal pay for equal work", wage bonuses and dismissal pay are found in a few contracts.

Increased rates of pay for overtime work, in contrast with the wide coverage of such clauses in production worker agreements, are included in less than half the agreements covering some 13,500 workers. According to the agreements these workers receive one and one-half or two times their regular rate of pay when working beyond normal hours. For the most part normal hours are computed on a weekly basis although daily and even monthly criteria are frequently found. Approximately one-third of the agreements make no mention of overtime and an additional twenty state that the worker on overtime will be paid his straight time rate or receive compensatory time off.

Many of the office workers covered by the agreements examined are paid at overtime rates for work carried out on the sixth or seventh working day in a week. Although such provisions are most common for the seventh day of the week, covering half the workers, overtime payment for work on the sixth day is made by over a quarter of the total number of workers.

Of the agreements examined, it is those affecting the largest groups of employees which are most similar to plant agreements. These generally contain the kind of clauses most frequently introduced by unions. For example, Table II points to the presence of check-off clauses among agreements covering larger, rather than smaller, groups of workers, well over half the workers being under the 38 agreements having such clauses. The check-off is found in various forms, but most commonly it

* Study No. 13 in the series, *Collective Agreement Studies.*

75226—3

is provided that the check-off of union dues in voluntary for the worker and can be revoked by him at any time.

Office worker agreements vary as to the number of paid statutory holidays in the year. The most common arrangement is for either seven or eight paid holidays, as shown in Table III. Once again, the clause was found principally among the agreements in the larger establishments. Only in the smaller establishments does the number of paid statutory holidays number six or less.

The sharpest contrasts between office and plant workers' agreements are in regard to union security, hours of work and vacations with pay. Unlike many agreements covering plant workers, the union shop is more common in office workers' agreements including membership provisions than are straight maintenance of membership provisions. This contrast is illustrated in

TABLE I.—WAGE PROVISIONS

Wage Rate Provisions	Number of Agreements	Number of Workers Covered
Hourly and daily only	10	1,448
Weekly, monthly and/or annual	84	19,032
Individual adjustments on basis of:		
Merit increases	14	1,434
Automatic increases based on length of service and merit	23	9,723
Not stated, but ranges of rates are provided	18	4,003
Agreements reviewed	100	21,900

Ten years: 3 weeks	7	980
Fifteen years: 2 weeks	4	1,017
Twenty years: 2 or 3 weeks	16	5,480
Twenty-five years: 2 to 4 weeks	3	4,615
Agreements reviewed	100	21,900

75226—3½

unit must join the union. The remainder of the agreements are phrased so that older workers are given more freedom of choice respecting union membership, maintenance of membership being required in most cases after once having joined.

Of the clerical employees under the agreements the majority appear to work a five-day week of less than forty hours. Only about one in every ten of the employees affected as shown in Table V works more than five days in the week and only one in every six is scheduled to work forty or more hours in the week. These tendencies in the agreements for clerical workers reflect a generally shorter work week than plant agreements in the same establishments.

Uniform plans for paid vacations are more common in the office worker agreements than in many plant agreements. This is evident from Table VI where it is shown that close to half the workers under 37 contracts are covered by uniform vacation provisions. For the remainder, vacations depend on years of service varying from one-half day for each month worked, if less than six months are involved, to two to four weeks for twenty or twenty-five years of employment. After a worker has been employed for six months increases in the length of vacations are usually made at one year, two years, three years, five years and at five-year intervals thereafter until twenty or twenty-five years of service has been reached.

Seniority clauses, while covering only approximately half the office workers, appear in more than three-quarters of the agreements examined. Frequently the clauses are more general than those in plant agreements, but like the latter they apply in various combinations, skill and ability also being considered, to lay-offs, promotion and rehiring.

A final feature of the office worker agreements that might be commented on is employee benefit clauses. Paid sick leave provisions are found in thirty-six of the hundred agreements covering almost one-half of the workers. These are of two types, as shown in Table VIII one providing for a specified period for sick leave offered to all employees and the other for a plan based on length of service. In each case an employee receives his regular wage rate or a percentage thereof as sick-leave pay. In a minority of cases the plan is left for arrangement at the time of sickness. Some of the agreements refer to the group insurance plans for the workers and describe them in some detail, while others covering about one-quarter of the workers mention the pension plan of the company.

TABLE VII.—SENIORITY RECOGNITION PROVISIONS

Seniority Recognition	Number of Agreements	Number of Workers Covered
In lay-offs only	4	1,631
In promotions only	7	773
In lay-offs and promotion	15	2,943
In lay-offs and rehiring	3	183
In lay-offs, promotion and rehiring	48	5,386

CONVENTIONS OF PROVINCIAL LABOUR ORGANIZATIONS

Resolutions asking for improved social security legislation, better provincial labour standards and opposing compulsory arbitration were among those passed recently at meetings of provincial labour organizations.

Nova Scotia Federation of Labour (CCL)

The 9th Convention of the Nova Scotia Federation of Labour (CCL) was held in Glace Bay, October 23, 24 and 25. Representing 35 local unions, 89 delegates registered for the Convention.

Address of George Burt

George Burt, national director of the United Automobile Workers of America, and member of the CCL Executive Council, addressed the opening session.

Mr. Burt recommended political action by labour as a "roadblock" to halt the inroads being made in labour's wage gains through bargaining. He scored what he termed the "consistent refusal" of the Federal Government to accept labour recommendations for changes in the Unemployment Insurance Act, in particular a reduction of the nine-day waiting period, and a raising of the benefit rate.

Mr. Burt also dealt with the questions of old age pensions, housing, rising living costs, and the recent bill passed to stop the railway strike.

Resolutions

The Convention considered resolutions on a wide variety of topics including unemployment insurance, free high school textbooks for Nova Scotia students, procurement of steel plate for local industries, and government action to have this type of steel manufactured in the province, and a request for a labour, industry and government conference to seek a solution to the problems of older workers.

Among the resolutions approved by the delegates were:—

A request for increased unemployment insurance payments of $18 a week for single men and $25 a week for married men plus an allowance for each child under 16. This resolution also asked for continuance of payments after benefits are exhausted;

A request asking the Nova Scotia Government to cover all its employees under the provisions of the Unemployment Insurance Act;

A request for an increase in the number of industrial diseases compensable;

A request that the Nova Scotia Government adopt rent controls;

A change in the confidential employees' clause of the Labour Relations Act so that the individual could decide on his eligibility to join a union;

An increase from $75 to $125 per month in total disability pensions;

That prevailing rates for a locality be paid all government employees including highway employees;

Two weeks paid vacations for all employees;

Legislation to make the 8-hour day standard throughout the province;

An end to the old age pensions means test, and pensions of $120 a month for man and wife after 60;

A cost-of-living bonus, payable by the provinces to all pensioners;

Adjustment of pay for civil servants;

Exemption from income tax for union dues, transportation to work and equipment essential to work;

Recognition of right of government employees to organize;

Free medical aid for widows, pensioners and the families of compensation cases.

Election of Officers

Sid Oram of Sydney was elected president of the Federation by a vote of 45 to 30 over Tom McLachlan, first president of the organization.

First Vice-President John R. MacDonald, and secretary-treasurer J. C. Nicholson were returned by acclamation.

Three members of the retiring executive were defeated in the elections. The new executive members are Martin Muner, second vice-president, Charles Morton, and Milfred Hubley, Board members.

Peace Resolution

A motion designed to give Federation approval to the "Stockholm Resolution" did not reach the Convention floor. In its place, the Convention passed an amendment that would ask all governments to ban the use of atomic weapons, and not just the Canadian government. The vote of 47-13 in favour of the amendment followed considerable discussion from the floor.

New Brunswick Federation of Labour (TLC)

The 38th Annual Convention of the New Brunswick Federation of Labour (TLC) was held in Moncton from October 4-7. Representing nearly 60,000 members, the 75 delegates dealt with matters of provincial and national interest to the membership.

The Convention was opened by J. R. Gagnon, acting president of the Moncton Trades and Labour Council, who extended a welcome to the delegates. Mr. Gagnon then introduced Mayor T. B. Parlee of Moncton, who addressed the Convention and paid tribute to the community spirit of labour unions, and the contribution made by labour in the city's growth.

Others who spoke briefly at the opening session included E. A. Fryers, M.L.A., C. I. L. Leger, M.L.A., and E. W. George, M.P.

Address of Hon. Milton F. Gregg Minister of Labour

Hon. Milton F. Gregg, Federal Minister of Labour, was guest speaker at the opening session. Mr. Gregg was introduced by Mr. James Whitebone, Federation president.

Mr. Gregg brought greetings from the Department of Labour, and spoke of Mr. Whitebone's services both to New Brunswick and the nation as a whole.

Commenting on the growing spirit of optimism in the province, Mr. Gregg said: "Your organization has done much and will continue to do more in the development of our province. Anyone planning an industrial project in New Brunswick can always be sure of a sane, intelligent and responsible labour force."

The Labour Minister added that information collected by his department indicated that employment would continue at a high level throughout the winter.

Speaking on Communism, Mr. Gregg said that labour-management co-operation in New Brunswick had practically eliminated this threat. Because of the capable leadership, and orderly consideration of problems by New Brunswick labour, there was no distrust or suspicion in labour's ranks.

Concluding his remarks, the Minister spoke briefly on the rail strike, and said that through its talks with labour and management, the government had been able to avoid compulsory arbitration.

Presidential Address

In his keynote address, President Whitebone attacked the imposition of a sales tax by the New Brunswick Government. He also took exception to what he called "the evident orgy of school building throughout New Brunswick." He said that he wondered if the education of students had become secondary to the erection of "modernistic monuments to local school board members."

Resolutions

There were 31 resolutions on the agenda which covered a wide variety of topics of both local and national concern. Included among the resolutions adopted by the Convention were:—

A request for free high school texts;

A resolution asking that stevedoring in Saint John and Halifax be removed from the category of seasonal employment for unemployment insurance purposes;

A suggestion that a medical review board be established by the Workmen's Compensation Board;

Establishment of an occupational therapy establishment by the Compensation Board;

Legislation by the province making vacations with pay, and a weekly rest day compulsory;

A request for a prepaid health program for New Brunswick;

A recommendation that price controls and excess profits taxes be imposed;

A resolution favouring the five-day, forty-hour week;

A request that the Provincial Government insert a fair wage clause in all contracts.

Election of Officers

James A. Whitebone of Saint John was unanimously re-elected to his 16th term as president by the Convention.

Other officers elected were, George Melvin, secretary-treasurer; G. W. Roy Miles, first vice-president; J. Adrien Dupre, second vice-president; and C. T. Cheeseman, third vice-president.

Alberta Federation of Labour (TLC)

The 30th Convention of the Alberta Federation of Labour (TLC) was held in Edmonton, October 9 to 11. Over 150 delegates, the largest number in the Federation's history, were seated.

The delegates were welcomed to Edmonton by His Worship, Mayor Sydney Parsons. Hon. C. E. Gerhart, Minister of Municipal Affairs and Provincial Secretary, addressed the Convention on behalf of the Provincial Government.

Lieutenant-Governor J. J. Bowlen attended the opening session of the Convention, and his visit marked the first time that a Lieutenant-Governor attended a Federation meeting.

Fraternal greetings from the Trades and Labour Congress were brought by General Secretary-Treasurer Gordon G. Cushing who addressed the delegates.

Resolutions

The Convention dealt with more than fifty resolutions, on topics such as collective bargaining, hours of work and rates of pay, workmen's compensation, labour welfare, old age pensions and social security.

The resolutions on social security and old age pensions asked for abolition of the means test, pensions of $60 a month to all at age 65 (60 for women), and the enactment of a comprehensive social security law.

The Convention passed a resolution which registered strong opposition to compulsory arbitration of any dispute except in the case of a dispute occurring during the life of an agreement. Another resolution asked for a special section of the Alberta Labour Act to apply to the construction industry in the province.

Other resolutions asked for a reduction of the work hours to give a five-day, forty-hour week in all industries; strengthening of the Act to prevent abuses in the nature of transferring employees from one employer to another over certification; and restoration of the Unemployment Insurance Commission Referee's Court in Medicine Hat.

The Convention also went on record as favouring increased safety devices under the provincial Workmen's Compensation Act and increased deductions on the stamp book system, to allow 6 per cent deductions and payment of statutory holidays in the construction industry.

Other Business

The Convention gave impetus to the setting up of a committee to study an educational program for the Alberta Federation membership, and placed the first vice-president in charge of it. The committee is to bring a report on its findings.

The report of the Federation Secretary-Treasurer showed that membership had doubled since 1945. The Federation now has 114 affiliated organizations with a membership of 15,874. In 1949, there were 107 affiliated organizations with a membership of 14,134.

Election of Officers

The Federation elected Robert Rintoul of Calgary as president for the coming year, and Grant McHardy of Calgary was elected secretary-treasurer. Vice-presidents elected were: Malcom Ainslie of Edmonton, H. B. Brogden of Calgary, N. E. Marshall of Medicine Hat, J. Cherrington of Edmonton, Miss Anna MacLaren of Lethbridge and Charles Gilbert of Edmonton.

The Federation also made provision in its constitution for the election of a Civic Federation Vice-President, provided that a Joint Council of Provincial Civic Employees was formed. This new vice-president is to be appointed by the Federation Executive. During the meetings, the formation of this Civic Employees' joint council was announced and a request for a charter was forwarded to the Trades and Labour Congress of Canada.

Representatives of TLC Affiliates in British Columbia

Over 100 delegates representing British Columbia unions and district councils affiliated with the Trades and Labour Congress met in Victoria from November 15-18 to review the Provincial Labour Code and suggest amendments to some provisions in the province's labour laws. The delegates dealt with some 70 resolutions in the three-day session.

In line with the anti-Communist policy laid down at the Annual Convention of the parent Trades and Labour Congress, the executive barred several delegates from taking their seats at the meetings. This action met with considerable opposition from some delegates, but was supported by the majority of delegates when put to a vote.

Industrial Arbitration and Conciliation Act

Numerous resolutions concerning the operations of British Columbia's labour code as laid down in the Industrial Arbitration and Conciliation Act were discussed during the convention. Some delegates were in favour of completely doing away with the Act and having a new Code passed to replace it. However the majority of the delegates were not in favour of scrapping the Act, but said that they preferred to amend the provisions presently working against their interests.

The attitude of the majority was expressed by convention Chairman, R. K. Gervin of Vancouver when he said: "Let

us face realities. Labour asked for this in the first place. We asked consistently for it for many years until it was brought down in 1948. I say the ICA Act has done a great deal for us, particularly in our organizing work. To say we should now throw the Act out, I say is out of the question."

The convention then worked out several resolutions which recommended amendments to the Act. Important amendments sought by the Convention would:—

Discontinue the present practice of strike votes conducted by the British Columbia Labour Relations Board. The resolution urged that strike votes would be conducted by the unions concerned, with the Labour Board represented only by a scrutineer. The resolution also asked that under no circumstances would the employer be allowed to have a scrutineer present.

Require the Labour Board to prosecute employers or union groups violating agreements on the request of the aggrieved party.

Amend the Act to allow unions to strike when companies break agreements.

Amend the Act to outlaw company unions.

Make possible the negotiating and signing of regional master agreements. This is at present not allowed under the provisions of the Act.

Give the unions the right to a union shop when a majority of the workers vote in favour of it. At present the unions must bargain for a closed shop or union shop even if a majority of the workers want it.

Hospital Act

Another matter which the convention dealt with was the operation of the British Columbia Hospital Insurance Service. Several resolutions were passed recommending changes in the Act. The unions charged that the Hospital Service was "interfering in the administrative affairs" of hospitals and attempting to dictate the wages paid to hospital employees. One delegate said that "hospitals are not going to subsidize hospitalization through substandard wages". The resolution on this matter reads:—

> This conference strongly opposes the policy of the B.C. Hospital Insurance Service in interfering with the administrative affairs of hospital boards in so far as collective bargaining with the unions of their employees is concerned.

Other resolutions asked that:—

Hospital insurance benefits be effective upon payment of the premium, and that the present thirty-day waiting period be abolished.

Persons having an income of less than $100 a month be exempted from making payments.

The patient's insurance cover the difference between the cost of a private or semi-private room and that of a ward.

Cost-of-Living Bonus

The Convention instructed its executive to ask the Provincial Government to provide a cost-of-living bonus to all persons on superannuation, similar to that paid by the Government to its employees.

ANNUAL CONVENTION OF THE CONGRESS OF INDUSTRIAL ORGANIZATIONS

The 12th Annual Convention of the Congress of Industrial Organizations met in Chicago, Illinois, from September 20-24, 1950. In his keynote address, President Philip Murray asked for labour representation in the creation of American domestic and foreign policy, and opposed wage controls at this time. The Convention also strongly reaffirmed its opposition to the Taft-Hartley Act.

Meeting in Chicago, September 20-24, some 500 delegates attended the 12th Annual Convention of the CIO.

The delegates dealt with over 60 resolutions on a wide variety of topics of interest to labour. Delegates' views and opinions on preparedness measures, foreign policy, European aid, the Taft-Hartley Act, the recent elections, labour unity, housing and rent control, international unionism, political action and many other topics were heard during debate on the various resolutions.

Among the many speakers addressing the convention were: Hon. Martin H. Kennelly, Mayor of Chicago; Governor Adlai E. Stevenson of Illinois; Senator Paul H. Douglas of Illinois; CIO general counsel, Arthur E. Goldberg; Hon. Henry Morgenthau Jr., former Secretary of the Treasury; Secretary of Labour, Maurice J. Tobin; Gus de Muynck, fraternal delegate from the ICFTU; Dr. Mordecai W. Johnson, president of Harvard University; Hon. W. Stuart Symington, Chairman, National Securities Resources Board; and Hon. Oscar Chapman, Secretary of the Interior. A message of greeting from President Harry S. Truman was also read to the delegates.

Address of President Philip Murray

Opening his annual convention address, President Murray decried the tactics employed in the recent United States Congressional elections. He charged that the real issues had been beclouded by . . . "misleading statements, deceitful statements . . . in the course of the recent election".

He said that "evil propaganda" had been used by certain candidates in an effort to link organized labour with subversive elements. Mr. Murray said:—

> Never was there a more diabolical campaign conducted in the history of the United States of America. Issues with respect to the domestic needs of the American people were forgotten, and in the heat of this political war questions of housing, social security, the proper kind of a farm program, Taft-Hartleyism were never presented to the American people in a proper way.
>
> I do not take it, therefore, that the decision arrived at by the people of the United States of America November 7 constituted a repudiation of any of the policies of this great organization of ours, the National CIO.

Speaking of the Taft-Hartley Act, Mr. Murray said that "the Act has not solved the so-called national emergency disputes . . . (but) . . has made it more difficult to mediate and conciliate disputes of an emergency nature . . . The Act has certainly weakened workers' protection. There have been fewer reinstatements and less retroactive pay where people have been reinstated".

Mr. Murray regretted that social security was not an issue in the election. In particular, he deplored the 75 cent minimum wage, and said that "it (is) incumbent on the Congress of the United States of America to enact legislation providing for a minimum of at least one dollar per hour . . ."

Calling for increased participation by labour in United States foreign affairs, President Murray said:—

> We would like to have more real policy-making representation in the State Department, in the ECA and in other foreign programs. We must fight to be given a larger part in the conduct of our country's Voice of America programs, not only as they affect the preparation and the making of a speech or an address to the peoples behind the Iron Curtains, but also in the effectuation of policies that have to do with the operation of the Voice of America as such.

This organization of ours, although it is a trusting organization and although it does believe in good, decent business men playing their part in all matters affecting the welfare of our country, nevertheless we cannot afford as a great labour movement to let business men alone, and professional diplomats, have complete control of all our foreign relations throughout the world. We have got to play our part. Our labour organizations can and will and must supply spiritual and moral leadership to the democratic forces. That is not a mere phrase. It has been used often, but it is meaningful in the sense that it means to all of the people that organizations such as ours have a God-given obligation to provide spiritual and moral leadership to other peoples, not only at home, but throughout the entire universe.

This organization of ours is against appeasement in any form. It hates war, it seeks to achieve peace, and it must of course continue in its efforts to acquire peace for the peoples of the world, not only for the purpose of establishing peace alone but to prevent the continued exploitation of the poor, the hungry, the weak and the sick all over the world, wherever they may be. So that these words, spiritual and moral leadership, which originally emanated in the councils of labour, must be provided by organizations such as ours, the Congress of Industrial Organizations, for our own government and for governments elsewhere all over the universe.

Mr. Murray reported that the Executive Board of the CIO had carried out the instructions of the previous convention to investigate charges of communism against several affiliates and after ". . . democratic processes of trial . . . (had) found them guilty of operating communistically controlled unions and . . . expelled them." Despite the ousting of these unions whose membership was over 850,000, the CIO is numerically stronger, he said. Approximately 70 per cent of the rank and file members of the communist unions had been brought back into membership. President Murray expressed his opinion that "the Communist Party has not only lost its influence in the United States . . . but . . . it is travelling its last mile in our labour movement. They are done."

Turning to the proposed creation of price and wage stabilization boards, Mr. Murray explained to the Convention why he, as a member of the Symington Committee had "cast . . . (his) . . . vote against wage controls in that Board".

Mr. Murray said that corporate profits after taxes had increased from 1936 to 1950, "from four billion, one hundred million to twenty-four and a half billion, six times the amount." As a result of this "the buying power of corporate profits after taxes since the early part of 1946 has increased 43 per cent," he said. In contrast, Mr. Murray said "the buying power of weekly wages during this same period for all kinds of American labour has gone up 6 per cent."

CIO opposition to wage controls "is predicated on the well grounded belief that American labour must first catch up, its wages must be hoisted, and if regimentation must come, and all people must sacrifice . . . there must be equality of sacrifice in every segment of our national life."

Concluding, Mr. Murray said:—

> We have requested the Department of Defence, the Department of Manpower, the National Production Authority, the Symington Committee and all other agencies which have to do with the building up of our national defence program to give to our organization representation on each of these agencies, but not jobs. We are not interested in jobs. We want men placed in positions on the policy making level, where they may have something to say about what America is going to do in this defence effort as of the year 1950.

Message from President Truman

Unable to accept an invitation to address the Convention, President Truman sent a message extending his greetings and best wishes for a successful convention.

In his message, President Truman drew attention to the state of the world, and the difficult situation in Korea. He said that "in co-operation with other free nations we are engaged in increasing our defence forces to the extent necessary to deter aggression elsewhere." The United States would have to concentrate on building its defences in order to meet its world commitments, he told the Congress. This program included helping other nations to resist Communism internally as well as externally. In addition to military aid, it would be necessary to "provide such economic and technical assistance as may be needed to strengthen other free nations," he said.

President Truman described labour's role in this program as a "vital one", and said that "the demands on our system of production can only be met if labour does its utmost to expand our output of defence

materials and equipment." He urged the unions to work toward greater expansion of United States industrial strength.

Turning to what he called the "spiritual contribution" which labour could make to the cause of freedom, Mr. Truman said:—

> The labour movement in this country is a symbol of our concept of freedom. It can speak directly to the working people of other lands. By its example it can show that a free and democratic society is the best hope of the worker everywhere. More than any other element in our country, the labour movement can refute the lies of communist propaganda about the nature of our society, and our objectives in the world. Your organization is already doing much to spread the true message of democracy through the world. It must, in the future, do even more.
>
> We must not forget that, if we are to achieve our aims, we have to increase our strength at home. We must continue to work for better health and better education for all our citizens. We must continue the job of eliminating discrimination on account of race, creed, or colour. We must continue our efforts to achieve a fair labour law, and protect and improve collective bargaining.
>
> The world contest in which we are engaged can not be won by those who would turn back the clock of social progress. It can only be won by those who have faith in the people, and who realize that the liberal creed is the only effective answer to the false dogmas of communist tyranny.
>
> Our defence production efforts will call upon us all to make sacrifices of some of the good things we now enjoy, and to defer some of the material comforts we hoped to have in the near future. These sacrifices should be shared fairly by all groups in our population. If that is done, I am sure they will be shared willingly.
>
> By working together, and with the help of Almighty God, we can win the peace with its rich rewards for all our people and for those all over the world who cherish liberty.

Labour Unity

The convention went on record as favouring continued efforts toward labour unity in the United States. The resolution supporting the Congress' efforts towards unity reads as follows:—

> This Convention approves President Murray's unity proposal.
>
> We note with satisfaction the progress that has already been made in the direction of labour unity. We endorse the actions taken by the members of the CIO Unity Committee and authorize and direct the Committee to continue to meet with the representatives of the AFL and other *bona fide* labour organizations, looking forward to the attainment of the cherished goal of every union member: the attainment of organic unity of all American labour.

In an address on the resolution, President Murray voiced the hope that unity discussions with the AFL would continue following the conclusion of the Convention and of the steel negotiations which were then in progress. He suggested that it might be possible to broaden the scope of future talks to include spokesmen from "legitimate" unions outside of the two major organizations. The "practical working unity" which had already been achieved on many matters of common concern between the CIO and AFL, at all levels was regarded by Mr. Murray as a reflection of the "grass roots sentiment" favouring unity and showed "a steadily increasing interest in the attainment of organic unity".

CIO Foreign Policy

The Convention reaffirmed the CIO's desire for peace and "all sincere efforts to obtain general disarmament including international control of atomic energy with full powers of inspection." However, the resolution on foreign policy flatly rejected "false peace plans—such as those propounded at the Stockholm, Sheffield, and Warsaw conferences—advanced by the Communists for propaganda purposes to disguise the expansionist aggression of the Soviet Union."

The statement on Foreign Policy also included a declaration on Korea which said:—

> The CIO welcomes this occasion to reaffirm its complete support of our government and the United Nations in the struggle against Communist Aggression in Korea. We renew our pledge in face of the further aggression by the Red Chinese puppets of the Soviet Union.
>
> After the eventual conclusion of the fighting in Korea, a great task lies ahead for the United Nations. Our Government must take the lead in pressing for thoroughgoing measures which will make the reconstruction of Korea an example and inspiration for all Asia.
>
> The false promises and dictatorship of the Communists must be replaced not by discredited feudal regimes but by bread, land, peace and freedom under a United Nations Commission for all Korea.

The Convention also gave strong support to the United Nations and urged affirmative action to aid underdeveloped countries. Support was also given the European Recovery Program (Marshall Plan), European Unity and the recently announced expansion of the U.S. Information Service.

The Congress registered opposition to the granting of American aid to any dictator-controlled country. "The CIO deplores as dangerous to democratic unity and ideals, the granting of economic aid to the totalitarian dictatorships of Franco Spain and Peron Argentina," the resolution said.

Resolutions

The convention passed resolutions expressing the CIO position on many topics. These resolutions—

Endorsed the program of political action sponsored by the Congress;

Approved the CIO legislative program in support of the "New Deal" and the "Fair Deal";

Pledged to continue and increase efforts at organization;

Promised continuance of the fight against the Taft-Hartley Act;

Warned international and local unions to guard against state legislation permitting injunctions in labour disputes;

Demanded full civil rights for all Americans;

Asked for major improvements in old age, survivors' and disability insurance and public assistance;

Asked the United States Congress to strengthen wage-hour and public contracts legislation;

Endorsed the policies of the International Confederation of Free Trade Unions.

Election of Officers

President Murray was unanimously elected to his eleventh consecutive term as president of the CIO. There were no other candidates for the position, and Mr. Murray received an acclamation. James B. Carey was re-elected as Secretary-Treasurer of the organization, and vice-presidents elected were: Alan S. Haywood, J. A. Beirne, L. S. Buckmaster, Joseph Curran, O. A. Knight, Walter Reuther, Emil Rieve, Frank Rosenblum and Michael J. Quill. In addition to these officers, the Convention also elected its Executive Board for the coming year.

AMERICAN TRADE UNIONS AND TECHNICAL ENGINEERING SERVICES

A recent article in the International Labour Review describes the development by certain unions of technical engineering services, to aid them in bargaining with management on problems of job evaluation, wage incentive plans, and other technical matters.

While for the greater part of their history trade unions in the United States "have had no use for, and in fact have feared, the engineering approach to work problems in the plant," they are tending more and more to employ technicians in their own behalf, according to an article in a recent issue of the *International Labour Review* of June.

The author, Solomon Barkin, is Director of Research for the Textile Workers' Union of America (CIO). In the article he first sketches the history of the trade union attitude towards "scientific management" in the United States, and towards the engineering experts who are instrumental in developing its techniques. He then explains the reasons behind the change in union attitude towards technicians, and finally illustrates the work of their engineering units by a description of the technical service which he has built up in his own union.

Because of the unions' inherent suspicions of the scientific approach to industrial production, rates of pay, conditions of employment, job duties and assignments, etc., the growth of the technical engineering service has been the slowest of all union staff services, the author points out.

Primarily, the unions' concern has been centred around the establishment of basic terms of employment rather than controls over shop or production practices. It has not proved expedient to employ an adviser on industrial engineering problems in

negotiating a basic wage schedule or general wage increases or even improvements in so-called fringe benefits (such as holiday and vacation payments, Christmas bonuses, employer's social security contributions, etc.).

Antagonism Towards Scientific Management

Generally speaking, the writer comments, "labour's common attitude has been that management has been too aggressive in promoting efficiency and frequently too indifferent to the effect of job changes on the workers."

In fact, management has been more technique-conscious, and it was the introduction of the industrial engineer into the plant which created antagonisms among unions against "scientific management." From the outset, organized labour regarded this policy as anti-union. "Scientific management," according to the article, "was described as a monster which put workers at the employers' mercy and stripped them of their principal bargaining weapon—skill."

Wage incentive systems based on time study, argued the unions, "pitted workers against each other in an inhuman and suicidal contest," and meant endless industrial changes, unstabilized industry, unemployment and lower earnings. The unions insisted further that time and motion studies were neither scientific nor fair in the determination of tasks or the fixing of rates, but merely gave mathematical expression to the wishes and attitudes of management.

When, during the 'twenties, "advanced" employers integrated industrial engineering techniques with psychological tests, welfare programs and company unions, labour leaders became even more sceptical as to the worth of management techniques. Later, under the aegis of government protection, workers by the million organized trade unions, and wherever possible they did away with time studies, wage incentives, psychological and medical tests, and merit rating of workers.

Change in Union Attitude

In time, however, many workers accommodated themselves to the techniques of scientific management and began to see in them certain advantages. Some union leaders mastered the techniques with a view to protecting workers and extending the benefits derived from the innovations. The contribution which scientific management made to over-all efficiency during the first World War also influenced many labour leaders. Samuel Gompers, President of the American Federation of Labour, declared at the end of the war that "the trade union movement welcomes . . . every device and readjustment that will make expended effort more valuable to humanity."

Gompers along with others advocated joint consultation between workers and employers on industrial innovations, the author states. In 1925, the Federation revised its wage policy to reflect the conclusion that the major sources of rising income and wages were higher productivity and the elimination of waste.

Organized labour in the 'thirties was too engrossed in getting trade unions established to show much interest toward the technical approach in the factory. Positive co-operation was not revived until the second World War when labour united for an all-out production effort. Some unions which had formerly fought the principles of scientific management now accepted them; others went further in advocating their extension.

With the unions' general reversal of attitude towards the technical approach, interest in securing engineering advisory services increased. The demands for such services multiplied as the difficulties increased at the local level in dealing with employers' proposals. As the recognition of the need for assistance has grown, various unions have established their own technical services.*

Requisites in Organizing a Technical Service

Turning to the service which he organized in the Textile Workers, the author first offers several suggestions regarding the undertaking of a technical service within a union. First, the staff must consist of permanent personnel and not of consultants, the reason being that engineering consultants have been trained in management's approach and could not therefore maintain an undivided loyalty to the trade union.

Permanency is considered a prerequisite for the personnel if they are to acquire the ability to formulate complaints carefully and accurately, to give documented expression to the workers' general dissatisfaction and to handle specific technical grievances.

* The article cites three unions as having national technical staffs. These are the International Ladies' Garment Workers' Union (AFL), the Textile Workers' Union of America (CIO), and the United Automobile Works of America (CIO).

Secondly, a union's technical service must be properly integrated with its economic staff. Management techniques, as the article explains, are designed to meet economic issues. Engineering and management data and findings are materials used in the discussion of such problems as earnings and wage rates, work-duties and man-hour requirements, and have no independent significance in collective bargaining. "The technical service must serve the union's negotiators in the same manner in which the management uses its technicians," the writer states.

Functions of Textile Workers' Service

In the case of the Textile Workers' technical service, its primary function is to aid and train the union's administrative personnel in the handling of problems of an industrial engineering character.

Among its advisory functions, the Textile Workers' technical staff includes assisting the union to develop its policy on worker effort, technological job and work assignment changes, time study, wage incentive plans, job evaluation, merit rating and the technical conditions in the mill.

A major service function of the union's technical staff is to aid in the application of the above policies with a view to solving specific problems at each level of operation. Included among the four service functions of the engineering staff are aid in union organizing, in contract negotiations, in the handling of specific jobs grievances under an existing contract and in arbitration proceedings.

Other functions include education and training of union business agents and union members of textile industry joint boards; the printing and distribution of information on a variety of subjects; interpretation of developing technology; assistance to management in adjusting to new trends; encouragement of mill safety and health; and education of the public and employers.

In connection with the last mentioned function, the writer states that the Textile Workers' Union staff considers it fundamental to encourage others to devote greater critical study to and appraisal of the materials in this field of technical engineering.

British Unionists Advocate Technical Services

In Britain ten trade union officials stated that it is time for big unions and federations to engage their own production engineers, according to the August issue of *Labour*, a publication of the Trades Union Congress.

The officials proposed that the Congress itself should employ staff to aid unions in setting up production departments and to give technical assistance to unions too small to afford their own experts.

Included among the officials are presidents, general secretaries, executive committee members and divisional organizers of ten important unions in engineering, mining, building and textiles.

While the unions to which these officials belong are not committed to the views expressed by the latter after independent investigations, there is ample evidence, the magazine states, that the idea of consulting and even appointing specialists is steadily gaining favour among British unions.

Workers contend that their industries must be up-to-date and efficient if full employment is to remain and the standard of living to rise. They have therefore resolved to assist, through their unions, any efforts to increase productivity.

As to the methods, the officials in their report stated that where managements are progressive in modernizing workshops and improving production methods, trade unionists must be prepared to understand the innovations, to see the advantages and drawbacks of proposals arising out of joint consultation, and to ensure that earning opportunities are increased rather than the opposite. Where, on the other hand, managements are content with outmoded methods that keep prices high, unions must be prepared to take the initiative in stepping up efficiency.

To achieve these goals, the officials proposed that explanatory week-end and summer school courses on the economics of full employment would help the trade unionist to see his own industry against the background of his country's economic situation.

To deal effectively with the day-to-day problems of the worker, workshop representatives must be trained in production techniques and be able to offer practical and realistic criticisms at meetings of the works committee. The training should be done by a staff of technical experts if the union can afford this expense.

The task of the Trades Union Congress, say the officials, should be to give help and guidance in the formation of the new departments mentioned above and to give direct services to unions not yet in a position to add to their own staffs.

THE SHORTER WORK WEEK

Wartime experience in both Great Britain and the United States supports the conclusion that the six-day, forty-eight hour week is the maximum for efficiency in war production. This is one of the conclusions reached in a National Industrial Conference Board study summarized below. The report notes, however, that different results might occur from the inauguration of this work week in peacetime.

In presenting their survey, *Economics of the Work Week*, the authors Herbert R. Northrup and Herbert R. Brinberg note that the movement for shorter working hours in America has a long history, dating back before "the full flowering of the factory system in the United States." The first move was toward the "sunup to sundown" working day, followed by agitation for a day from 6 a.m. to 6 p.m. By early in the nineteenth century, working people were asking for the ten-hour day, and between 1840 and 1860, a ten-hour day was being increasingly adopted.

By the close of the American Civil War, there was a growing demand for an eight-hour working day. While the eight-hour day was by no means standard in 1900, the first two decades of the century saw swift progress towards this objective. In 1900 the average weekly hours worked in all industry was 57·3; by 1920 this had decreased to 50·4.

The great depression which began in 1929, was responsible for drastic reductions in working hours. Employers cut hours and "instituted share-the-work programs, so that the reduction in hours between 1930 and 1933 represented a loss rather than a gain in material well-being."

It was not until the passing of the Fair Labour Standards Act in 1938, that the forty-hour week became national policy in the United States. The Act established a forty-four-hour-weekly maximum to become effective in 1938; and then successive reductions to forty-two hours in 1939, and forty hours in 1940. However, the Act was not universal in its coverage and "as originally written . . . was estimated to exclude either by general or specific exemptions, more than one-half the labour force."

While the World War I trend was towards reduced hours, the requirements of war production during World War II forced "a sharp increase" in working hours. The study notes that:—

"The wartime interruption of the downward trend in hours, however, was only temporary. Throughout World War II, the overtime provisions of the Fair Labour Standards Act remained in effect, and time and one-half was paid for all work in excess of forty hours a week. When hostilities ended, the forty-hour week again became the standard. Moreover, industries which were not covered by the hours provisions of the Act, such as air transport in 1945, railroads (non-operating employees) in 1949, and some units of retail trade went on the forty-hour week for the first time."

Trends From 1945 to 1949

Since the end of World War II, agitation for even shorter working hours has fluctuated. In 1945, President William Green of the AFL stated that "so long as there is one man who seeks employment and cannot find it, the hours of labour are too long." The restatement of this principle, originally laid down by Samuel Gompers, was occasioned by the fear, prevalent at the time, of a post-war recession. Mr. Green expressed the opinion that the six-hour day and the thirty-hour week would become "an economic necessity," in order to lessen the threat of unemployment.

The expected recession did not materialize, and "attention was turned to the desirability of increasing work schedules as a means of dampening inflation."

Early in 1949, there was again the threat of a recession and "labour once again began to discuss and press toward a shorter work week, with a thirty-hour week the aim. . . . As soft spots began to appear in various sectors of the economy, union leaders, especially those of AFL and independent unions . . . commenced advocating shorter hours of employment."*

* This study was released in April, 1950, and therefore has no information concerning trends in hours since the American preparedness program has started to move into high gear.

Arguments for Shorter Hours

The study discusses the four principal arguments advanced for shorter hours. These are:—

1. Shorter hours improve the health of the population;
2. Shorter hours allow for increased leisure, which in addition to being salutory in itself also permits workers to purchase and enjoy the products of industry;
3. Shorter hours increase worker efficiency enough to offset less work time;
4. Shorter hours are necessary to insure full employment.

Health and Leisure

In the United States, regulations on hours for women, hours in dangerous trades, and hours in transportation have been based chiefly on health reasons. In transportation, the purpose of these regulations is to protect "the health and safety of the consumer as well as that of the worker. . . ."

The survey states:—

> The arguments based on health are more applicable to a longer work week than forty hours. Consequently, the proponents of a work week shorter than forty hours do not use the health argument much except in the cases of particularly dangerous or strenuous trades or occupations.
>
> The effect of hours of work on the accident rate has been the subject of a number of studies, but these studies have two distinct limitations. First, no definite measurement is utilized by the studies, especially in comparing different types of work which subject workers to different risks of injury and different degrees of physical exertion and nervous strain. Second, the studies pertain to situations in which the work week was lengthened over a previous standard which was at least forty hours. In general, the results of these studies indicate a direct correlation between increased hours and accident rates, especially when the hours worked are increased beyond fifty per week and ten per day.
>
> It should be noted however, that the effect of increasing hours from a previous norm is something different from the effects which might occur from decreasing hours from a given norm. For example, if hours were reduced from forty to thirty, there is no proof that the accident rate would fall to any appreciable degree. On the other hand, if workers were accustomed to thirty hours, and the work week were suddenly increased to forty, adverse effects on the accident rate might well occur. This could happen because the living habits of people would be upset, meaning unsteady nerves and reduced alertness to accident hazards. Also it is possible that the tempo of production would be increased under a thirty-hour week. The effect of an increase in hours from thirty to forty could then induce excessive fatigue and more accidents.

Purchasing Power Theory

Proponents of shorter hours have maintained that "with the increased leisure which would come with the adoption of the thirty-hour week, and with the increased purchasing power which would come from the maintenance of earnings, the workers would have time and money to function as consumers of the products of industry."

As an example of current thinking among labour men on this subject, a statement is quoted in the study from the report of the AFL shorter work week committee. This report stated: "If the economy is to remain sound over the long run, our developing productivity and technology must be leisure providing as well as labour saving and must lead to shorter hours and higher living standards for all, rather than unemployment for a growing number." Another argument which is not now as prevalent as formerly, is that shorter hours encourage greater participation in political and civic affairs.

The survey makes the following statement on the purchasing power theory:—

> Since the average worker spends the bulk of his income on consumption goods, it may well be that he is about as good a customer for the non-essential items of industrial production as can be expected. Moreover, this leisure argument assumes, first, that the increased costs resulting from decreasing the hours will not adversely affect employment and therefore, in turn, adversely affect consumer expenditures; and second, it also assumes the shorter-hour movement will not be simply a device to increase overtime pay. Where actual hours are not reduced, but merely made more expensive by penalty overtime payments, the increased leisure argument is irrelevant; for here the workers' take-home pay, not the workers' leisure, is increased.

Efficiency and Productivity

It has been found that, "historically the reduction in hours of work has been accompanied by increases in productivity." The survey's definition of productivity is not necessarily synonymous with that of efficiency.

> Productivity is not a measure of the man alone, but of the man and his equipment. It is a statistic commonly measured by dividing output by man-hours worked. Rising labour productivity is largely a manifestation of the joint contribution of increasing capital, improved managerial technique, and scientific advance. Thus the doubling of real output per man-hour between 1900 and

1940 . . . was not primarily the result of greater (physical) effort. People did not work twice as hard in 1940 as in 1900. If anything, their work was less arduous and it was done under better working conditions. The important point is that, in combination with much more plant and equipment . . . (labour) produced twice as much per hour.

On the other hand, labour efficiency, as defined here, refers to changes in output resulting solely from changes in labour effort or input, other factors being held constant. Hence an increase in labour efficiency will result in an increase in productivity; but an increase in productivity does not necessarily mean that labour efficiency has increased.

The more important studies on the effect of hours on labour efficiency were made during World War II, under abnormal conditions. Those available also deal mainly with increases in hours above forty, rather than below forty per week.

In summarizing these studies, the authors have noted the following reservations:—

Patriotism undoubtedly increased worker efficiency when, under normal conditions, efficiency might have been less at longer hours.

In converting to war production, some companies installed improved machinery which increased productivity simultaneously with changes in work schedules.

Firms frequently lost key personnel to the armed services, and nearly all firms which expanded were staffed with unskilled and inexperienced labour.

Shortages of raw materials plagued many firms during the war and post-war periods.

During World War II some plants in the United States, and a larger proportion in Britain adopted a full seven-day week, with hours ranging from fifty-four to seventy-two. This compared with an American pre-war standard of a five-day, forty-hour week, and a British standard of a six-day, forty-eight-hour week. According to the survey, results were very similar.

For a time after the longer schedule was adopted, output increased. Then, as fatigue accumulated, weekly output fell to levels existing before the change, or even below that. Workers were found to have a tendency to pace themselves under different work schedules in order to avoid extreme fatigue. Where workers had no control of the speed of work, output increased under the seven-day week, but so did spoilage, sickness and absenteeism. The unanimous conclusion of all studies was that the seven-day week and hours of sixty or more a week reduced the efficiency of labour and were uneconomical for business.

The study summarizes the results of a survey made by the Bureau of Labour Statistics, which found:—

In a majority of cases, the shift from the forty-hour, five-day week to the forty-eight hour, six-day week was accompanied by an increase in output directly proportional to the increase in hours, and in all cases output increased to some extent. In the two cases in which a partial day rather than a full day was worked on Saturday, the increases in output were less than proportional to the increase in hours. This was also the case in a minority of the plants that shifted from the forty to the forty-eight hour week. However in all cases but five, the war emergency, the existence of wage incentives in a number of the plants, and, in some instances, the fact that production was at a moderate pace prior to the increase in hours prevented resentment on the part of the workers as well as excessive fatigue and the consequent lowering of efficiency. There was one instance in which female labour efficiency declined in the change from forty to forty-eight hours.

However, while there was a general increase in productivity, there was also an increase in the rate of absenteeism especially among women employees, following the addition of the sixth working day.

The conclusion reached regarding the increase from a five to a six-day week is that "the addition of the sixth day had no disadvantageous effect on output, provided daily hours were held to eight." Other studies support the conclusion that the forty-eight hour week was best for war production, and that adding the sixth day had no ill effect unless the daily hours were excessive. It should be noted again, however, that different results might occur if the six-day week were inaugurated in peacetime.

Following the war, when hours were again decreased, it was found that "a decrease in hours was accompanied by less than a proportionate decrease in production." In all cases except one, the decrease in hours was accompanied by an increase in efficiency. The change in hours had little effect on the absentee rate among male employees, but women's absences increased.

The report concludes:—

The most logical explanation advanced for the observed improvement in efficiency as hours of work were reduced was that workers who were paid on an incentive basis wished to make up lost take-home pay brought about by the elimination of time and a half for the sixth day.

In general, industries where work was of the heavy, exhausting type profited most by a reduction from the forty-eight to the forty-hour week. The BLS study also supported the view that, although the 48-hour week, eight-hour day is the maximum for efficiency, the forty-hour week, eight-hour day is the optimum work schedule.

WAGE INCENTIVE SCHEMES IN BRITISH INDUSTRY

Wage incentive schemes, other than straight piece rates, were in effect in 30 per cent of the establishments surveyed by the British Ministry of Labour. Such schemes were much more common in large than in small firms.

In a separate survey of incentive schemes in building, the Ministry of Works reached the conclusion "that where schemes were operated with enthusiasm, output was substantially increased, cost reduced, and the men's earnings supplemented."

In the spring of 1950 enquiries into the extent of wage incentive schemes in operation in industry were instituted by the British Government. During a survey of earnings and hours in manufacturing industries generally, and in some of the principal non-manufacturing industries, the Ministry of Labour and National Service obtained some particulars as to the number of establishments operating wage incentive schemes, other than straight piece rates. Incentive schemes in building were surveyed by the Ministry of Works, in association with the Ministry of Health. The results of both enquiries are summarized in the October issue of the *Ministry of Labour Gazette*.

Survey of Industrial Establishments

In the survey of earnings and hours in industry, made in April, 1950, by the Ministry of Labour, employers were asked to state whether they operated for all or part of their employees a wage incentive scheme, other than straight piece rates, designed to encourage increased productivity. Definite answers were supplied by 51,000—nearly 90 per cent—of the establishments from which returns were received. At about 15,500, or 30 per cent, of these establishments wage incentive schemes were in operation for some or all of the employees in April, 1950. The total number of wage-earners at work in these 15,500 establishments in the last pay week in April was about 2,850,000.

Employers were not asked to state the number of workers to whom the schemes applied, nor to distinguish between the different types of schemes. Such schemes were understood to include any systems of payment made in addition to straight time or straight piece rates, which varied according to the output of individuals, groups or departments, or which were based on good time-keeping, merit, avoidance of waste, etc. They also included differential piece rates, which increased or decreased as output rose, and profit sharing and co-partnership. An affirmative answer merely established the fact that a wage incentive scheme of some unspecified kind was in operation for all or some of the employees at the establishment concerned.

Referring to the exclusion of the straight piece-work system, the report says: "This system, the essence of which is a uniform price per unit of work over the whole output, is of course one of the most important of the methods of payment by results. It is to be distinguished from differential piece work, under which the rates per unit of work may be either 'progressive', *i.e.*, increasing as the output increases, or 'regressive', *i.e.*, decreasing as the output increases." In previous enquiries the number of wage-earners paid by time rates and piece rates, or other systems of payment by results, have been ascertained, it is pointed out. The enquiry of April, 1950, therefore, covers different ground from those of earlier dates "in that it includes systems of payment, such as good time-keeping bonuses, merit payment and profit sharing, which are not directly related to output; but excludes the system of straight piece work, which is very closely connected with output."

(An enquiry made in October, 1949, into the extent of payment-by-result schemes, including straight piece rates, showed that in 33 per cent of the establishments reporting, some such system was in operation, covering 31 per cent of the wage-earners.)

A breakdown of the figures for all industries combined according to size of establishment is given in the table included in this synopsis.

While, as explained, the information available does not give any indication of the proportion of wage-earners covered by wage incentive schemes, the table shows that the proportion of establishments oper-

ating schemes increases markedly as the size of the establishment rises. Consequently, while the total number of establishments with no incentive schemes in operation is more than double that of those with schemes, the aggregate numbers of wage-earners are similar.

The percentage of establishments operating wage incentive schemes varied widely between industries. Figures ranged from less than five per cent in the two industries, Gas and Electricity, to over 80 per cent in three industries—Glass Container, Stationary Engine, and Linoleum and Leather Cloth Manufacturing. More than half of the industries showed percentages of between 25 and 55. Percentages above these figures were principally in the Metal Manufacture and the Engineering, Shipbuilding and Electrical Goods groups.

Surveys of Incentives in Building

The survey conducted by the Ministry of Works showed that of the 158 direct labour forces engaged on new housing in the spring of 1950, and employing 14,000 men, 96 employing 10,339 men operated schemes based on output achieved in relation to agreed targets. While results of the schemes vary, the report says that a very large proportion are achieving their objectives. "The general effect of the incentive schemes on output and costs," it states, "is difficult to assess from an enquiry of this nature, but the report indicates that where schemes were operated with enthusiasm, output was substantially increased, cost reduced, and the men's earnings supplemented."

It is noted also that the recent Working Party, appointed to enquire into the organization and efficiency of building operations in Britain, reached the conclusion that incentive payments in building are essential to adequate increase in output.

The Ministry of Works survey covered schemes operated by direct labour forces of local authorities throughout England and Wales, and was confined to new housebuilding since this comprises the bulk of the building undertaken by direct labour. The report, it is explained, is not, therefore, a statistical assessment of the effects of incentives on building efficiency generally, nor is it intended to convey any particular impression of the working of direct labour organizations as such.

It was estimated by 83 local authorities that the schemes had resulted in increased output and by 80 that reductions in labour costs had been achieved; 86 stated that the men's earnings had been increased. Detailed evidence from 67 authorities showed average bonus earnings of 15 to 20 per cent of basic wages, and from 32 authorities an average increase of 27 per cent in output on bonused work, and an average saving of 7 per cent in labour costs.

In some schemes the increase in output was quite small, particularly taking into account the output of the men as a whole, but the highest estimated overall increase was 43 per cent. The range was even wider in particular trades, and the increase in output varied from 22 to 112 per cent.

The estimates of reduction in labour costs also varied widely. Some reductions of 25 per cent were claimed, representing over £100 per house. In particular trades, notably brickwork, savings of up to 45 per cent were claimed.

The average bonus paid on the 67 schemes reported on was 5d. per hour. Bonuses varied from 1d. to 1s. 8d. Craftsmen generally earned from 3½d. to 6½d.; tilers tended to earn slightly less and plasterers slightly more. Labourers, mainly owing to the fact that the bonus is usually based on their lower hourly wage rates, earned somewhat less—between 3d. and 5½d. per hour. Payment of bonus at weekly intervals, it is stated, was regarded as desirable by a majority of local authorities, and was made in 61 of the 96 schemes.

In 34 schemes, all the men directly employed on the job were covered; in 57 others the schemes covered only the main trades or operations.

The figures given for improvement in output, savings in labour costs, and bonus earnings, the report stresses, refer usually only to the time during which men were engaged on bonused work, as experience shows that it is difficult to include more than a proportion of the men's time on such work. The overall effect on output, therefore, and consequently on labour costs and bonus earnings, will on the average have been less than that indicated by the figures given.

Few local authorities covered by the survey have succeeded in bonusing maintenance work, which presents special difficulties. This problem, it is noted, is being explored by the Ministry of Works.

The labour forces operating incentive schemes were found to be larger than those having no schemes; the average number of men engaged on new housing in the former was 101. It is clear, the report says, that the larger forces have found themselves to be in a better position to initiate schemes than the smaller forces.

The report records various difficulties in the way of incentive schemes, such as lack of suitable operating staff, but it also shows

that these difficulties have frequently been overcome. Half of the schemes were operated in conjunction with joint production committees, usually composed of members of staff and operatives of the direct labour forces. In most of the remaining schemes the men were brought into discussion before and during the operation of the scheme.

Typical Incentive Schemes

Particulars of two typical incentive schemes in operation are given in an appendix to the report. In the first scheme, the estimated labour cost for each item is extracted from the priced bills of quantities and these are grouped to form labour cost or man-hour targets for between 30 to 40 operations on a pair of houses. The targets are agreed with the men and the men's time is allocated during the week to the tasks on which they are engaged so that when each task is completed the actual labour cost is known. Each week an assessment of the tasks completed by each trade is made. The actual labour cost is deducted from the target cost and the men are entitled to two-thirds of any saving. The bonus earned is shared in each trade or gang in accordance with the wage rate and the hours worked of each man, and is usually paid out in the week following the completion of the tasks. This type of scheme has the advantage that each gang or trade has a direct incentive, and it provides the basis for the costing of the work as it proceeds; but it does demand the allocation of the men's time to particular tasks and the calculation of the bonus earned on each.

The second scheme quoted is similar in principle to the first but is on a much broader basis. The agreed target labour cost for a pair of houses is broken down into a number of stages and the percentage of the total labour cost is worked out for each stage. These figures form the basis for assessing the target value of work done each month. The wages paid during the month are deducted from the target labour cost and the men are paid as bonus 75 per cent of any saving achieved. All men on the site are covered and the bonus is distributed in equal shares to craftsmen and labourers in accordance with the hours worked by each. It is pointed out that this type of scheme is simple to operate but demands careful preparation at the commencement of the job. A part of the incentive may be lost because all men share equally in the bonus, irrespective of the relative contribution of each gang. Also, the scheme does not provide much useful information for future estimating.

Industrial Relations and Conciliation

A dispute involving longshoremen engaged in coastwise shipping operations on the West Coast was settled during November by a Conciliation Officer. Other officers were assigned by the Minister of Labour to deal with disputes affecting a number of widely separated industries.

Introduction

During November and the early part of December, the Minister of Labour appointed Conciliation Officers to deal with seven industrial disputes in widely separated parts of Canada.

The first of these involved a dispute between Canada Coach Lines Limited, of Hamilton, Ontario, and its employees represented by Local Union 1454 of the Amalgamated Association of Street, Electric Railway and Motor Coach Employees of America. The Union had been certified on August 11, 1950, as the bargaining agent for approximately 300 employees of the Company. On November 2, the Minister of Labour appointed an Industrial Relations Officer to confer with the parties and endeavour to secure an adjustment. It was reported that the main point of contention involved the rate to be paid to drivers for lay-over time. Several previous collective agreements between the Company and an Employees' Independent Union had provided for the payment of straight time rates of wages for lay-overs, but the employer contended that these provisions had worked a hardship and proposed that a reduction to approximately half-time pay be adopted for lay-overs. Proposals for wage increases put forward by the Union were also major items in dispute. No agreement was found possible by the Conciliation Officer and on November 17 the Minister of Labour appointed a Board of Conciliation and Investigation to consider the dispute.

The other cases in which Conciliation Officers were appointed were still in the mediation stage at the time of writing. These include disputes between the Abitibi Coach Lines and Transportation Company Limited, Val D'or, Quebec, and the Canadian Brotherhood of Railway Employees and Other Transport Workers; Smith Transport Limited, Montreal, Quebec, and Local No. 106, Transport Drivers, Warehousemen and Helpers' Union of the International Brotherhood of Teamsters, Chauffeurs, Warehousemen and Helpers of America; Yukon Consolidated Gold Corporation limited, Dawson, Y.T., and Local 564, International Union of Mine, Mill and Smelter Workers; Trans-Canada Air Lines and the Canadian Air Line Pilots' Association; the Alberta Wheat Pool and employees of its Elevator Department at Vancouver, B.C., represented by Grain Elevator Workers, Local 333 of the International Union of United Brewery, Flour, Cereal, Soft Drink and Distillery Workers of America; Robin Hood Flour Mills Limited, Saskatoon, Saskatchewan, and Local 342, Flour and Cereal Workers' Division of the United Packinghouse Workers of America.

The settlement of a dispute by a Conciliation Officer was reported during November. The case involved longshoremen employed by members of the coastwise section of the Shipping Federation of British Columbia, namely, Canadian National Steamships, the British Columbia Coast Steamship Service of the Canadian Pacific Railway Company, Frank Waterhouse of Canada, Limited, Packers Steamship Company Limited and Union Steamships Limited. The employees were represented by Local 38-163 of the International Longshoremen's Association.

No developments occurred during the period under review in connection with the dispute involving the major Canadian railway systems and the two groups of unions representing their non-operating employees. It was anticipated, however, that the decision of the Hon. Mr. Justice Kellock, the arbitrator appointed in accordance with the provisions of The Maintenance of Railway Operation Act, would be made public during the month of December.

This section covers proceedings under two federal statutes, the Industrial Relations and Disputes Investigation Act and the Conciliation and Labour Act, involving the administrative services of the Minister of Labour, the Canada Labour Relations Board and the Industrial Relations Branch of the Department.

The following statement concerns the scope and administration of the Industrial Relations and Disputes Investigation Act and the Conciliation and Labour Act.

Conciliation services under the Industrial Relations and Disputes Investigation Act and under the Conciliation and Labour Act are provided by the Minister of Labour through the Industrial Relations Branch. The Branch also acts as the administrative arm of the Canada Labour Relations Board under the former Act.

The Industrial Relations and Disputes Investigation Act came into force on September 1, 1948. It revoked the Wartime Labour Relations Regulations, P.C. 1003, which became effective in March, 1944, and repealed the Industrial Disputes Investigation Act, which had been in force from 1907 until succeeded by the Wartime Regulations in 1944.

Proceedings begun under the Wartime Regulations are continued in so far as the services involved in such proceedings are authorized under the new Act. Likewise, decisions, orders and certifications given by the Minister of Labour and the Wartime Labour Relations Board are continued in force and effect by the new Act.

The Act applies to industries within Dominion jurisdiction, i.e., navigation, shipping, interprovincial railways, canals, telegraphs, interprovincial and international steamship lines and ferries, aerodromes and air transportation, radio broadcasting stations and works declared by Parliament to be for the general advantage of Canada or two or more of its provinces. Additionally, the Act provides that provincial authorities, if they so desire, may enact similar legislation for application to industries within provincial jurisdiction and make mutually satisfactory arrangements with the Dominion Government for the administration of such legislation.

The Minister of Labour is charged with the administration of the Act and is directly responsible for the appointment of Conciliation Officers, Conciliation Boards, Industrial Inquiry Commissions for the consideration of complaints that the Act has been violated or that a party has failed to bargan collectively, and of applications for consent to prosecute.

The Canada Labour Relations Board is established under the Act as successor to the Wartime Labour Relations Board to administer provisions concerning the certification of bargaining agents, the writing of provisions—for incorporation into collective agreements—fixing a procedure for the final settlement of disputes concerning the meaning or violation of such agreements and the investigation of complaints referred to it by the Minister that a party has failed to bargain collectively and to make every reasonable effort to conclude a collective agreement.

Copies of the Industrial Relations and Disputes Investigation Act and the Rules of Procedure of the Canada Labour Relations Board are available upon request to the Department of Labour, Ottawa.

Conciliation services are also provided by the Industrial Relations Branch under the provisions of the Conciliation and Labour Act. This statute empowers the Minister of Labour to inquire into the causes and circumstances of a dispute, to take such steps as seem expedient for the purpose of bringing the parties together, and to appoint a conciliator or arbitrator when requested by the parties concerned.

Proceedings under the Industrial Relations and Disputes Investigation Act are reported below under two headings: (1) Certification and other Proceedings before the Canada Labour Relations Board, and (2) Conciliation and other Proceedings before the Minister of Labour. From time to time, as required, a third article under this section will cover Conciliation Proceedings under the Conciliation and Labour Act.

Industrial Relations Officers of the Department of Labour are stationed at Vancouver, Winnipeg, Toronto, Ottawa, Montreal, Fredericton and St. John's, Newfoundland. The territory of two officers resident in Vancouver comprises British Columbia and Alberta; two officers stationed in Winnipeg cover the provinces of Saskatchewan and Manitoba and Northwestern Ontario; three officers resident in Toronto confine their activities to Ontario; two officers in Montreal are assigned to the province of Quebec, and two officers resident in Fredericton and St. John's represent the Department in the Maritime Provinces and Newfoundland. The headquarters of the Industrial Relations Branch and the Director of Industrial Relations and staff are situated in Ottawa.

Certification and Other Proceedings Before the Canada Labour Relations Board

The Canada Labour Relations Board met for one day during the month of November. The Board issued six certificates designating bargaining agents and rejected one application for certification. During the month the Board received seven applications for certification.

Applications for Certification Granted

1. Hotel and Restaurant Workers, Local No. 779, Hotel and Restaurant Employees and Bartenders International Union, for a unit of employees of the Canadian National Railways employed in the Newfoundland Hotel, St. John's, Nfld. (L.G., Dec., 1950, p. 2051).

2. The National Seamen's Association of Canada, for a unit of unlicensed personnel employed on vessels owned and operated by Keystone Transports Limited, Montreal (L.G., Oct., 1950, p. 1669).

3. The West Coast Seamen's Union (Canada), for a unit of unlicensed personnel employed in the deck, engineroom

and steward's departments of deepsea dry cargo vessels of Canadian registry owned or bareboat operated by the Western Canada Steamship Company Limited, Vancouver (L.G., Nov., 1950, p. 1891).

4. The West Coast Seamen's Union (Canada), for a unit of unlicensed personnel employed in the deck, engineroom and steward's departments of deepsea dry cargo vessels of Canadian registry owned or bareboat operated by Johnson, Walton Steamships Limited, Vancouver (L.G., Nov., 1950, p. 1891).

5. Local No. 882, International Union of Operating Engineers, for a unit of engineers employed by Central Mortgage and Housing Corporation in the operation and maintenance of its steam heating plants at Park Crescent, New Westminster, B.C. (L.G., Nov., 1950, p. 1892).

6. The Canadian Brotherhood of Seamen, for a unit of unlicensed personnel employed by the Western Union Telegraph Company on board the cs. *Lord Kelvin* and the cs. *Cyrus Field,* operating out of Halifax (L.G., Nov., 1950, p. 1891).

Application for Certification Rejected

Division No. 1229, Amalgamated Association of Street, Electric Railway and Motor Coach Employees of America, affecting employees of Island Transport Limited, Charlottetown, P.E.I. (L.G., Dec., 1950, p. 2051). The application was rejected for the reason that the Association did not have the support of a majority of the employees affected. The decision was made without prejudice to the question of jurisdiction upon which the Board made no finding.

Applications for Certification Received

1. The Canadian Merchant Service Guild, Inc., on behalf of masters employed by the Saint John Tugboat Company Limited, Saint John, N.B. (Investigating Officer: H. R. Pettigrove).

2. The Brotherhood of Locomotive Engineers, on behalf of locomotive engineers and hostlers handling steam and other classes of motive power employed by the Canadian National Railways in its Newfoundland District (Investigating Officer: L. Pepin).

3. The Canadian Merchant Service Guild, Inc., on behalf of licensed navigating officers employed by the Westward Shipping Company Limited, Vancouver, on board the mv. *Standard Service* and mv. *B.C. Standard* (Investigating Officer: D. S. Tysoe).

4. Malt and Grain Process Workers, Local No. 105, International Union of United Brewery, Flour, Cereal, Soft Drink and Distillery Workers of America, on behalf of employees of the McCabe Grain Company Limited, Winnipeg, employed in the Company's seed cleaning plant at St. Boniface, Manitoba (Investigating Officer: J. S. Gunn).

5. International Union, United Automobile, Aircraft and Agricultural Implement Workers of America, on behalf of employees of the British Overseas Airways Corporation employed in No. 4 hangar at Dorval, P.Q. (Investigating Officer: C. E. Poirier).

6. Local No. 955, International Union of Operating Engineers, on behalf of steam engineers, firemen and maintenance men employed by the Canadian National Railways in the MacDonald Hotel, Edmonton (Investigating Officer: G. R. Currie).

7. The Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees, on behalf of news-stand attendants employed by the Canadian Pacific Railway Company (British Columbia Coast Steamship Service). (Investigating Officer: D. S. Tysoe).

Conciliation and Other Proceedings Before the Minister of Labour

During the month of November the Minister appointed Conciliation Officers to deal with disputes between the following parties:—

1. Local No. 1454, Amalgamated Association of Street, Electric Railway and Motor Coach Employees of America, and Canada Coach Lines Limited, Hamilton (Conciliation Officer: F. J. Ainsborough).

2. The Canadian Brotherhood of Railway Employees and Other Transport Workers and the Abitibi Coach Lines and Transportation Company Limited, Val D'Or, P.Q. (Conciliation Officer: L. Pepin).

Settlement Effected by Conciliation Officer

During the month the Minister received a report from G. R. Currie, Conciliation Officer, indicating the settlement of matters in dispute between Local 38-163, International Longshoremen's Association, and the Shipping Federation of British Columbia, representing Canadian National Steamships.

Canadian Pacific Railway Company (B.C. Coast Steamship Service), Frank Waterhouse of Canada Limited, Packers Steamships Company Limited, and Union Steamships Limited (L.G., Dec., 1950, p. 2053).

Conciliation Board Appointed

On November 17, 1950, the Minister appointed a Board of Conciliation and Investigation to deal with matters in dispute between Canada Coach Lines Limited, Hamilton, and Local No. 1454, Amalgamated Association of Street, Electric Railway and Motor Coach Employees of America. The Board was appointed following receipt of the report of F. J. Ainsborough, Conciliation Officer (see above). Constitution of the Board had not been completed at the end of the month.

Recent Decisions of Canadian Railway Board of Adjustment No. 1

The Canadian Railway Board of Adjustment No. 1 has released its findings in cases heard on July 11, 1950.

Case No. 597.—Canadian Pacific Railway Company (Prairie Region) and the Brotherhood of Maintenance of Way Employees *ex parte*. A dispute concerning the discharge of a bridge and building foreman following a mishap on April 27, 1948.

The engine of a work train hauling a pile driver outfit went through the bridge at Mileage 15.34 on Lloydminster Subdivision. This bridge was to have been repaired by the pile driver outfit in charge of B & B foreman. The company stated that the foreman "had been instructed on the previous day as to the work which he was to do on 27th April." The engine went through the bridge, killing the head end trainman, and seriously injuring the engineer. The company said that "great material damage was done as a result of the mishap." The foreman in question was dismissed.

The company contended, among other matters, that the foreman had been given clear instructions as to the work to be performed and the location of the bridge; and that he had "completely failed to carry out his duties."

The employees claimed that the foreman's instructions in connection with the work to be done had not been in writing; that he had no definite knowledge as to the location of the bridge; that "apparently no orders were given not to proceed beyond defective bridge;" and that the roadmaster and other officers had been "lax in their duties when they travelled over bridge preceding work train knowing there was no flag protection after roadmaster had removed flags."

The decision of the Board sustained the employees' contention.

Case No. 598.—Canadian National Railways (Western Region) and the Brotherhood of Railroad Trainmen. A dispute concerning the assessment of discipline against a trainman in respect to an accident at Warroad, Minn., September 13, 1949.

The Joint Statement of Facts indicated that Extra 3460 left Rainy River for Paddington following another extra (3329) on a 20-minute block. Extra 3460 collided with the rear of extra 3329 at Warroad. The engineman was suspended, and the trainman was assessed with ten demerit marks "for failure to maintain proper lookout while moving through yard limits."

The employees contended that just east of the yard limit board at Warroad, the head end trainman on Extra 3460 witnessed the application of the air brakes by the engineer, and noticed "that the speed of the train when passing the yard limit board was fifteen (15) miles per hour." The engineer then made a second application of the air brakes and reduced speed further to about five miles per hour. "This speed was maintained for several car lengths prior to and while moving over the highway crossing. The rear of Extra 3329 West was three or four car lengths west of the crossing, and the collision occurred at this point."

The employees further contended that the head end trainman "was not negligent in his duties and could not have prevented the accident."

The company contended that Extra 3329 was in the siding at Baudette, and that Extra 3460 West, pulled in to the siding behind it. Extra 3329 then left Baudette for Warroad and had one car to discharge there in "addition to inspecting train and checking by Customs. This work was practically completed and train was just

about ready to leave when the accident occurred." As a result, the engineman was suspended "for his responsibility for the accident." The Trainman "was assessed ten demerit marks for failure to maintain proper lookout while moving through yard limits."

Further oral evidence was presented to the Board by both parties in the dispute.

The Board decided that the "contention of the employees . . . (be) sustained to the extent of payment for lost time."

Case No. 599.—Canadian National Railways (Western Region) and the Brotherhood of Railroad Trainmen. A dispute regarding payment to a yardman at Prince George, B.C., October 13, 1949.

Joint Statement of Facts: The yardman was assigned as helper in the Prince George Yard, and on October 13, 1949 worked as follows:—

Oct. 13, 1949—6.30k to 14.30k—Assigned Helper.
Oct. 13, 1949—17.30k to 1.30k—Oct. 14, 1949—Spare Foreman.

A claim was made for time and one-half pay for the shift worked as spare foreman. Both shifts were paid straight time.

The employees contended that the management had misinterpreted Article 1, clauses (*b*) and (*c*) of the Yardmen's Schedule, and that there was a rule providing that yardmen "would receive compensation at the rate of time and one-half when required to perform a second tour of duty within a 24-hour period."

The company contended that the filling of the yard foreman's vacancy has been handled in accordance with practice in effect at similar points on the Western Region and that no schedule rule has been violated.

In a general statement, the Board held that the case had arisen due to lack of clarity of understanding between the officers of the Railway and representatives of the Brotherhood as to the proper procedure to be followed. The Board therefore recommended that the parties confer together and endeavour to clarify the practices to be followed in the future.

The decision of the Board was that "the contention of the employees . . . (be) sustained without prejudice."

Case No. 600.—Canadian National Railways (Western Region) and the Brotherhood of Railroad Trainmen. A claim by a conductor and two trainmen for "eight hours at yard rates account not being called for duty with self-propelled Clamshell, working within yard limits at Prince George, B.C., on September 29, 1947."

Joint Statement of Facts: Clamshell No. 50061 (a self-propelled unit) was operating on the main track within the yard limits of Prince George, and was protected by a "31 Train Order."

The Clamshell which was in charge of a Concrete Pipe foreman, with several form fitters and one labourer, was used on the main line within yard limits loading sand from a sand bank along the track. A car was used with the self-propelled Clamshell, which car when loaded was moved by the Clamshell from the main line into one of the yard tracks and another empty car secured. No train crew or conductor-pilot was called in connection with this service.

The employees contended that "when Clamshells or Pile Drivers are operated on main track, a pilot is required; or when cars are to be handled or switching is required of the self-propelled unit, a full crew shall be provided."

They cited sections from the rules to support their contention, and also quoted Case No. 163 heard by the Board on June 13, 1923.

The company contended that the Foreman in charge of the Clamshell had written and been examined in both (A) and (B) books and that he was fully qualified to be in charge of the self-propelled Crane while making use of the main track within yard limits; and further that he understood fully the protective measures to be taken in connection with such movements. The company further stated that all movements were protected by Train Order, and that "flag protection (was) provided in accordance with Operating Rules 40-44."

The company also said that on the date in question, no yard crew was available. It contended that "there was no violation of either the company's rules and instructions or of the schedule rules presently in effect. The claim of the employees is not justified either as the result of accepted practices of the Company, or in accordance with schedule rules."

Both parties requested permission to submit further evidence.

In a general statement, the Board said that in its opinion, a pilot should have been used.

The Board sustained the contention of the employees "to the extent of payment for one day's pay at yard foreman's rate to the employees entitled to the call."

Collective Agreements and Wage Schedules

Recent Collective Agreements

A file of collective agreements is maintained in the Economics and Research Branch of the Department of Labour. These are obtained directly from the parties involved and through the Industrial Relations Branch of the Department. A number of those recently received are summarized below.

Agreements made obligatory under the Collective Agreement Act in Quebec and schedules under Industrial Standards Acts, etc., are summarized in separate articles following this.

Prohibition of overtime during slack season, permission to work overtime during the busy season only when all the workers of the factory are fully employed, and division of available work during slack periods among all the employees properly engaged in the work are features of an agreement between Certain Fur Manufacturing Firms in Montreal, P.Q., and the International Fur and Leather Workers' Union, summarized below.

Manufacturing

Tobacco and Liquors

WALKERVILLE, ONT.—HIRAM WALKER AND SONS LIMITED AND THE DISTILLERY, RECTIFYING AND WINE WORKERS' INTERNATIONAL UNION OF AMERICA, LOCAL 61.

Agreement to be in effect from July 1, 1950, to June 30, 1952, and thereafter from year to year, subject to 60 days' notice, provided, however, that the question of wage rates may be reopened on July 1, 1951, by either party on 45 days' notice.

Union security: the employer will retain in his employ only members of the union in good standing. New employees must within 3 days of commencing work apply to the union for a temporary working permit. If retained by the company after a 90-day trial period they shall be required to join the union. The union agrees to issue temporary working permits to all temporary employees and accept them into the union as full members at the conclusion of their trial period upon payment of all fees and regular dues.

Check-off: upon written authorization by the employees the company agrees to deduct monthly from their pay union dues and to remit same to the union. The authorization shall not be revocable by the employee during the term of the agreement.

Hours: 8 per day 5 days a week, a 40-hour week. *Overtime:* time and one-half for all work in excess of 8 hours in any one day or 40 hours in any one week (44 hours in the Grain Corporation Elevator) and for all work on Sundays, except in the production departments, power house and watch service (if it is possible to eliminate Sunday work in the production departments any work performed on Sunday will be considered as overtime); double time for work on 8 specified *paid holidays.*

Vacations with pay: one week after 1 year's service, 2 weeks after 3 years' service and 3 weeks after 15 years' service.

An employee shall be entitled to 3 days' leave of absence with pay (provided they are regularly scheduled working days) to attend the funeral of a member of his immediate family.

Hourly wage rates for certain classes: milling department—elevator man $1.36, miller $1.41, general help $1.31; distilling department— still operators, drier operators, cooker operators $1.41; bottling department —male, checkers and starters $1.36, general help $1.31; female, government stamps $1.05, general help 96 cents; shipping department—checkers $1.39, general help $1.31; power house department—maintenance engineer $1.54; shift engineer, coal crane tender $1.49; water tenders $1.39, firemen $1.34; maintenance department—electricians, plumber and pipe fitter, coppersmith $1.54; machinists, blacksmiths, carpenters, bricklayers $1.49; pipe insulator, cement finisher $1.44; storekeeper $1.36; cooper shop—head cooper $1.49; coopers and header machine operators $1.44; barrel char operator $1.36; general help $1.31. An employee shall be entitled to the maximum rate of pay provided for his classification after 6 months' service with the company and not less than one month in the classification. The above rates are 5 cents per hour higher than the previous rates.

Shift differential: employees on rotating shift work shall receive a night shift premium of 5 cents per hour for all hours worked on the 2 shifts between 4 p.m. and 8 a.m.

Retirement: in consideration of the employer's contributions to the Retirement Annuity Plan, the union recognizes the right of the employer to require the retirement of any employee reaching the retirement age of 65 years or at any time thereafter, but such recognition shall continue only so long as the company shall not exercise its recognized right to withdraw the privilege of employees in the union's bargaining units to participate therein.

The Social Security Plan is covered by a separate agreement between the two parties.

Provision is made for *seniority rights* and *grievance procedure.*

Fur and Leather

MONTREAL, P.Q.—CERTAIN FUR MANUFACTURING FIRMS AND THE INTERNATIONAL FUR AND LEATHER WORKERS' UNION OF THE UNITED STATES AND CANADA, LOCALS 66 AND 67, AND THE JOINT BOARD OF THE INTERNATIONAL FUR WORKERS' UNION OF MONTREAL.

Agreement to be in effect from May 1, 1950, to April 30, 1952. Ninety days prior to its termination the parties will make every effort to negotiate an agreement for the future needs of the industry as the occasion may then require.

Union security: all employees must, as a condition of employment, be members of the union in good standing. Any new help that the employers require will be obtained from the union; if the latter is unable to supply same within 2 days from the time of the request, the employers may otherwise engage such new help, but any new employee must be a union member in good standing.

Check-off: the employers undertake to deduct monthly from the wages of all employees, covered by this agreement, union dues and assessments in accordance with a scale to be provided by the union and to transmit same to the union.

Hours: for manufacturers—8 per day Monday through Friday; for retailers—7 per day Monday through Friday, 5 on Saturday, except during the months of September, October, November and December, when they will be permitted to work 8 hours per day Monday through Friday; a 40-hour week in either case. *Overtime:* time and one-half will be paid for all work after 5 p.m. and for all work performed by wholesalers on Saturdays and by retailers after 1 p.m. on Saturdays; during the months of September, October, November and December, retailers will be allowed to work 4 hours on Saturday morning for which employees are to be paid single time; double time and one-half for work on 7 specified *paid holidays.* No work shall be permitted on Labour Day. No overtime work shall be performed during the first 6 months of the year except in the case of trimmers who will be permitted to work overtime from June 1, instead of from July 1. During the other months no overtime shall be permitted unless all the workers of the factory are fully employed. Overtime work in any given establishment shall not exceed 20 weeks and shall never extend beyond 9 p.m. Whenever there is not sufficient work for all employees, the available work in the shop shall be divided equally among all the employees properly engaged in the work. No worker shall be permitted to work in any craft other than the craft for which he has been engaged; if there is not sufficient work to keep him occupied at his craft he shall fill in other work as required of him; such other work, however, must not displace another employee.

Vacations with pay: after 6 months' continuous service one week, after 3 years' continuous service 2 weeks.

Minimum weekly wage rates effective September 1, 1950 (where 2 rates are given they are for first class and second class, respectively); cutters $65.50 and $55.50, apprentice cutters $43; operators, male $54.50 and $43, female $42 and $33.50; trimmers $43 and $36.50, blockers $43 and $32.50; finishers, male $49 and $41, female $40 and $32.50; lining cutters (or those who cut and sew) $36.50, lining operators $31.50, examiners $47 and $37; employees trimming or padding collars $32.50; all closers shall receive the wages of a first class operator; apprentices (male or female) first 6 months $15, second 6 months $17, third 6 months $19, fourth 6 months $21. A workman promoted from second class to first class will receive an increase of 25 per cent of the difference in wages between the 2 classes on the date of promotion and a further increase of 25 per cent of such difference each 6 months until he receives the minimum wage of a first class employee. Apprentices may be promoted to regular second class work subject to similar arrangements.

Apprentices: factories with less than 15 employees shall be entitled to engage one male apprentice and factories with more than 15 employees two male apprentices. As many female apprentices as are required may be employed but they must be of the ages of 16 to 20 years inclusive.

Insurance: the employers agree to pay weekly an amount equal to 1½ per cent of their weekly payroll to the insurance fund established for the benefit of all their employees.

Provision is made for *grievance procedure.*

Metal Products

KINGSTON, ONT.—ALUMINUM COMPANY OF CANADA, LIMITED, AND UNITED STEELWORKERS OF AMERICA, ALUMINUM DIVISION, LOCAL 343.

Agreement to be in effect from June 22, 1950, to June 21, 1951, and thereafter from year to year, subject to 60 days' notice. The company recognizes the union as the sole collective bargaining agent for all employees represented by the union. Neither party will discriminate against any employee by reason of race, colour, creed, nationality, religious or political beliefs, or because of membership or non-membership in the union.

Check-off: the company shall deduct monthly from the pay of all employees who so authorize union dues and remit same to the union; the authorization may be revoked within the 2 weeks' period preceding the date of expiration of this agreement or any renewal thereof (previously it could be revoked at any time).

Hours: the standard work week shall normally be the hours scheduled for the employee on that particular shift. No employee is obliged to work more than 6 days in any calendar week. Shifts shall rotate in a forward direction. *Overtime:* time and one-half shall be paid for all hours worked in excess of 8 per day providing a full standard week has been worked. Owing to the system of change-over and the variation in the number of shifts worked per week, the length of the standard week varies according to the shift on which an employee works. Ten minute *rest periods* shall be allowed in each half of shift except where shift workers are allowed a 30-minute lunch period with pay, in which case the rest period is to be considered as part of the lunch period.

Statutory holidays: 8 specified holidays shall be observed, 6 of which are *paid*

holidays. An employee required to work on a paid holiday shall be allowed a day off with pay in lieu thereof.

Vacations with pay: 1 week after 1 year's continuous service, 2 weeks after 5 years' service, always providing that at least 1,800 hours (exclusive of overtime) have been worked since employee last qualified for a vacation.

Hourly wage rates for certain classes: Remelt—fireman $1.10 to $1.27½, senior clerk $1.02½ to $1.15; fireman's helper, furnace operator, scalper operator (Ingersoll) $1 to $1.12½; saw operator, equipment conditioner, crane operator, truck operator 97½ cents to $1.06; mould conditioner, baler operator, ingot conditioner 95 cents to $1.03½; scalper helper, saw helper, machine helper 95 to 98½ cents; janitor, general labour 95 cents. Sheet mill—roller "A" $1.10 to $1.32½, roller "B" $1.05 to $1.27½, utility operator $1.07½ to $1.20, slitter operator $1.02½ to $1.15; shear operator, furnace operator $1 to $1.12½; stretcher operator 97½ cents to $1.06; ingot washman, punch press operator, roll catcher 95 cents to $1.01; circle shear operator 95 to 98½ cents. Tubing and extrusion—press operator "A" $1.10 to $1.27½, "B" $1.05 to $1.17½; angle truer operator, drawbench operator, finisher "A" $1.05 to $1.17½; stretcher operator $1.02½ to $1.15; tube reducer operator, point forger, finisher "B" $1 to $1.12½; die man, reeler operator, billet borer operator, swager operator, die assembler, lathe operator 97½ cents to $1.06, draw drum operator, degreaser operator, drawbench toolman, mandrel cleaner 95 cents to $1.03½; tube tester operator 95 cents to $1.01. Inspection—inspector "A" $1.02½ to $1.15, "B" 97½ cents to $1.06; female examiner 90 to 95 cents. Shipping—senior clerk, box maker, packer "A" $1.02½ to $1.15; packer "B", nailing machine operator 97½ cents to $1.06; load checker 95 cents to $1.03½. The above rates are from 5 to 8½ cents higher than the previous rates. Special rates will be established for jobs filled by handicapped persons. Any woman who completely replaces a man on his job will receive the man's rate for that job.

Shift differential: employees on the second and third shifts shall be paid a premium of 5 cents per hour over the regular rate.

Provision is made for *seniority rights, grievance procedure* and the continuation of the *Labour-Management Production Committee.*

KINGSTON, ONT.—ALUMINUM COMPANY OF CANADA, LIMITED, AND INTERNATIONAL ASSOCIATION OF MACHINISTS, LOCAL 54.

Agreement to be in effect from June 22, 1950, to June 21, 1951, and thereafter from year to year, subject to 60 days' notice. This agreement is similar to the one between this company and the United Steelworkers of America, Local 343, summarized above, except that it does not provide for any *rest periods.*

Hourly wage rates: Die and machine shops —craftsman "A" $1.32½ to $1.50; toolmaker, die maker, die sinker, head precision inspector $1.27½ to $1.50; machinist "A", roll grinder $1.20 to $1.42½; precision inspector, machinist $1.17½ to $1.35; heat treater $1.15 to $1.32½; senior clerk, improver "A" $1.02½ to $1.15; improver "B", laboratory helper 95 cents to $1.03½; cribkeeper 95 cents to $1.01, general labour 95 cents. Maintenance department—machinist "A", mechanic "A", electrician $1.20 to $1.42½; machinist, pyrometrist "A", $1.17½ to $1.35; painter, blacksmith, plumber, welder, saw filer, carpenter $1.15 to $1.32½; mechanic "B" $1.12½ to $1.30; substation operator, chief oiler $1.05 to $1.17½; pyrometrist "B", safety improver, saw grinder "A" $1.02½ to $1.15; oiler, chauffeur 97½ cents to $1.06; saw grinder "B", helper, driller 95 cents to $1.03½. Heating section (bi-weekly)—engineers, 2nd class $110 to $130, 3rd class $95 to $105, 4th class $85 to $90. With a few exceptions the above rates represent an increase from 5 to 7½ cents per hour.

WINDSOR, ONT.—CHRYSLER CORPORATION OF CANADA LIMITED AND THE INTERNATIONAL UNION, UNITED AUTOMOBILE, AIRCRAFT AND AGRICULTURAL IMPLEMENT WORKERS OF AMERICA, LOCAL 195.

Agreement to be in effect from June 5, 1950, to June 4, 1952, and thereafter from year to year, subject to notice. The union shall be entitled to re-open this agreement after June 4, 1951, on economic matters only excepting with respect to pensions and insurance of a general character. The company recognizes the union as the sole collective bargaining agent for all eligible employees. There shall be no discrimination, intimidation, restraint or coercion because of membership or non-membership in the union.

Check-off: the parties agree to a compulsory check-off of all sums assessed from time to time by the union upon its members for general union purposes from the pay of all employees covered by the agreement, subject to certain provisions (modified Rand Formula).

Hours: 8 per day 5 days a week, a 40-hour week. *Overtime:* time and one-half for work in excess of above hours and for work on Sundays (except when part of regular shift); double time and one-half for work on 6 specified *paid holidays* (previous agreement provided for double time on 6 paid holidays).

Vacations with pay: the two parties will discuss whether the vacation period for a year shall be 1 or 2 weeks. Employees shall be granted 1 week's pay after 1 year's seniority, 1½ weeks' pay after 3 years' seniority and 2 weeks' pay after 5 years' seniority.

Wages: the company agrees to a wage increase of 6 cents per hour, provided that for the period of 5 years from June 4, 1950, no demand will be made by the union upon the company for the establishment of a pension retirement plan or for the assumption by the company of any portion of the cost of any such plan.*

Shift differential: the company will pay a 5 per cent premium for work by employees regularly employed on the second or third shift.

Welfare plans: effective not later than June 15, 1950, the company agrees to pay the present cost of the following items: (1) *life insurance* up to $3,000 with permanent total disability clause shall be continued in the same manner as before; (2) *sickness and accident insurance* up to $21 weekly benefit with a maximum benefit period of 26 weeks; (3) *Blue Cross Hospital-*

* See footnote on next page.

ization Plan on a semi-private basis for employees only; (4) *Windsor Medical Services Plan* for employees only.

Provision is made for *grievance procedure* and *seniority rights.*

CHATHAM, ONT.—CHRYSLER CORPORATION OF CANADA LIMITED AND THE INTERNATIONAL UNION, UNITED AUTOMOBILE, AIRCRAFT AND AGRICULTURAL IMPLEMENT WORKERS OF AMERICA, LOCAL 127.

Agreement to be in effect from June 22, 1950, to June 22, 1952, and thereafter from year to year, subject to notice. This agreement is similar to the one between the company's Windsor plant and the union (Local 195), summarized above, with the following differences:—

Hours of work are 42 per week, 8 or 8½ per day.

Wages are increased by 11 cents per hour, effective June 18, 1950, as compared to 6 cents in the other agreement.*

Non-metallic Minerals and Chemicals

CHIPPAWA, ONT.—NORTON COMPANY AND INTERNATIONAL CHEMICAL WORKERS' UNION, LOCAL 154.

Agreement to be in effect from May 21, 1950, to May 21, 1951, and thereafter from year to year, subject to 60 days' notice.

Union security: any employee who at the date of this agreement is, or who during the life of this agreement becomes, a member of the union shall, as a condition of employment, maintain his membership in good standing. All new employees shall, after 45 days' employment by the company, make application to the union and remain union members in good standing for the life of this agreement.

Check-off: the company agrees to deduct union dues monthly from the wages of all employees who were members of the union as of May 20, 1946, and, if so authorized, an initiation fee, not to exceed $3, from the pay of employees who became members after May 20, 1946.

Hours: for day shift workers—42 per week; the daily hours will be agreed upon between the company and the union committee. For shift workers—8 hours per day with a working week averaging 42 hours according to the agreed shift schedule. *Overtime:* time and one-half shall be paid for work beyond the regularly assigned working hours and double time for work on 8 specified *paid holidays.* An employee required to work 2 hours or more overtime after his normal quitting time shall be furnished a meal or $1 cash. For each 4 hours overtime, after the initial 2 hours, an additional meal or $1 cash will be given. Paid time to eat the meal furnished or to obtain food with the cash will be allowed.

Vacations with pay: after 1 year's continuous service 1 week, after 3 years' service (must include one year's continuous service) 2 weeks, after 20 years' service 3 weeks. One day leave of absence with pay will be granted an employee to attend the funeral of an immediate relative.

Wages: the minimum hiring rate for hourly-rated employees shall be $1.18 per hour, except in the case of apprentices, janitors, guards and watchmen; this represents an increase of 7 cents per hour over the previous rates. When replacing male employees with female employees the principle of equal pay for equal work shall prevail.

Shift-differential: 5 cents per hour extra will be paid for work on afternoon shift and 7 cents per hour extra for work on night shift.

Pension: the contributory pension plan and an improved supplementary plan will continue in effect for the term of this agreement.

Sickness and Accident Insurance: the present group insurance plans will be changed as follows in so far as they affect active employees as of June 1, 1950: (*a*) life insurance policies for $1,000 will be increased to $1,500 and total and permanent disability benefits will be added to the policies of all active employees; (*b*) the daily hospital benefit will be increased from $5 to $5.50 and special hospital services benefits from $50 to $55.

Provision is made for *seniority rights* and *grievance procedure.*

Construction

TORONTO, ONT.—TORONTO PLASTERING CONTRACTORS' ASSOCIATION AND OPERATIVE PLASTERERS AND CEMENT FINISHERS INTERNATIONAL ASSOCIATION, LOCAL 48.

Agreement to be in effect from May 1, 1950, to April 30, 1952; should either party desire to change or terminate this agreement notice to that effect shall be given on or before December 31, 1951.

Union security: the employers agree to employ only union members; the union shall give preference in supplying men to employers who are party to this agreement. The production of a working membership card or a signed permit from the union shall be accepted as a guarantee of membership; the union, however, reserves the right to withhold the granting of any permit when less than 50 per cent of its entire membership are employed. Where a firm or company comprise more than 2 members, only 2 of such number shall be recognized as employers working with the tools at the trade.

Hours: 8 per day 5 days a week, a 40-hour week. *Overtime:* time and one-half for work after the regular working hours up to 10 p.m., double time thereafter and for work on Saturdays, Sundays and all statutory holidays; work on such days shall be done only in cases of emergency and on receipt of permit from the union to do so. Under no circumstances shall members of the union work on Labour Day.

Vacations with pay rates shall be 4 per cent of weekly earnings.

Minimum hourly wage rate for plastering of any description shall be $2. When 8 or more plasterers are employed there shall be a superannuated man employed at a rate to be agreed upon between the employer and the employee, but in any event not less than 60 per cent of the regular wage rate.

Provision is made for transportation to and from *out-of-town jobs* and for *settling disputes.*

* Newspaper reports indicate that, effective September 10, employees were granted additional wage increases amounting to 8 cents an hour for production workers and 11 cents for skilled trades (L.G. Nov., 1950, p. 1787).

TORONTO, ONT.—THE CONTRACTING PLASTERERS' ASSOCIATION OF TORONTO AND THE PLASTERERS LABOURERS' UNION, LOCAL 781.

Agreement to be in effect from September 25, 1950, to April 30, 1952, and thereafter from year to year, subject to notice.

Union security: the employers agree to employ only members of the union; the union must give preference in supplying men to employers party to this agreement. If the union is unable to supply men, the contractor shall have the right to employ emergency men who must first obtain permits from the union and then join the union.

Check-off: employers will accept orders for union and initiation dues when signed by the members affected.

Hours: 8 per day Monday through Friday, a 40-hour week. *Overtime:* time and one-half for work in excess of the regular hours; straight time for work on Saturday morning and time and one-half on Saturday afternoon when not attending plasterers and lathers; double time on Saturdays and Sundays if working with plasterers or lathers.

Vacation pay shall be paid at the rate of 4 per cent of total weekly earnings.

Minimum hourly wage rate for plasterers' and lathers' labourers $1.35, retroactive to May 1, 1950, and effective to April 30, 1951 (an increase of 5 cents over previous rates); from May 1, 1951, to April 30, 1952, the rate shall be $1.40.

Provision is made for the *settling of disputes.*

KITCHENER AND WATERLOO, ONT.—CERTAIN CONTRACTORS AND UNITED BROTHERHOOD OF CARPENTERS AND JOINERS OF AMERICA, LOCAL 1940.

Agreement to be in effect from May 15, 1950, to April 30, 1951, and thereafter from year to year, subject to 90 days' notice.

Union security: the employers agree to employ as carpenters only members of the union so long as the union is able to furnish them.

Hours: 9 per day Monday through Friday, a 45-hour week. When more than one shift is required the second and third shifts shall be given 9 hours' pay for 8 hours' work. No workman shall be allowed to work more than one shift in 24 hours except at overtime rates. *Overtime:* time and one-half for work in excess of the regular working hours, double time for work on Sundays and 7 specified holidays.

Vacation pay will be at the rate of 4 per cent of earnings.

Minimum hourly wage rate—$1.25, an increase of 5 cents over the previous rates.

Apprentices shall be governed by the Ontario Apprenticeship Act.

Provision is made for *grievance procedure.*

LONDON, ONT.—NATIONAL ASSOCIATION OF MASTER PLUMBERS AND HEATING CONTRACTORS OF CANADA (ONTARIO BRANCH) LONDON AND THE UNITED ASSOCIATION OF JOURNEYMEN AND APPRENTICES OF THE PLUMBING AND PIPEFITTING INDUSTRY OF THE UNITED STATES AND CANADA, LOCAL 593.

Agreement to be in effect from May 1, 1950, to May 31, 1951, and thereafter from year to year, subject to 60 days' notice.

Union security: employers shall give preference in employment to union members or men willing and eligible to become members. Union members likewise agree to give preference to shops which are parties to this agreement.

Hours: 8 per day Monday to Friday, a 40-hour week. If shift work becomes necessary, a shift commencing at 8 a.m. shall work the regular 8 hours for 8 hours' pay; a shift commencing any time between 9 a.m. and 7 p.m. shall work 7 hours for 8 hours' pay; a shift commencing any time between 8 p.m. and 2 a.m. shall work 6 hours for 8 hours' pay; no employee shall work more than one shift in any 24-hour period under these conditions. *Overtime:* double time shall be paid for all overtime and for work on Saturdays, Sundays and 8 specified holidays.

Hourly wage rates: for journeymen $1.65, an increase of 10 cents over previous rates; for apprentices: 1st year 30 per cent of journeyman's rate, 2nd year 40 per cent, 3rd year 50 per cent, 4th year 70 per cent and 5th year 85 per cent. On completion of their full term of apprenticeship with one employer all plumbing apprentices will be provided with a complete kit of tools as his own personal property. *Vacations* with pay rates shall be 4 per cent of wages, the same to be additional to above hourly rates. Vacation period shall be mutually agreed upon between employer and employee.

Out-of-town work: employees required on out-of-town work shall have their fare and board paid and time spent travelling to and from such work shall be paid for at single time, but only up to 5 p.m.; if travelling at night a sleeper is to be provided. Employees shall be provided with transportation to and from their home city as follows: one trip per month on jobs 200 miles distant and one trip every 2 months on jobs over 200 miles from home.

Provision is made for the *adjustment of disputes and grievances.*

Service

Professional

TORONTO, ONT.—THE GOVERNORS OF THE UNIVERSITY OF TORONTO AND BUILDING SERVICE EMPLOYEES' INTERNATIONAL UNION, LOCAL 204.

Agreement entered into June 15, 1950. The employer recognizes the union as the exclusive collective bargaining agent for all eligible employees. There will be no discrimination, interference, restraint, coercion or intimidation by the employer or the union because of membership or non-membership in the union.

Check-off: the employer agrees to deduct monthly from the pay of all employees, who so authorize, union dues and remit same to the union; the authorization may be cancelled at any time.

Hours: 48 per week. *Overtime:* time and one-half for all work in excess of 48 hours per week except in the case of caretakers and trades helpers whose existing overtime arrangements will be continued; double time for work on 8 specified holidays.

Vacations with pay: full time employees will be granted one week after 1 year's continuous service, 2 weeks after 2 years' continuous service; sessional employees will be given a vacation pay allowance on the

following basis: up to 24 months' service 2 per cent and after 24 months' service 4 per cent of their total sessional earnings.

Sick leave: employees with 6 months' continuous service shall be granted 7 days sick leave with pay and employees with 12 months or more 14 days. Commencing June 1, 1950, the unused portion of sick leave with pay in any one year may accumulate up to a maximum of 2 months.

Hourly wage rates, retroactive to March 11, 1950: female cleaners, day 69 cents, shift 74 cents; male cleaners, day 88 cents, shift 93 cents; groundsmen, guards, watchmen, firemen and trimmers 90 cents; truck drivers 94 cents, trades helpers $1.14; caretakers and maids—existing rates to be increased not less than $183 per annum and $10 per month, respectively. A premium of 15 cents per hour will be paid to groundsmen while employed on cement finishing or plaster or brick repair work.

Provision is made for *seniority rights* and *grievance procedure.*

Collective Agreement Act, Quebec

Recent proceedings under the Collective Agreement Act, Quebec,* include the extension of one new agreement and the amendment of six others. In addition to those summarized below, they include: the amendment of the agreements for barbers at Montreal and for the fine glove industry in the province published in the *Quebec Official Gazette* issue of October 28.

A request for the amendment of the agreement for retail stores at Farnham was published in the issue of October 21; another request for the amendment of the agreement for the building trades at Montreal was gazetted October 28. Requests for the amendment of the agreements for the building trades at Montreal, for the men's and boys' hat and cap industry in the province and for barbers and hairdressers at St. Hyacinthe were gazetted November 4. Requests for the amendment of the agreements for the mechanical construction and repair industry, and for hospitals and charitable institutions at Quebec, and for the sheet metal fabricating industry at Montreal were gazetted November 11, and requests for the amendment of the agreements for retail stores at Farnham and barbers and hairdressers at Three Rivers in the issue of November 18.

Orders in Council were also published amending the constitution and by-laws of certain joint committees and others approving the levy of assessments on the parties.

Manufacturing

Vegetable Foods

BAKERS AND BAKERY SALESMEN, QUEBEC.

An Order in Council, dated October 19, and gazetted October 28, makes obligatory the terms of a new agreement between "L'Association des Patrons-Boulangers de Québec et District, Inc." and "Le Syndicat de l'Industrie de la Boulangerie, Pâtisserie et Biscuiterie Inc.", Québec. Agreement to be in effect from October 28, 1950, to October 27, 1951, and thereafter from year to year, subject to notice. It applies to all employees working in bakeries, pastry-shops or biscuit-shops turning out products for commercial purposes, as well as salesmen, salesmen's helpers and delivery men.

Territorial jurisdiction comprises the city of Quebec, the City of Lévis, and within a radius of 35 miles from their limits.

Hours: 54 hours per week (work to be performed every day except Sunday); journeymen, helpers and apprentices (bakers) of the night shift will work a 50-hour week. (Previously employees worked 57 hours per week.)

Overtime is payable at the rate of time and one-half for all work performed in excess of the standard hours per week and for work on Sundays and specified holidays. When certain specified holidays occur during a work week the standard work week will be reduced by 9 hours.

Minimum weekly wage rates in bread bakeries: in establishments with more than 6 employees—head journeyman-baker or assistant foreman $41 per week; in establishments with 6 employees or less—head journeyman-baker or assistant foreman $38. Rates for other classifications: doughmaker, leaven man $36, oven man $35, weigher, panner and journeyman-baker $34, helpers $28, apprentices from $18 in the first year to $24 during the third year. Occasional journeyman bakers will be paid $6 for a standard work day. (In the previous agreement a journeyman-baker in any bakery was paid $28.50 per week.)

Minimum weekly wage rates in pastry and biscuit-shops: in establishments with more than 6 employees—head journeyman pastry-cook, departmental head or assistant foreman $41; in establishments with 6 employees or less—head journeyman pastry-cook, departmental head or assistant foreman $38; male and female employees producing cakes or pastries of all kinds—20 per cent are to

* In Quebec, the Collective Agreement Act provides that where a collective agreement has been entered into by an organization of employees and one or more employers or associations of employers either side may apply to the Provincial Minister of Labour to have the terms of the agreement which concern wages, hours of labour, apprenticeship, and certain other conditions made binding throughout the province or within a certain district on all employers and employees in the trade or industry covered by an agreement. Notice of such application is published and 30 days are allowed for the filing of objections, after which an Order in Council may be passed granting the application, with or without changes as considered advisable by the Minister. The Order in Council may be amended or revoked in the same manner. Each agreement is administered and enforced by a joint committee of the parties. References to the summary of this Act and to amendments to it are given in the LABOUR GAZETTE, January, 1949, page 65. Proceedings under this Act and earlier legislation have been noted in the LABOUR GAZETTE monthly since June, 1934.

be paid a minimum of $27 per week, 40 per cent a minimum of $22 and the remaining 40 per cent a minimum of $16. (In the previous agreement 40 per cent were paid a minimum of $23, an additional 40 per cent a minimum of $17.50 and the remaining 20 per cent a minimum of $12.50 per week.) Minimum wage rates for those male and female employees engaged in packing, wrapping, orders and sampling, and all other employees including those employed in either wholesale or retail stores pertaining to this industry, 20 per cent are to be paid a minimum of $18 per week, 40 per cent a minimum of $16, and the remaining 40 per cent a minimum of $14. (The previous agreement provided for rates ranging from $12.50 in the first 6 months, $13.50 in the second 6 months and $15 thereafter.)

Minimum weekly wage rates in the delivery department and for maintenance employees: salesmen $22, salesmen's helpers $16, delivery men $22. (The above rates represent increases ranging from $3 to $6 higher than those formerly in effect.) Maintenance men (watchmen, yardmen, stable men, general workers, etc.) $25, helpers $16 per week are added classifications.

Vacation: one week wtih pay after one year of continuous service with the same employer; one-half day with pay for every month to those with less than one year's service. Employees are entitled to 30 days of absence for illness or other justifiable reasons without loss of vacation rights. (Vacation provisions are similar to those previously in effect.)

General provisions governing apprenticeship regulations and board and lodging are included in this agreement.

Construction

Building Trades, St. Jérôme.

An Order in Council, dated October 26, and gazetted November 4, amends the previous Orders in Council for this industry (L.G., Aug., 1948, p. 873; Dec., 1949, p. 1559; May, 1950, p. 694, Oct., p. 1680, Nov., p. 1905).

Overtime for job watchmen (night and day) will be paid at the rate of 75 cents per hour for all work performed in excess of the weekly maximum of 72 hours.

Building Trades, Hull.

An Order in Council, dated November 8, and gazetted November 18, extends the term of the previous Orders in Council for this industry (L.G., Jan., 1950, p. 78, April, p. 517, Nov., p. 1905) to March 12, 1951.

Building Trades, St. Hyacinthe.

An Order in Council, dated November 8, and gazetted November 18, amends the previous Orders in Council for this industry (L.G., July, 1947, p. 1002, Sept., p. 1308; May, 1948, p. 488; Oct., 1949, p. 1247; Feb., 1950, p. 209, Aug., p. 1185, Oct., p. 1679, Dec., p. 2067, and previous issues).

Minimum hourly wage rates: certain classifications have been revised and their rates are as follows: layer of imitation stone and brick or of similar cement products (on the job) $1.15 in zone I, 95 cents in zone II, natural or artificial stone cutter (on the job) $1.15 in zone 1, 90 cents in zone II. (The rates shown above are from 5 to 10 cents per hour higher than those formerly in effect for the classifications artificial stone layer and stone cutter, on the job.) Stucco layer $1.15 in zone I, 95 cents in zone II and helpers to the above trades 75 cents in zone I, 65 cents in zone II are new classifications which have been added to the schedule of minimum rates for this industry.

Trade

Retail Stores, Quebec.

An Order in Council, dated October 26, and gazetted October 28, amends the previous Orders in Council for this industry (L.G., May, 1946, p. 629, June, p. 783, July, p. 930; June, 1949, p. 736 and previous issues).

Minimum weekly and hourly wage rates: departmental manager—(male) $55, (female) $43 if annual turnover is $100,000; (male) $50, (female) $37 if annual turnover exceeds $50,000; (male) $45, (female) $32 if annual turnover is less than $50,000; head displayer $55; floor-walker $44; accountant $45, assistant-accountant (male) $32, (female) $25; collector (outside) $33; regular clerks and office employees (male) from $15 during the first year to $29 in the fifth year, after 5 years from $34 to $43 per week; (female) from $14 in the first year to $19.50 in the third year, after 3 years from $22 to $26 per week; supernumerary employees (male) 48 cents per hour, (female) 31 cents per hour, extra employees (male) 58 cents, (female) 38 cents per hour; displayers (male)—after 5 years from $39 to $49 per week; delivery men $37, delivery men's helpers (under 21 years of age) from $15 in the first year to $29 in the fifth year, delivery men's helpers (21 years and over) $31; messenger $14, errand boy $12; shop personnel—tailors and dress-makers (male) after 5 years of experience from $32 to $40; milliners-seamstress (female) after 3 years of experience from $22 to $27; apprentice tailors or dress-makers (male) from $15 during the first year to $27 during the fifth year, apprentice milliners—seamstress (female) from $14 in the first year to $19.50 in the third year; tradesmen $41, trades apprentices from $15 in the first year to $24.50 in the fourth year, trades apprentices who have not qualified as journeymen after the fourth year will be paid the rate of a general work employee; rates for apprentice clockmakers or jewellery trades from $10 per week in the first 6 months to $22 in the fourth year remain unchanged; general work employee (under 21 years of age) from $15 during the first year to $29 in the fifth year, (21 years of age and over) $31, general employees working outside regular hours will be paid 70 cents per hour; charwomen (working 48 hours per week, day or night) $20, charwomen (working less than 35 hours per week) 45 cents per hour; elevator operator (45 hours per week) $16 per week; restaurant employees—(female) from $16.50 to $20.75; (male) from $19.25 to $28.75 per week. (The rates shown above represent increases where not otherwise stated, ranging from $1 to $5 per week over those formerly in effect.) The rates for night watchmen (watch only) which were increased from $25 to $27 per week and those rates for watchmen (doing general work) which were increased from $30 to $32.50, March 26, 1949, are further increased from $27 to $30 and from $32.50 to $36.50 respectively.

Industrial Standards Acts, Etc.

Schedule of Wages and Hours Recently Approved by Provincial Orders in Council in Ontario and Alberta.

Recent proceedings under the Industrial Standards Acts, etc. include two schedules made binding for the first time, two new schedules, and the amendment of one other, all summarized below.

ONTARIO

Construction

CARPENTERS, BELLEVILLE.

An Order in Council, dated October 5, and gazetted October 21, makes binding the terms of a new schedule for carpenters at Belleville, to be in effect from October 31, 1950, during pleasure.

Hours: 8 per day, Monday through Friday, a 40-hour week. (A reduction of 4 hours per week from those formerly in effect.) Work that cannot be performed during regular daily working hours may be done at night if an employee does not work in excess of 8 hours, this work to be known as *night work.*

Overtime is payable at time and one-half unless the advisory committee issues a special permit authorizing the performance of the work at a lower rate. Double time on Saturdays, Sundays and 9 specified holidays. (Previously on Saturday overtime was payable at the rate of time and one-half after 12 noon.) One hour of overtime work may be done immediately following the working period of a regular work-day without permission of the advisory committee.

Minimum wage rate is increased from $1.25 to $1.40 per hour for work done during regular day periods and from $1.25 to $2.10 per hour for *night work.* The advisory committee may fix a lower minimum rate for handicapped workers.

ELECTRICAL WORKERS, BELLEVILLE.

An Order in Council, dated October 5, and gazetted October 21, makes binding the terms of a first schedule for electrical construction and repair workers at Belleville, to be in effect from October 31, 1950, during pleasure.

Hours: 8 per day, 4 on Saturday, a 44-hour week. Where work is carried on in 2 or more shifts, an employee will be deemed to be employed during a regular working-day where the employee does not work more than 8 hours in any 24-hour period. Only one shift will be known as a day-shift.

Overtime: time and one-half for work done during the one-half hour period immediately following the working period of a regular working day; double time for all other overtime work. No overtime work shall be performed without a permit from the advisory committee (with the exception of the one-half hour period shown above). Except in cases of extreme necessity where life or property is in danger or where repairs on buildings must be done in order to prevent loss of employment to those persons regularly employed therein, no permit will be issued for work to be done on Saturday after 12 noon, or on Sundays and 6 specified holidays.

Minimum hourly wage rate: $1.25 per hour during regular working periods. Employees on *night shift* will be entitled to 8 hours' pay for 7 hours' work. The advisory committee may fix a lower minimum rate for those employees who are handicapped.

PLUMBERS, OTTAWA.

An Order in Council, dated October 12, and gazetted October 28, makes binding the terms of a new schedule for the plumbing and heating industry at Ottawa, to be in effect from November 7, 1950, during pleasure.

Hours remain unchanged at 8 per day, 40 per week.

Overtime: time and one-half for work from 5 p.m. to 12 midnight, Monday to Friday inclusive and from 8 a.m. to 12 noon Saturday; double time for all other overtime and for work on Sundays and 8 specified holidays except that one hour's overtime at regular rates may be added to any regular working day to complete a repair job. (Overtime provisions are similar to those formerly in effect.)

Minimum hourly wage rates are increased from $1.25 (L.G., Oct., 1947, p. 1476) to $1.70 per hour. Men working on *night shifts* will be paid 8 hours' pay for 7 hours' work. The advisory committee may fix a lower minimum wage rate for those employees who are handicapped.

ALBERTA

Manufacturing

Metal Products

GARAGES AND SERVICE STATIONS, EDMONTON.

An Order in Council, dated September 11, and gazetted September 30, amends the previous Order in Council for this industry (L.G., Dec., 1946, p. 1779).

---

* In six provinces—Nova Scotia, New Brunswick, Ontario, Manitoba, Saskatchewan and Alberta—legislation provides that, following a petition from representatives of employers and employees in any (or specified) industries, the provincial Minister charged with the administration of the Act may himself, or through a government official delegated by him, call a conference of representatives of employers and employees. This conference is for the purpose of investigating and considering the conditions of labour in the industry and of negotiating minimum rates of wages and maximum hours of work. A schedule of wages and hours of labour drawn up at such a conference, if the Minister considers that it has been agreed to by a proper and sufficient representation of employers and employees, may on his recommendation be made binding by Order in Council in all the zones designated by the Minister. The Minister may also establish an advisory committee for every zone to which a schedule applies to assist in carrying out the provision of the Act and the regulations. References to the summaries of these Acts and to amendments to them are given in the LABOUR GAZETTE, April, 1950, page 518.

75226—5

Hours remain unchanged at 8½ per day, 46½ per week; the regular shift for gas pump attendants and/or front end men shall be 8½ hours distributed between 7 a.m. and 7 p.m., except on one day each week when the regular shift will be 4 hours; in garages and service stations permitted to give 24-hour service the regular working shifts will be 8½ hours, except on one day a week when the hours shall not exceed 4, and may be worked at any time during the 24-hour period. One day in lieu of regular shift work on Sundays and/or statutory holidays to be given within ensuing 7 days.

Overtime rate remains unchanged at time and one-half. However, front end men, floor service men, night watchmen, storage attendants and/or gas service men working on their regular shifts on Sundays and/or statutory holidays will receive a day in lieu thereof within the ensuing 7 days. If employer is unable to grant a day in lieu thereof within 7 days he may, subject to permission from the advisory committee and approval by Board of Industrial Relations, pay the employee concerned at the rate of time and one-half for the hours so worked or on duty.

Minimum hourly wage rates for mechanics are increased from $1 to $1.25 for class AA, from 95 cents to $1.15 for class A1, from 90 cents to $1.05 for class A and from 85 cents to $1 per hour for class B. Rates for washmen and greasemen 65 cents per hour remain unchanged. As previously in effect non-mechanical employees, permitted to do washing and/or greasing, provided such work does not take more than one-half their total time, are to receive not less than the minimum wage established by an Order pursuant to the male Minimum Wage Act.

Construction

Carpenters, Medicine Hat.

An Order in Council, dated October 16, and gazetted October 31, makes binding the terms of a first schedule for carpenters at Medicine Hat, to be in effect from November 10, 1950, for a period of 12 months, or thereafter, during pleasure.

Hours: 8 per day, Monday through Friday, 40 hours per week. *Night shift* will consist of 7 hours worked between 5 p.m. and 8 a.m. *Extra shifts* in a 24-hour period shall not exceed 8 hours and the starting time of such shifts must be between 8 a.m. and 4 p.m. Extra shifts will only be worked when same will continue for at least 3 consecutive nights and must be run in addition to the regular day shift.

Overtime: time and one-half for the first 4 hours worked in excess of regular hours; double time for all other hours worked and for work done on Sundays and 9 specified holidays. No work on Labour Day except where safety to life or property makes it necessary. Overtime rates will apply to *extra shifts* where not worked for 3 consecutive nights.

Minimum hourly wage rates: journeymen carpenters $1.40, carpenters (in charge of work) 10 cents per hour over journeymen's rate. Employees called to work shall receive a minimum of 2 hours' pay. *Night shift* employees to receive 8 hours' pay for 7 hours' work.

Apprentices will be governed in accordance with The Alberta Government Apprenticeship Act and Regulations.

FAIR WAGES CONDITIONS IN DOMINION GOVERNMENT CONTRACTS

The Fair Wages Policy of the Dominion Government has the purpose of ensuring that all government contracts contain provisions to secure the payment of wages generally accepted as current in each trade for competent workmen in the district where the work is carried out.

There are two sets of conditions applicable to government contracts, those which apply to building and construction work, and those which apply to contracts for the manufacture of various classes of government supplies and equipment.

The practice of the different departments of the Government, before entering into contracts in the first group, is to obtain from the Department of Labour schedules setting forth the current wage rates for the different classifications of workmen required in the execution of the work. These schedules, known as fair wages schedules, are thereupon included by the department concerned in the terms of the contract.

Fair wages schedules are not issued in respect of contracts for supplies and equipment. Contracts in this group are awarded in accordance with a policy which provides that wage rates must equal those current in the district.

A more detailed account of the Dominion Government's Fair Wages Policy is given in the LABOUR GAZETTE for July, 1946, p. 932.

Schedules Prepared and Contracts Awarded During October

(1) ***Works of Construction, Remodelling, Repair or Demolition.***

During the month of October the Department of Labour prepared 137 fair wages schedules for inclusion in building and construction contracts proposed to be undertaken by various departments of the Government of Canada in different parts of the Dominion.

During the same period a total of 167 construction contracts was awarded by the various Government departments. Particulars of these contracts appear in the accompanying table.

Copies of the relevant wages schedules are available to trade unions or other *bona fide* interested parties, on request.

The labour conditions of each of the contracts listed under this heading, besides stipulating working hours of not more than eight per day and forty-four per week, provide that "where, by provincial legislation, or by agreement or current practice, the working hours of any class of workers are less than forty-four per week, such lesser hours shall not be exceeded on this work except in cases of emergency as may be approved by the Minister of Labour and then only subject to the payment of overtime rates as specified by the Minister of Labour", and also specify that the rates of wages set out therein are *"minimum* rates only" and that "nothing herein contained shall be considered as exempting contractors and subcontractors from the payment of higher rates in any instance where, during the continuance of the work such higher rates are fixed by provincial legislation, by agreements between employers and employees in the district or by changes in prevailing rates".

(2) ***Contracts for the Manufacture of Supplies and Equipment.***

Contracts for supplies and equipment were awarded as follows, under the policy that wage rates must equal those current in the district:—

Department	No. of contracts	Aggregate amount
Canadian Commercial Corporation. . . .	10,069	$16,465,723.73
Post Office.	18	82,103.66
Public Works. . . .	1	3,573.00
RCMP.	9	337,045.00

75226—5½

* The labour conditions of these contracts contain the General Fair Wages Clause providing for the observance of current or fair and reasonable rates of wages and hours of labour not in excess of 8 per day and 44 per week, and also empower the Minister of Labour to deal with any question which may arise with regard thereto.

Recent Regulations Under Dominion and Provincial Legislation

Certain federal legislation conferring benefits on veterans of World War II has been declared to apply to veterans of the Special Force. With respect to unemployment insurance, a veteran who has served in the Special Force will, on discharge, be credited with contributions at the combined weekly rate of 96 cents for the period served, with a maximum of five years' contributions. ¶In Newfoundland, the first regulations issued under the Boiler and Pressure Vessel Act, 1949, provide, among other matters, for the qualification and examination of boiler inspectors, operating engineers, firemen and welders. For the inspection and construction of boilers and pressure vessels, Canadian Standards Association regulations are adopted as law in Newfoundland, as in several other provinces. ¶In British Columbia, supplementary Orders allowing extra hours to be worked in shops during the Christmas season have again been issued, and in Saskatchewan, an exemption has been permitted under the One Day's Rest in Seven Act.

DOMINION

Canadian Forces Act

Under the Canadian Forces Act (L.G., Nov., 1950, p. 1919) the Governor in Council is authorized, by regulation, to declare that certain laws listed in a schedule which confer benefits upon veterans of the Second World War will apply to veterans of any special force established in consequence of action undertaken by Canada under the United Nations Charter, the North Atlantic Treaty or any other similar instrument.

Accordingly, the Special Force Veterans Benefit Regulations were issued under an Order in Council (P.C. 5412) on November 8, and gazetted on November 22, making the Reinstatement in Civil Employment Act, the Pension Act, sections of the Civil Service Superannuation Act, and Part IV of the Unemployment Insurance Act applicable to persons enrolled in the Royal Canadian Navy Special Force, the Canadian Army Special Force and the Royal Canadian Air Force Special Force.

The Reinstatement in Civil Employment Act had already been made applicable to the Special Force by an earlier Order in Council (P.C. 4619 of September 25, 1950), now rescinded (L.G., 1950, p. 1920), and this Order has merely been incorporated in the new regulations.

The Pension Act, which provides for pensions in respect of members of the Canadian naval, military and air forces, will apply to persons enrolled for the purpose of serving in the Special Force, while serving in the Canadian Army under the terms of such special enrolment, and to every officer and man of the regular or reserve forces while on the strength of the Special Force in a theatre of actual operations as though such service were military service rendered during World War II within the meaning of the Act.

However, the section of the Pension Act prescribing the rates of pensions paid for death or disability suffered in respect of military service rendered in the non-permanent active militia or in the reserve army during World War II and in respect of military service in peacetime does not apply to members of the Special Force.

Two subsections of the Civil Service Superannuation Act apply to persons serving in the Special Force and to officers and men of the reserve forces as though their service in the Special Force were service in the forces during World War II. The period during which a contributor was absent on leave from the Civil Service in active or full-time service in the forces may be counted as service of the contributor for the purpose of computing allowance or gratuities under the Civil Service Superannuation Act. Further, if a contributor

to whom this section applies was discharged from the forces and, immediately following his discharge, underwent treatment in a hospital operated under authority of the Minister of Veterans Affairs, the period of treatment will be counted as active service in the forces.

Part IV of the Unemployment Insurance Act, which authorizes the payment of unemployment insurance to veterans, applies to every person who was enrolled for the purpose of serving in the Special Force and who was discharged from service in the Canadian Army under the terms of the special enrolment. It also applies to every officer and man in the reserve forces who has served in the Special Force and whose service with the regular forces has been terminated within one year from the date on which he ceased to serve with the Special Force. Termination, whether by way of return to reserve status or otherwise, will be deemed to be a discharge. Also covered are members of the regular forces who have served on the Special Force and who have been discharged from the regular forces on medical grounds while on the strength of the Special Force.

"Period of service" is defined as length of service in the Canadian Army under the terms of the special enrolment, except in the case of the last two categories of veterans mentioned, where it means the period of service on the strength of the Special Force in a theatre of actual operations, excluding any absence without leave, leave of absence without pay, time served while undergoing sentence of penal servitude, imprisonment or detention, or period of service in respect of which pay is forfeited.

With regard to contributions, the regulations stipulate that, on discharge of the veteran, the fund will be credited, from money appropriated by Parliament for the purpose, with the amount of the combined contributions of the employer and employed person at the combined weekly rate of 96 cents for a period equal to the period of service up to a maximum of five years. The veteran will be deemed to have been employed in insurable employment during his period of service and all contributions required under the Act will be deemed to have been paid. However, if his period of service in the Special Force exceeds three months, but the combined contributions plus any contribution made with respect to him prior to his period of service do not entitle him to benefit for at least 90 days, there will be credited to the fund for this purpose sufficient contributions to provide 90 days' benefit for the veteran on his discharge.

The section of Part IV of the Act requiring a qualification period of 15 weeks in insurable employment and the section which brings merchant seamen under this Part do not apply to the Special Force.

Prevailing Rate Employees

The general regulations for prevailing rate employees (L.G., 1950, p. 224) were amended by P.C. 4245, which was made on September 7 and gazetted on September 27, with regard to vacation leave granted when a worker's employment is terminated otherwise than by dismissal for cause or voluntary resignation after he has completed six months of service. A distinction is now made between employees engaged on short-term projects of 12 months or less and those who are engaged for a longer period.

In the case of an employee engaged on a short-term project, the termination of employment will not take effect until the end of a period of vacation leave, after he has ceased to work, equal to the total unexpired vacation leave credits accrued to him on the day he ceased to work.

The termination of employment of a worker not engaged on a short-term project will take effect at the end of a period of vacation leave, after he has stopped work, equal to the total unexpired vacation leave credits accrued to him on the day he ceases to work and of the additional unexpired credits that would have accrued to him if he had continued to be employed until the end of the fiscal year.

PROVINCIAL

British Columbia Factories Act

Further safety measures have been taken in British Columbia by the addition of three lengthy sections to the regulations which were made in 1935 under the Factories Act governing the installation, operation and maintenance of freight and passenger elevators. The amendments, which were approved on August 28 and gazetted October 19, contain rules for the construction and safe operation of moving stairways and power dumb-waiters. They require the installation of guards and safety devices, and provide for strict tests either in the manufacturer's plant or on installation.

Moving Stairways

Rules for the construction of moving stairways are set out under the headings: angle of inclination, width, balustrading and handrails, treads and landings, strength of trusses or girders, track arrangement,

capacity and loading, and factors of safety.

Safety requirements for the operation of moving stairways include limitation of speed, application of power, lighting, safety devices and tests. Steps must not travel at more than 125 feet per minute unless the administrative authority approves a higher speed. An electric motor must not be used as a driving means for more than one moving stairway and the drive machine must be connected to the main drive-shaft by toothed gearing or a coupling and not by a chain. The use of cast iron pinions is prohibited.

Permanent artificial lighting must be provided in every machine room and persons must be able to operate the lighting switch without reaching over any part of the machinery. Step-treads must be illuminated throughout their entire run at a light intensity of not less than two-foot candles.

A number of safety devices must be provided including emergency stop-buttons, conspicuously located in a readily accessible position near the top and bottom landing of each moving stairway and guarded against accidental contact. The operation of either button must interrupt the power to the drive machine and it must be impossible to start the drive machine by means of these buttons. Starting buttons must be of the key-operated type and be located within sight of the stairway. There must be a speed governor to interrupt the power to the drive machine in case the speed of the steps exceeds a predetermined value not exceeding by more than 40 per cent the normal running speed.

Every moving stairway must be supplied with an electrically released and mechanically operated brake of sufficient power to stop it when fully loaded. In case any of the safety devices function, the brake must automatically stop the moving stairway when it is operating in a descending direction. If the drive-machine is connected to the main drive shaft by a chain, a device must be provided to brake the main drive-shaft in case the drive-chain parts.

Each type and size of moving stairway is required to be type-tested for the contract load which it is designed to carry. Tests may be made at the option of the manufacturer in his plant or on the first moving stairway of that type and size installed in a building. Installations made after the type tests have been completed must be tested separately without load. Tests required by the regulations include a speed test, the application of the broken step-chain and the broken drive-chain devices and the emergency stop buttons.

Reasonable access to the interior of the moving stairway must be provided for inspection and maintenance.

Power Dumb-waiters

The hoistways of power dumb-waiters must be enclosed from floor to ceiling except that at the top terminal landing under-counter hoistways need only be enclosed to the top of the hoistway. Landing openings in power dumb-waiter enclosures must be equipped with doors provided with electric contacts and locks which will prevent the operation of the machine while the hoistway door is open and prevent the opening of the door unless the car is at the landing.

Power dumb-waiter cars must be of sound construction, as defined in the regulations, and capable of sustaining loads as set out in a table. They must not exceed 9 square feet in horizontal area and the compartment height must not be over 3 feet, 6 inches. A metal plate bearing the name of the manufacturer and the contract load must be placed in a conspicuous place in the dumb-waiter car. Other construction requirements govern guides, counterweights and suspension means.

Dumb-waiters must be equipped with brakes which are automatically applied when the power is cut off the motor. If the dumb-waiter is operated by a winding-drum machine, it must be provided with a slack-cable device to cut off the power and stop the machine if the car is obstructed in its descent. An automatic device must be provided to stop the car at each terminal within the limits of overtravel.

A test must be made of every new dumb-waiter with rated load in the car, and the brake and all other safety devices must be made to function.

British Columbia Hospital Insurance Act

A regulation issued under the Hospital Insurance Act by Order in Council on October 31, gazetted November 9, makes it clear that the provision in the general regulations regarding payment of a prorated premium by persons formerly exempt from payment who desire to come under the Act will apply also to their dependants (L.G., 1950, p. 1065).

The section in question relates to persons who are declared exempt from the Act because they are Christian Scientists or because they reside in an area where provision of general hospital services is not practical, and permits them to qualify as beneficiaries by the payment of a prorated tax calculated from the first day of the month following the date on which they renounce their exemption status.

British Columbia Minimum Wage Acts and Hours of Work Act

The annual permission of the Board of Industrial Relations for overtime in the mercantile industry during the Christmas season has been granted by Orders issued on November 14, and gazetted on November 16.

Under the Hours of Work Order, male and female shop workers in Vancouver and district, Victoria, Esquimalt, Oak Bay, Saanich and New Westminster may work two hours in excess of the daily limit of eight set by the Hours of Work Act on both December 22 and December 23, and shop workers elsewhere in the Province may work two hours overtime on December 22. For the extra hours permitted the Order issued under the Minimum Wage Acts requires time and one-half the regular rate to be paid.

Temporary workers taken on between December 4 and December 31, inclusive, must be paid at the same rates fixed by Minimum Wage Order 24 (L.G., 1950, p. 86) for permanent full-time and part-time shop workers. They must receive at least $18 a week for a work-week of 39 hours or more and 47 cents an hour if they are employed for less than 39 hours a week. The daily guarantee provision of Order 24 is waived during this period.

Newfoundland Boiler and Pressure Vessel Act

The first regulations issued under the Boiler and Pressure Vessel Act, 1949, which went into force July 18, 1950 (L.G., 1950, p. 881), were made on September 12 and gazetted September 26. They are divided into five parts covering the construction and inspection of boilers and pressure vessels; welding of boilers, pressure vessels and pressure piping and welders' qualification tests; mechanical refrigeration; qualifications and examination of boiler inspectors, operating engineers and firemen; and inspection fees and fees payable for examinations and certificates.

Construction and Inspection

Part I provides that the Canadian Regulations for the Construction and Inspection of Boilers and Pressure Vessels (second edition), prepared by the Canadian Standards Association are adopted as regulations under the Newfoundland Act. The CSA regulations also apply in Nova Scotia, Ontario, Manitoba, and Saskatchewan.

Welding

Part II applies to all welding done in connection with the construction, alteration or repair of boilers, pressure vessels and pressure piping which are subject to inspection under the Boiler and Pressure Vessel Act, 1949. Provisions regarding responsibility of manufacturers, employers and welders, welders' qualification tests and inspection are similar to those made in Saskatchewan earlier in 1950 (L.G., 1950, p. 701).

A manufacturer, contractor, welding shop operator or other person who employs welders is responsible for the quality of welding done. Before any welding is commenced, he must, at the request of the Chief Inspector, conduct approved welding procedure tests in accordance with the requirements of the codes of the American Society of Mechanical Engineers and the American Standards Association and submit proof of these tests to the Chief Inspector for recording or registration. He must arrange with the Chief Inspector for a welder's qualification test or obtain approval for an equivalent test and have it witnessed by an inspector or other authorized person, and in work done on new construction, he must ascertain that the design of the vessel has been approved and registered by the Department.

Applications for a welder's test are subject to the approval of the Chief Inspector, who prescribes the tests in accordance with requirements set out in Appendix I of the regulations. Appendix I, which is clearly illustrated by diagrams, sets out the procedure to be followed in testing the welder's skill in either the gas or electric process. If a welder fails a test, he may undergo further tests, either immediately or after he has had additional training or experience. A welder's qualification test will be effective for 12 months, or longer if approved by the Chief Inspector, but a retest may be required at any time if a welder is suspected of losing his proficiency.

The permission of an inspector is required before a welded repair is made on any boiler or pressure vessel, and except with an inspector's permission, only the electric arc process may be used. The welding of high pressure piping must be done by a registered welder and be in accordance with the requirement of the Code for Pressure Piping of the American Standards Association.

An inspector may inspect or re-inspect any welding job and may subject it to any tests which he considers necessary. On his recommendation, the Chief Inspector may refuse to issue a certificate authorizing the operation of a boiler, pressure vessel or pressure piping, or may cancel an inspection certificate if welding has been

done improperly or if the welder was not qualified or registered.

Detailed rules for welding, with diagrams, are set out governing the repairing of cracks, building up of corroded surfaces, seal welding, re-ending and piecing of tubes, patches that may be applied to stayed and unstayed sheets, and to tube sheets of fire-tube boilers and the repair of tube-holes. These rules are very similar to the regulations enacted in 1949 under the Nova Scotia Steam Boiler and Pressure Vessel Act.

Mechanical Refrigeration

Part III of the regulations provides that the Mechanical Refrigeration Code, 1939, of the Canadian Standards Association is adopted as regulations under the Act.

Qualifications of Boiler Inspectors, Engineers and Firemen

Part IV prescribes the qualifications to be possessed by boiler inspectors and the certificate of competency to be held by the Chief Inspector and by the other inspectors responsible to him. It also provides for the certification, by examination, of firemen and of four classes of operating engineers. In order to obtain the certificate in each class, an applicant must fulfil the requirements set out in the regulations as to age and experience; hold the next lower certificate; satisfy the Chief Inspector as to his character and ability; and obtain at least the required percentage in the examination. The regulations also set out the scope of the work and duties which a person within each class may perform.

The Chief Boiler Inspector must hold a Newfoundland First Class Operating Engineer's certificate, be experienced as a mechanical or steam engineer, and have a knowledge of the CSA Standards, the ASME Boiler Construction Code and the ASA Code for the design, construction, maintenance, repair and inspection of boilers, pressure vessels and plants. He must be able to set examination papers for all grades of operating engineers' and firemen's certificates and conduct examinations, and he must be experienced in correspondence and office routine.

The other inspectors must hold at least a Newfoundland Second Class Operating Engineer's certificate and be able to set examination papers for the various grades of certificates from Second Class Operating Engineer to Fireman. In other respects, they must have the same qualifications as the Chief Inspector.

The regulations provide for certificates for firemen and for four classes of engineers, and are similar to those in effect in Ontario. Every candidate for examination must fill in the required form, stating his mechanical and electrical training and experience and pay the prescribed fee. Examinations must be written, except that when the Chief Inspector or other inspector deems it necessary an oral examination may be given and the applicant may be required to demonstrate his knowledge of a steam or refrigeration plant. A certificate is issued to every candidate who obtains at least 60 per cent of the possible marks in the appropriate examination, except in the case of a candidate for a First Class Engineer's certificate who must obtain at least 70 per cent of the possible marks. A full statement, for each class, of the subject-matter in which a candidate may be examined forms part of the regulations. Rules for the conduct of examinations are also set out.

In listing the qualifications required for Operating Engineers' and Firemen's certificates, the regulations are similar to those in effect in Ontario.

A candidate for a First Class Operating Engineer's certificate must hold a Second Class certificate of any Canadian province and have at least eight years practical operating experience in a high pressure steam plant on a regular shift, at least six years of which must have been as chief engineer or shift engineer. He must have spent at least four years as engineer in a steam plant of not less than 350 h.p. and one year as engineer in a plant of over 600 h.p. with at least three years in the boiler room and one year in the engine or refrigeration compressor room.

A period not exceeding three years may be deducted from actual operating experience, at the discretion of the Chief Inspector, in the case of a skilled mechanic trained in building steam engines or boilers or in boiler inspection, or in the case of a candidate who has completed a course in engineering in a recognized university. A First Class engineer may operate, as chief engineer, steam plants and refrigeration plants of unlimited horsepower and he may perform the duties of any operating engineer.

A candidate for a Second Class certificate must hold a Third Class certificate and have at least five years operating experience in a high pressure steam plant, three years of which must have been in the boiler room of a plant of over 200 h.p. The holder of a Second Class certificate may operate, as chief engineer, a high pressure steam or refrigeration plant not exceeding 750 h.p. or act as shift engineer under the direction of a certificated chief engineer in a plant of unlimited horse-

power. He may also take charge of any low pressure steam plant or compressor plant of unlimited horsepower.

For a Third Class certificate, a candidate must be 21, hold a Fourth Class certificate and have two years practical operating experience in a high pressure steam plant of 75 h.p. or over, at least 12 months of which must have been actual firing experience in the boiler room.

A Third Class engineer may operate, as chief engineer, a high pressure steam plant or refrigeration plant not exceeding 350 h.p. and he may act as shift engineer under the direction of a chief engineer in any plant. He may operate a low pressure steam plant not exceeding 600 h.p. or a compressor plant of not more than 350 h.p. and act as shift engineer in a low pressure steam plant of any capacity.

A Fourth Class certificate may be granted to a candidate who is 19, and who has had one year's operating experience firing on a regular shift in a high pressure steam plant or firing on a regular shift in a low pressure steam plant of over 100 h.p.

A Fourth Class engineer may operate, as chief engineer, a stationary high pressure plant or refrigeration plant where the h.p. does not exceed 200, a low pressure steam plant of not more than 360 h.p., a compressor plant of not more than 200 h.p., and any hoisting plant, portable plant, portable air compressor plant or traction plant. He may also act as shift engineer under a chief engineer in a high pressure plant not exceeding 350 h.p. or in a low pressure plant of not more than 600 h.p.

A Fireman's certificate may be granted to a candidate who is 18 and has had one year's experience firing in a boiler plant. He may operate a low pressure steam plant of not more than 100 h.p. and he may tend boilers, engines or refrigerating machinery in a high pressure steam plant not exceeding 350 h.p. during the brief absence of the engineer in charge from the boiler or engine room but not from the plant. He may also take charge of a shift under the direction of the engineer in charge in a low pressure steam plant of not more than 350 h.p.

The regulations provide for the granting of a Newfoundland certificate of equivalent grade at the discretion of the Chief Inspector, without examination, on payment of the prescribed fee, to a person who holds a certificate of current issue of any other province or to a person who possesses a marine engineer's certificate issued under the Canada Shipping Act for ocean-going steamships, British Board of Trade or under the provisions of the Act "Of the Qualifications of Engineers" which is now repealed. (Chapter 217 of the Consolidated Statutes of Newfoundland 1916.)

Persons employed in plants immediately preceding the coming into force of these regulations will be granted, without examination, and on payment of the prescribed fee for the renewal of a certificate, a grade of certificate which will allow them to continue in the positions they hold. First Class engineers' certificates, however, will only be issued on examination.

If a person holds a certificate issued without examination and changes his position to one requiring a certificate of a higher grade, he may apply for and obtain a certificate by examination before assuming his new duties.

Other provisions of the regulations include conditions regarding renewal and cancellation of certificates, and rules for the rating of plants in horsepower. Small plants below a specified minimum horsepower are exempted from the regulations.

Fees

Part V sets out the fees payable for each boiler, pressure vessel and plant inspected during construction, or extensive repairs, for second-hand boilers and pressure vessels when sold or exchanged, for annual inspections, for surveying designs, for registration of welding procedures and qualification tests of welders, and for Operating Engineers' and Firemen's examinations and certificates.

Nova Scotia Trade Schools Regulation Act

An amendment has been made to the special regulations governing correspondence and home-study schools under the Act with regard to the discontinuing by a student of a home-study course. As before, a person who has entered into a contract with the operator of a trade school which supplies courses of instruction by correspondence within the Province may notify the operator in writing of his intention to cease taking the course, and the operator is required to refund a specified amount of the tuition fee. Now, however, the written notification must be made within 12 months after the date of the contract or within 12 months after the date of submission by him to the school of his last completed lesson, whichever date is later.

Quebec Pressure Vessels Act

A new section added to the general regulations under the above Act by an Order in Council (O.C. 1134) on October 12, gazetted on October 21, provides that the

travelling expenses of an inspector who travels outside of the Island of Montreal and Quebec City to inspect pressure vessels and their accessories, including piping, at the time of manufacture or installation must be paid by the owner, user or contractor.

Saskatchewan Boiler and Pressure Vessel Act

Effective from November 1. minor changes were made to the regulations governing the welding of boilers, pressure vessels and pressure piping under the above Act (L.G., 1950, p. 701) by an Order in Council (O.C. 1856/50) made on October 24 and gazetted November 4.

As previously, no welded repair may be made on any boiler having a working pressure of 15 pounds or less to the square inch except by a registered welder. However, a less severe qualification test may be required for this class of work, or all tests may be waived where only minor repairs are to be made. Previously, the regulations stated that the welder need not be qualified by test unless required by an inspector.

Three new subsections were added. One provides that, except for a working pressure of less than 50 pounds to the square inch or a working temperature of less than 250° F, all welds on piping larger than three-inch pipe must be made by the electric arc method, unless otherwise permitted by an inspector.

The second authorizes an inspector to condemn any apparatus welded contrary to the regulations or to order such welding removed. When such an order is issued, the person whom the inspector deems responsible must see that the order is immediately carried out.

A third new subsection requires a welder whose registration has been cancelled to surrender forthwith to the Department the symbol assigned to him at the time of registration.

Changes were also made in the section setting out fees for the registration of welding procedures and for welders' qualification tests. All or part of the fees for welders' qualification tests may now be waived at the discretion of the Chief Inspector.

Saskatchewan Health Services Act

Minor changes were made in the general regulations under the Health Services Act to bring them into line with a 1950 amendment to the Act which transferred its administration from the Health Services Planning Commission to the Minister of Public Health. The amending regulations (O.C. 1861/50) were gazetted on November 4 and were effective from November 1.

Saskatchewan One Day's Rest in Seven Act

For a period of one year dating from November 1, 1950, cooks and cookees employed by R. Smith and Company, Moose Jaw, Saskatchewan, are declared to be exempt from the provisions of the One Day's Rest in Seven Act by an Order in Council (O.C. 1946/50) of November 10, gazetted November 18.

This action was taken under authority of Section 7 of the Act which permits the Minister to grant such an exemption, for not more than a year, on the application of an employer against whom the enforcement of the Act would, in the Minister's opinion, work a hardship. This is the first such exemption to be made.

The Act requires a rest period of at least 24 consecutive hours in every seven days (on Sunday when possible) to be granted to all workers covered by the Act except those not usually employed for more than five hours a day (L.G., 1950, p. 888).

Legal Decisions Affecting Labour

On appeal to the Privy Council, the Supreme Court of Canada opinion that the prohibition of the sale and manufacture of margarine is not within the authority of Parliament was upheld. Two Ontario cases dealt with the authority of municipal councils under the Factory, Shop and Office Building Act to require service stations and shops to remain closed during specified hours.

Parliament's authority to legislate concerning trade and commerce was held by the Judicial Committee of the Privy Council not to provide jurisdiction for Section 5 (a) of the Dairy Industry Act.

The Judicial Committee of the Privy Council on October 16, 1950, in a judgment delivered by Lord Morton of Henryton, upheld the majority decision of the Supreme Court of Canada that the prohibi-

tion of the manufacture and sale of margarine was *ultra vires* of Parliament. The appeal from the Supreme Court decision was taken to the Privy Council by the Canadian Federation of Agriculture. The legislation in question was Section 5 (*a*) of the Dairy Industry Act:—

5. No person shall

(*a*) manufacture, import into Canada or offer, sell or have in his possession for sale any oleomargarine, margarine, butterine, or other substitute for butter, manufactured wholly or in part from any fat other than that of milk or cream.

The prohibition of *importation* of margarine by the Act was held by the Supreme Court of Canada to be valid legislation.

Counsel supporting the appeal contended that the prohibition of the manufacture and sale of margarine was within the powers of Parliament under the BNA Act because:—

(1) It is legislation in relation to the regulation of trade and commerce under Section 91 (2).

(2) It is legislation relating to the criminal law under Section 91 (27).

(3) It is a law for the peace, order and good government of Canada and is within the "residuary power" of Parliament as stated in the opening sentence of Section 91.

(4) It is a law "in relation to agriculture in all or any of the provinces" (Section 95).

The judgment deals with each of these contentions in turn and finds none of them valid. In respect to the first contention, the judgment refers to a previous line of decisions dealing with the conflict between the power of Parliament to regulate trade and commerce and the provinces' exclusive right to legislate concerning the civil rights of their citizens. The present case was said to be typical of many in which it has been considered necessary to put a limit on the power to regulate trade and commerce in order to preserve "the degree of autonomy which, as appears from the scheme of the Act as a whole, the Provinces were intended to possess".

The second contention, that the prohibition is legislation in relation to criminal law, was dismissed for the reason that it was held to be "in pith and substance a law for the protection and encouragement of the dairy industry in Canada". The fact that penalties are provided for a breach of the prohibition was held not to bring it under the head of criminal law.

The answer to the third argument, that the prohibition comes within the "peace, order and good government" clause, was that the prohibition relates to civil rights and that the facts presented to their Lordships did not lead to the conclusion "that there exist in the present case the conditions which may override the normal distribution of powers in Sections 91 and 92".

Finally, their Lordships held that it was not law in relation to agriculture. They recognized that the object of the prohibition was to protect and encourage the dairy industry in Canada, but held that there is a distinction between legislation *in relation to* agriculture and legislation which may produce a favourable effect on the strength and stability of that industry. They found the connection between the prohibition and the operations carried on by farmers too indirect to bring the prohibition within the terms of Section 95.—Privy Council Appeal No. 30 of 1949, *In the matter of a reference as to the validity of the Dairy Industry Act, Revised Statutes of Canada, 1927, Chapter 45.*

In a decision of the Ontario Court of Appeal, the municipal by-law restricting the hours during which Toronto gasoline service stations may remain open was found to be valid.

The by-law of the City of Toronto which provides that all gasoline service stations should be closed during specified hours was held to be valid by the Ontario Court of Appeal on October 26, 1950. This decision reversed the judgment of the Ontario High Court of Justice given by Mr. Justice Schroeder on June 23, 1950 in an appeal by way of a stated case from a Toronto magistrate.

Two charges were brought before the magistrate against an oil company in Toronto for keeping open on Sunday. The magistrate found that the necessary facts had been established, but dismissed the charges on the ground that the by-law was invalid.

Under the by-law, which was passed under authority of Section 82 of the Ontario Factory, Shop and Office Building Act, the Chief Constable was authorized, upon the recommendation of an Advisory Committee, to issue permits to allow certain gasoline service stations to remain open during the prohibited hours. The magistrate found that the by-law was invalid in that it delegated the exercise of discretionary powers to the Chief Constable, which was not within the powers of the city council.

In the High Court of Justice it was argued that a provision of the Act which says that a by-law applicable to service stations may provide for the issuing of permits, by implication gave municipal

councils authority to delegate the powers conferred upon them. Mr. Justice Schroeder held that, while the Provincial Legislature possesses authority to confide to a municipal institution authority to make by-laws, "to authorize a further delegation of such discretionary power to another subordinate agency by the municipality would require very clear and unequivocal language in the enactment which is said to confer such authority". He did not believe that such power and authority could be inferred from the words "provide for the issuing of permits".

Mr. Justice Schroeder next dealt with the question whether the fact that the section conferring authority on the Chief Constable was found to be *ultra vires* invalidated the whole by-law. His conclusion was that the section was not "clearly severable from the other portions of the by-law" and that the whole of the by-law was therefore *ultra vires* and the magistrate was right in dismissing both charges made under it.

Mr. Justice Laidlaw of the Court of Appeal, in giving the reasons for decision, held that the sections providing for permits fell within the municipality's power as contained within Section 82a (*c*) of the Act and were in accordance with the intention of that enactment. He did not think that the Legislature intended that every application for a permit to remain open should be the subject of consideration and action by the council itself. The council had made regulations and imposed restrictions in respect of the issue of permits, and it had not divested itself of power to amend the by-law. He found the by-law valid, and reversed the previous decision, imposing a penalty of $50 and costs for each offence. *Rex ex rel. Fletcher v. Joy Oil Co. Limited and Rex ex rel. Press v. Joy Oil Co. Limited.* [1950] OWN, p. 593 and p. 745.

The Ontario High Court of Justice held that a St. Thomas magistrate was right in dismissing a charge under the municipal early closing by-law on the ground that the required number of occupiers had not signed the application for the by-law.

The early-closing by-law for grocery shops in St. Thomas was ruled invalid on June 1, 1950 by Mr. Justice Ferguson of the Ontario High Court of Justice. The court action was brought against the operators of a grocery store which had remained open on a Wednesday afternoon. The by-law passed under the Factory, Shop and Office Building Act, November 30, 1949, came into effect on December 14, 1949. It required all grocery shops within the limits of the municipality to close and remain closed from 12.30 noon on Wednesday of each week until 5 a.m. of the next day, with certain exceptions.

The Court found that the application for the by-law had not been signed by three-quarters or more of the occupiers of grocery shops within the municipality as required by the Factory, Shop and Office Building Act. On this ground, the by-law was declared invalid. In addition, the defendant raised a second ground for dismissal of the action, to the effect that even if the by-law were valid, he did not come under it because the principal trade in the shop was not that of a grocery business but that of a lunch counter or restaurant. The Court found that this was a fact whether one looked at the volume of business or the number of sales. The defendant was entitled to succeed on both grounds. Mr. Justice Ferguson, therefore, dismissed the action with costs. *Smith v. Galloway and Galloway.* [1950] OWN, p. 576.

State Labour Legislation in the United States in 1949 and 1950

The major action of State Legislatures in the two years 1949 and 1950 was to increase benefits under workmen's compensation and unemployment insurance laws. Further progress was made in comparatively new fields of legislation to prevent discrimination in employment and to provide compensation for disability not connected with employment.

The most extensive enactments in American State legislation during 1949 were in the field of workmen's compensation. Each of the 44 State Legislatures that met in regular session as well as Hawaii altered their workmen's compensation laws in one or more respects. Over half the States also liberalized the benefits and made other changes in their unemployment insurance laws.

During the legislative sessions that were convened in 1950 further amendments were

made to State workmen's compensation laws and in several States unemployment insurance benefits were increased. Of considerable importance during the present year was the major revision of child-labour legislation in Maryland.

A noticeable trend in labour legislation in 1949 was the progress being made with respect to disability compensation and in measures taken to ban discrimination in employment. During the year two States enacted disability compensation laws. Four passed fair employment practice Acts prohibiting discrimination in employment and Massachusetts extended the provisions of its earlier legislation.

In general, 1949 saw more changes and developments in the field of State labour legislation than 1950. The latter year was mainly devoted to the consolidation, improvement and extension of existing laws.

Child Labour and School Attendance

New child labour laws were passed in Maine, Tennessee and Alaska in 1949. Under all these laws a minimum age of 16 was established for most types of employment. This standard is now in force in 22 States, Alaska and Puerto Rico. All these Acts provided for maximum hours of work standards where employment of young persons is permitted. Tennessee and Alaska both established an 8-hour day, 40-hour week, 6-day week for minors under 18 while Maine established an 8-hour day, 48-hour week, 6-day week for minors under 16. In Alaska a night work prohibition for minors under 16 was enacted for the first time.

Some States removed restrictions on child labour. In Maine the night work prohibition affecting minors under 16 was repealed and in Ohio the minimum age for working in bowling alleys outside of school hours was reduced from 16 to 14. In Indiana child labour legislation provided that whenever courses of secondary education required work experience as a part of these courses, girls of 16 and 17 years of age would be permitted to work until 9 p.m. in the evening in mercantile establishments, two evenings a week, under school-approved and school-supervised vocational educational programs. Previously, such students had been allowed to work till 7 p.m. only.

Four States, Idaho, Michigan, Oklahoma and Wisconsin made major changes in their compulsory school attendance provisions. Idaho lowered its upper age from 18 to 16 for required school attendance but strengthened the legislation by eliminating the exceptions by which children under 16 were previously excused from attendance at school. In Wisconsin, the exemptions under which children of 14 and 15 were excused from school attendance were repealed. The Michigan legislation which permitted children of 14 and 15 to enter employment because of family need was also repealed. The new Oklahoma law provided that minors under 18, unless they were high school graduates, had to be in attendance at school.

During 1950 a new child labour law was introduced in Maryland, while Kentucky, Rhode Island and Louisiana amended their existing legislation. The Maryland law replaced the existing 14-year minimum in specified occupations with a 16-year minimum for employment at any time in manufacturing, mechanical or processing occupations, and a 16-year minimum during school hours, and a 14-year minimum outside school hours, in other occupations. Any farm or domestic work when performed outside school hours or during vacations and/or in private homes is exempted from the entire Act. The minimum age under which employment certificates are required for minors was raised from 16 to 18 and such certificates were made compulsory for all occupations.

The 8-hour day, 48-hour week, 6-day week was changed to an 8-hour day, 40-hour week, 6-day week for minors under 16. In addition, work on school days is limited to three hours a day, and during weeks when school is in session at least five days, to 23 hours. The night work prohibition of 7 p.m. to 7 a.m. for minors under 16 has been strengthened by making it applicable to all occupations rather than certain specified occupations as had been the case formerly. The section of the Maryland child labour law that applied to minors engaged in street trades was also strengthened by making the legislation applicable to the entire State and not just to cities of over 20,000 population as formerly.

Three other States amended their child labour legislation in 1950. In Kentucky the standard was lowered somewhat when the minimum age for minors working in bowling alleys was reduced from 18 to 16. In Rhode Island during 1950, the prohibition forbidding night work between 11 p.m. and 6 a.m. for minors of 16 and 17 employed in factories and manufacturing or mechanical establishments was extended to business and mercantile establishments. Louisiana amended its child labour law in 1950 by forbidding the employment of minors between the ages of 14 and 18

engaged in the processing of sugar cane or sorghum to work more than 10 hours a day or 60 hours a week.

Hours of Work

Maximum hours standards for adult workers were raised in 1949 in Maine, Tennessee and Wyoming. In Maine the 9-hour day, 54-hour week for women over 16 was extended to include stores, hotels, restaurants and laundries. Female production workers in factories, workshops and mechanical establishments were limited to a 50-hour work week. Tennessee reduced its work week with respect to women in similar establishments from 57 to 50 hours. A Wyoming Act provided for two 15-minute rest periods daily for female employees in factories, stores, and restaurants.

New York relaxed its hours standards in one respect during 1950. Provision was made, that till April 1, 1951, women over 21 could be employed in mercantile establishments till 12 o'clock midnight rather than to 10 p.m. as had been the case.

South Carolina amended its hours of work legislation in 1950 by exempting from the prohibition against work on Sunday, manufacturing establishments in which chemical manufacturing processes are involved and in which continuous and uninterrupted operations are necessary. The legislation specifies, however, that this exemption does not apply to plants which manufacture, dye, print, finish or process cotton, woollen or worsted material. In establishments where Sunday work is thus permitted the Fair Labour Standards Act must be complied with for work in excess of 8 hours a day and 40 hours a week.

Wages and Hours

New Hampshire and Massachusetts enacted legislation setting statutory minimum wages during 1949. In the former State a minimum wage of 50 cents per hour for men, women and minors was established except for employees engaged in household or domestic labour, farm labour, summer camps for minors, restaurants, hotels or cabins, or as outside salesmen.

In Massachusetts the minimum-wage law was amended and a statutory wage of 65 cents per hour was established for men, women and children in occupations covered by the Act except in cases where the Minimum Wage Commission had approved or would approve the payment of a lower wage under wage-board procedure already established by the Act.

Laws under which women must be paid the same wages as men for comparable work were passed in California, Connecticut, Maine and Alaska during 1949. By the end of 1949 up to thirteen jurisdictions had equal pay legislation in effect.

Several States introduced changes in their hours and wages legislation in 1950. In connection with public contracts, Maryland established a "Commission on Prevailing Wages for the State of Maryland" with duties to determine the general prevailing rates within the State and fix the rates for public contracts. The legislation provides that 8 hours shall constitute a day's work and 40 hours a week's work for all labourers, workmen or mechanics who may be employed by a general contractor in the building industry, and their sub-contractors, in the execution of any State contract for the construction of buildings, roads or bridges. Such employees are permitted to work longer than 8 hours a day or 40 hours a week provided they are paid overtime rates for any work in excess of 40 hours a week.

In its 1950 legislative session New Jersey amended its minimum wage law by deleting the definitions of the terms "women" and "minor" and substituting the term "any person" for those terms. The amendment thus extends minimum wage law coverage to all workers.

Safety and Health

Several States enacted legislation designed to increase the safety of employees during 1949. In Oklahoma the duties of a factory inspector and the number of factories to be inspected were increased. In Michigan, the installation of first aid kits and ventilation conveniences was ordered inspected where considered necessary and in South Carolina emergency exits were made compulsory in textile mills.

Three States took measures to safeguard the health of workers. Vermont created a division of Industrial Hygiene with authority to study and investigate conditions causing occupational diseases and to recommend regulations for the control of such diseases. In West Virginia the Board of Health was empowered to make rules and regulations governing occupational and health hazards and to regulate sanitary conditions in workshops, factories and labour camps. The Industrial Commission of Wisconsin was authorized to require suitable lunch rooms in places of employment where such facilities were deemed necessary for the employees' welfare.

During its legislative session in 1950 Missouri made various changes in its mining law. The prohibition against the entry into any mine to work by females of any age or boys under 14 years of age, or boys under 16 unless they can read or write, was reenacted and codified.

A new Rhode Island law requires that factories, shops, or mechanical or mercantile establishments employing 25 or more persons must provide for the administration of first aid to any employee who is injured or who becomes ill on the premises.

A lowering of health standards is noted in the Missouri repeal of the provisions of the labour law which required employers to keep factories clean, well ventilated, free of injurious dust, and provided with a sufficient number of separate water closets for the use of each sex when three or more persons, or when any children, young people or women are employed therein.

Workmen's Compensation

Workmen's compensation legislation was improved in all States that were in session in 1949. Death and disability benefits were increased by raising the maximum weekly payment, extending the number of weeks of such payments, increasing the maximum percentage of wages for computing benefits and by increasing the aggregate maximum amount of benefits permitted. Benefits for both death and disability were increased in 25 States and in Hawaii while medical aid benefits were liberalized in 22 States and Hawaii.

Several State Legislatures meeting in 1950 amended their workmen's compensation laws to liberalize them in one or more respects. Kentucky increased its maximum weekly death benefits for wholly dependent persons from $20 to $23, and total death benefits for wholly and partially dependent persons from $8,000 to $9,000.

Massachusetts raised the maximum weekly benefits payable to the widow or widower of a deceased employee from $15 to $20 if there are no children, and benefits to dependent children were also increased.

Mississippi, Rhode Island, New Jersey and New York also liberalized their legislation by increasing certain benefits. Mississippi, Rhode Island, Georgia and New York extended the coverage of their Acts during the year. Public employees were brought within the scope of the Act by Mississippi, and members of volunteer fire companies by New York.

Unemployment Insurance

Throughout 1949 an increase in benefits was evident in the field of unemployment insurance while there was a parallel decline in employer's contributions. Nine States increased their weekly minimum benefits and 24 their weekly maximum benefits. In 13 States the maximum potential weeks of benefits were extended while 29 States increased the maximum potential benefits a claimant could draw in one year. Practically all these liberalizations of benefit amount were accompanied by increases in the amount of qualifying wages required for minimum benefits and for the higher weekly and annual amounts.

Though the trend in nine States was towards restricted rather than extended coverage, two States added coverage of governmental workers and two, coverage of maritime workers.

During legislative sessions of 1950 the same trend in increasing unemployment insurance benefits was evident. Georgia, Maine, Kentucky and New Jersey all increased certain benefits under their unemployment insurance laws. In Maine the weekly minimum benefit was increased from $6 to $7. Georgia raised its weekly benefit amounts from a range of $4 to $18 to a range of $5 to $20. The duration of benefits was extended from 16 to 20 weeks. The minimum qualifying wages for benefit were accordingly raised from $100 to $175.

The changes in the New Jersey legislation increased the maximum weekly benefit amount from $22 to $26 and the weekly minimum benefit from $9 to $10. This resulted in raising the maximum potential benefits from $572 to $676 and the required base-period wages from $1,713.01 to $2,025.01. Kentucky increased its weekly benefit amounts from a range of $7 to $20 to a range of $8 to $24 and extended the duration of such benefits from 22 to 24 weeks.

Disability Compensation

Legislation providing benefits for workers who are unemployed due to sickness or injury not connected with employment was enacted by New York and Washington during 1949. Legislation in the latter State was suspended pending the result of a referendum. The referendum was held November 7, 1950 and resulted in defeat. Similar measures are in effect in New Jersey, California and Rhode Island. During 1950 New Jersey amended its legislation to provide for increased benefits.

The New York law (L.G., 1949, p. 682) provides for benefits during disability to both employed and unemployed workers. For benefits payable for disability during employment, the employee is required to contribute one-half of one per cent of his

wages but not in excess of 30 cents per week. The employer is required to contribute the cost in excess of the employee's contribution. A special fund was created to provide benefits during unemployment under disability. From January 1, 1950, to June 30, 1950, the employee and employer were each assessed one-tenth of one per cent of the wages paid to the employee, but not in excess of six cents per week in order to create the special fund for the disabled unemployed. Subsequent to June 30, 1950, an annual assessment of insurance carriers and self-insured employers is made to provide adequate revenue for the fund. The payments range from $10 to $26 per week for a maximum of 13 weeks in any one year. The legislation is administered by the State Workmen's Compensation Board.

The Washington law, had it been approved on the referendum vote, would have created a special fund to be raised by employee contributions amounting to one per cent of the first $3,000 of wages received in the calendar year. The Act authorized payments of $10 to $25 a week for a maximum of 25 weeks in any one year. This legislation is an extension of the Unemployment Compensation Act and the amount of benefit payable for disability would have been the same as for unemployment.

In Rhode Island the weekly benefit range of $6.75 to $18 was increased to a range of $10 to $25 per week. California amended its existing legislation to provide that a person eligible for unemployment disability benefits and unemployment benefits in the same benefit year, may receive the maximum of both. Formerly, benefits to such persons were limited to one and one-half times the maximum for either type of benefit.

During 1949 both Ohio and Massachusetts passed laws setting up commissions to study the problem of unemployment due to disability.

In its 1950 legislative session New Jersey amended its disability compensation law. The maximum weekly benefit was increased from $9 to $10. The required qualifying wages were lowered from 30 times the weekly benefit amount to 25 times that sum. This resulted in reducing the minimum qualifying wages from $270 to $250.

Discrimination in Employment

A recent development in labour legislation has been the passage of fair employment practice Acts designed to eliminate discrimination in employment based on race, creed, national origin and ancestry. Prior to 1949, New Jersey, New York, Massachusetts and Connecticut had enacted such legislation while Indiana and Wisconsin had introduced measures providing for voluntary compliance. In 1949 compulsory Acts were passed by Oregon, New Mexico, Washington and Rhode Island. These State laws, though similar, are not identical in coverage, administration, or in the types of discrimination prohibited. In 1950, Massachusetts extended its fair employment practices legislation. In the same year Rhode Island, with a view to eliminating discrimination on the basis of age, created a legislative committee to investigate the practices of hiring and discharging employees because they have reached the age of 40 years or over.

With reference to the 1949 legislation, the New Mexico and Rhode Island Acts covered establishments employing four or more workers while Oregon included establishments of six or more employees and Washington eight or more. New Mexico, Rhode Island and Washington established special state boards to administer the legislation while Oregon empowered its Bureau of Labour to carry out the Act. New Mexico and Rhode Island also made provision for educational programs to be conducted throughout their respective jurisdictions for the purpose of eliminating discrimination in employment. Kansas and Nebraska set up committees to study the problem.

Massachusetts revised its fair employment practices legislation during 1950. The powers of the Commission Against Discrimination were broadened to make it responsible for hearing and deciding not only unfair employment practice cases as formerly, but also violations of the prohibitions against discrimination in public places, in advertising, and in public housing developments. Any discrimination because of religion is forbidden in public places. The previous law had merely prohibited discrimination in public places because of race or colour. The new legislation also provides that all persons shall have the right to full and equal accommodations, advantages, facilities and privileges of places of public accommodation, resorts or places of amusement, subject only to the limitations of laws that apply to everyone.

In April, 1950, Rhode Island created a legislative committee to investigate the practices of hiring and discharging employees because they have reached the age of 40 years or over. The committee was directed to include in its report drafts of remedial legislation to prevent the dismissal from employment of persons

between the ages of 40 and 64, or the refusal to employ persons because of age. This committee is expected to report by February 1, 1951.

Industrial Relations

Twelve States made changes in their existing labour relations legislation in 1949. Several States repealed laws restricting union activities. Others passed amendments dealing with labour disputes in public utilities, and some States took steps to develop their conciliation services. There was less legislative action in 1950, only three States having made any significant changes.

In 1949 Delaware and Missouri repealed restrictive laws enacted in 1947 which had regulated union security agreements, made strikes unlawful unless authorized by a majority of all employees in the bargaining unit, prohibited secondary boycotts and set out certain rules for the conduct of labour unions. A New Hampshire Act which prohibited union security agreements in some cases was also repealed.

An amendment to the Michigan Labour Relations Act in 1949 (L.G., 1949, p. 1084) removed some of the restrictions on strike action. The amendment provided that a strike may be authorized by a strike vote in which the majority of all employees casting valid ballots, rather than a majority of all employees in the bargaining unit, vote for the strike.

With respect to labour disputes in public utilities, the Michigan Act was amended in 1949 by the abolition of compulsory arbitration. New Jersey also amended its legislation in connection with labour disputes in public utilities. The Board of Arbitration of New Jersey was empowered to base its findings upon such factors as the welfare of the public, wages, hours and conditions of employment in industries in general and in public utilities in particular, and the effect of technological changes upon the industry concerned.

A new 1950 Virginia Act provides for the seizure and operation of mines by the State in cases of emergencies. A further Virginia law, of some considerable importance, was the anti-trust law amendment repealing the section formerly stating that labour organizations were not to be construed as illegal combinations, trusts, or monopolies under that Act. The amendment specifically added, however, that the provisions of the Act did not abridge the right to strike.

During 1950 Kentucky joined the 10 States enacting laws in 1949 that made it unlawful for an employer to require an employee or applicant for employment to pay the cost of a medical examination required by the employer as a condition of employment.

New Jersey extended the operation of its mediation and arbitration law affecting public utilities which otherwise would have become ineffective after March 31, 1950.

Annual Report of the Department of Labour of Manitoba

A revision of existing legislation was commenced in Manitoba during the past year. An expanding manufacturing industry has increased the volume of inspection work, and in order to avoid duplication of effort and to ensure proper enforcement of the various laws, a new policy has been instituted, whereby the visit of an inspector to a plant is made to serve as many of the departmental sections concerned as possible.

The general review of the work of the Manitoba Department of Labour for the fiscal year ending March 31, 1949, as given by the Deputy Minister of Labour, is supplemented by reports covering its six main branches—Apprenticeship, Fires Prevention, Manitoba Labour Board, Mechanical and Engineering Section, Industrial and Public Safety, and Wages and Hours Section. Statistical tables are appended to each report, usually with comparative data for the preceding year, which give a very complete summary of the activities of the Department in administration, inspection and enforcement. In inspection work, the report points out that a system of co-operation between the various sections is in effect, which is described as follows:—

> Wherever possible and logical, the visit of an inspector to a plant is made to serve as many of the sections as could be affected. Thus, a Wages and Hours inspector checks also for compliance with the Vacations with Pay Act, will turn in reports on sanitary and health conditions, and will report any apparent fire hazards, to draw the situation to the attention of the Factory and the Fire Commissioner's section. Similarly, the Building Inspector when visiting a construction job, to check

upon safety of workmen and sound construction of the building, will verify compliance with the Fair Wage Schedule applicable to the Construction Industry, and the Vacations with Pay Act.

The report comments on the added responsibilities placed upon the Department with the growing industrialization of the Province. Since the war, it is pointed out, industry, largely concentrated in Greater Winnipeg, has become equal in importance with agriculture, both in the number of persons employed and in the value of its products.

Because of changing conditions and the emergence of new types of industry, and because of inconsistencies by reason of "spasmodic and patchwork amendments to meet emergent situations", the need to review and re-write Manitoba's labour legislation, consisting of 20 or more Acts, has become apparent. With this in mind, the labour legislation in other provinces and countries is being studied and an attempt made to achieve a high standard, with maximum uniformity of definition and language in the various laws administered by the Department.

A start in this, necessarily, long-range program was made in 1948 by re-writing the Building Trades Protection Act. At the same time the Steam Boiler and Pressure Plant Act was divided into two correlated Acts, the Steam and Pressure Plants Act and the Operating Engineers and Firemen Act.

An amendment to the Vacations with Pay Act, 1947, provided that the Act be extended to transitory employees working in the construction industry in Greater Winnipeg. Employers engaged in this industry are obliged to affix in each employee's vacation stamp book stamps to the value of two per cent of the wages earned in each regular pay period.

On April 22, 1948, the Manitoba Labour Relations Act replaced the Manitoba Wartime Labour Relations Regulations Act, 1944, and amendments. The latter legislation was in effect for only three weeks of the fiscal year under review.

Apprenticeship

During the year 188 apprenticeship agreements were completed and 80 cancelled. Three hundred and eighty-two new agreements were entered into as compared with 351 a year previously. Of the total number of apprenticeship agreements in effect at the close of the fiscal year 43·3 per cent were held by ex-service personnel and 56·7 per cent by civilians, as against the corresponding percentage of 69·7 and 30·3 for the previous year, an indication that the majority of apprentices today are being recruited from civilian ranks.

Six hundred and fifty of the active apprentices or 76 per cent are located in designated trades in the Greater Winnipeg area. It is of interest to note that both in Winnipeg and in the remainder of the Province, the majority of the apprentices were at work in the sheet metal, plumbing, electrical, carpentry and auto body repair and mechanics trades. The report noted that the success of the pre-employment training program for ex-service trainees has led to discussions on the desirability of providing pre-apprenticeship courses for young men and boys seeking to enter designated trades.*

Labour Relations

During the period April 1, 1948, to March 31, 1949, the Manitoba Labour Board received 464 applications under the Manitoba Wartime Labour Relations Act, as amended, and under the Manitoba Labour Relations Act. Under the Vacations With Pay Act and amendment, which is administered by the Board, 237 cases were heard.

Of the former cases, 112 were for the certification of bargaining agents. Of these 100 were granted, six were rejected, three were withdrawn and three were pending at the close of the period under review.

During the year 66 cases requesting the conciliation services of the Board were considered, 16 of these cases being carried over from the 1948 fiscal year. Of the total, 31 were settled by a conciliation officer, and agreements covering approximately 2,103 employees were secured. Three cases were reported back to the Minister when no agreement had been reached. In one case, where no agreement was involved, a settlement was reached. The appointment of a conciliation officer was refused on one occasion and the services of an officer were withdrawn in another case upon the request of the original applicant. The appointment by the Minister of a Conciliation Board was recommended in 11 cases by the conciliation officer concerned. At the close of the fiscal year 18 cases were pending.

Ten Conciliation Board cases were disposed of during the year. In eight cases collective agreements were reached following conciliation, and in one dispute an agreement was reached on matters other than wages. In one dispute the employees went on strike following the report of the Conciliation Board and were still on strike at the end of the year.

* Such courses under the Dominion-provincial arrangement for pre-apprenticeship training are now being conducted in Manitoba to meet the needs of young men leaving high school.

Two Industrial Inquiry Commissions were appointed and submitted reports during the year.

Of the 237 cases under the Vacations With Pay Act the majority, 114, were employee complaints registered under the general Act. Of this number, 75 were settled by payment of the claim.

Boilers, Factories, Elevators and Construction Projects

The work of the Mechanical and Engineering Section of the Department is described at some length. Examinations of candidates for certification as First, Second and Third Class and Provisional Engineers were held by the Stationary Engineers' Board during the year. Under the Operating Engineers and Firemen Act, two new classes of certificates were provided for—Fourth Class, replacing the Provisional Class, and Firemen Certificate. With regard to the construction and alteration of boilers, pressure vessels and steam plants, the report states that the Department is in constant consultation with contractors, plant managers, designing engineers and manufacturers.

The Province of Manitoba was represented at a five-day meeting of provincial boiler inspectors in Toronto. At this meeting a standard form of affidavit to be submitted to the Department by the manufacturer on the completion of new boilers, and containing the necessary information required for inspection services, was agreed upon.

During the year 25 boilers and 30 unfired pressure vessels were condemned or their replacement recommended under the provisions of the Steam Boiler and Pressure Plant Act. The report notes a large increase in new boiler installations. This is accounted for by the development of new industries, the construction of new apartment blocks and a general increase in the use of steam in industry. The Department surveys the designs and specifications of each new boiler or pressure vessel for compliance with the regulations of the Canadian Standards Association. Tests are made at intervals during construction and on completion of each new vessel.

High and low pressure boilers are inspected annually. Boilers operating under 15 pounds per square inch are classified as low pressure while those operating at over 15 pounds per square inch are classed as high pressure boilers. The inspection of these boilers also serves to ensure that plants are being operated by licensed personnel. Nevertheless, semi-annual inspections of major plants are made to ensure that they employ properly qualified engineers. Special inspections are made when second-hand boilers are bought or sold or moved to new locations.

Annual inspections are made of all refrigeration units carrying over 25 pounds of refrigerant in order to guard against the deterioration of pressure-carrying parts and to check on all safety appliances. Yearly inspections are made of wood-cutting machines in conjunction with the City of Winnipeg Licensing Department. The inspection services of the Department of Labour are extended to provide for the annual examination of all industrial and commercial oil burners and appliances. This inspection is made in order that such burners and their appurtenances are safely operated. The testing of welders in gas and arc welding is also carried out by the Department, and certificates are issued in two grades in accordance with the American Society of Mechanical Engineers' Code.

With respect to grain elevators within the Province, all machinery and equipment are inspected regularly. These inspections cover the air tanks, electrical equipment, man lifts, grain cleaners, driving machinery and leg driving equipment and appurtenances contained in elevators.

Under the Building Trades Protection Act, the safety of workers engaged in the construction of buildings, in excavations and in the alteration, repair or demolition of any building is provided for. Periodical inspections are made of all types of construction where scaffolding, high trestle work, hoists, etc., are used. During the fiscal year, 495 inspections were made under this Act and 110 orders were issued.

Designs for new elevator installations or alterations to present machines are submitted to the Department for survey and approval. During the year 266 elevator operators were examined by the Elevator and Hoist Board. Inspections numbered 3,012 and during the same period 194 re-inspections were carried out. As a result of these investigations, 1,109 orders were issued by the Department.

Under the Electricians Licence Act, the Board of Examiners conducted examinations for journeymen electricians' licences at which 49 candidates were successful. It is noted that in these examinations candidates who had been trained under the Apprenticeship Act obtained a higher standard than other applicants who had merely helper experience. The number of applicants greatly increased due to the demand for certified electricians to cope with the heavy building program.

During the year the Department conducted 2,444 factory inspections as com-

pared with 2,662 in the previous year. These investigations resulted in 1,605 safety orders and 23 health and sanitation orders being issued. A year previously 1,663 safety and 16 health and sanitation orders were issued.

The Chief Factory Inspector notes as a distinct advance in the improvement of factory conditions the adoption of regulations under the Public Health Act for factories, workshops and offices (L.G., 1948, p. 1437). The up-to-date requirements for toilets, washrooms, lighting and ventilation are accepted as the standard for all inspection work in the Province.

Through the efforts of the Department's factory inspection service, Safety Committees have been established in practically every industry of a sufficient size to justify such groups. In accordance with the practice of previous years, a special industrial safety course was held under the auspices of the Evening Institute of the University of Manitoba. The course, consisting of twelve lectures, was made available to all people employed in industry in the Greater Winnipeg area. First aid courses for industrial workers were continued.

The work of the Manitoba Meat Packers Safety Council which was organized in 1947 has appreciably cut down the accident frequency rate in the plants concerned.

Wages and Hours

The volume of work handled by the Wages and Hours Section of the Department more than doubled that of the preceding year. This Section is responsible for the enforcement of the Fair Wage Act, the Hairdressers Act, the Minimum Wage Act and the One Day's Rest in Seven Act. Although, as noted earlier, the Manitoba Labour Board is responsible for the main administration of the Vacations With Pay Act, the duties of conducting inspections under the Act were assigned to the Wages and Hours Section during the fiscal year.

Under the Fair Wage Act, with respect to the construction industry, the Fair Wage Board establishes an annual schedule of rates and maximum hours of work. The schedule is usually based upon the rates prevailing within the industry and sets up differing rates for two separate zones: Zone "A" covering Greater Winnipeg, and Zone "B", cities and towns having a population in excess of 2,000.

Under this Act 1,294 inspections were made as compared with 390 during the previous year. Three hundred and ninety-eight orders were issued resulting in wage adjustments to the sum of $10,354.47. In the previous fiscal year, wage adjustments amounting to $2,870.51 were made as a result of the 50 orders issued.

Under Part II of the Fair Wage Act, regulations for the barbering trade set out minimum rates and qualifications and maximum hours applicable to owner operators, master barbers, journeyman barbers and barbering improvers.

During the period under review 477 inspections were carried out, 366 in Greater Winnipeg and 111 in other parts of the Province. Inspections during the previous year numbered 697. This year's investigations resulted in one order being issued whereas 28 were issued in the last year.

Regulations under the Hairdressers Act set out conditions similar to those extant under the barbering regulations. The established work-week is set at 48 hours although most shops operate on a 44-hour basis. A total of 1,352 inspections were made as compared with 1,328 in the previous year. The application of the Act does not extend beyond Greater Winnipeg. Inspections made of shops in other parts of the Province are reported under the Minimum Wage Act.

During the year 1948-1949, 3,690 inspections under the Minimum Wage Act and regulations were made, covering 81,581 employees. Of these, 30,899 were female employees. In the fiscal year ending March 31, 1948, 2,653 inspections were carried out, covering 30,689 workers of whom 17,683 were female employees. There were 344 orders issued, a decrease of 15 from the preceding year. Total wage adjustments amounted to $6,724.28 as compared with $5,490.23 in the preceding period.

With respect to the Vacations With Pay Act, two types of inspections are made: annual vacation inspections covering all manufacturing and mercantile undertakings, including barbering and hairdressing shops; and stamp-book inspections covering all building contractors in Greater Winnipeg. There were 3,923 of the former and 326 of the latter. Wage adjustments for the year amounted to $158.83. Of the 42 infractions under the general Act, all were satisfactorily adjusted. Forty infractions were noted under the stamp system, 33 of which were satisfactorily settled and seven were still under consideration at the end of the year.

The report devotes considerable space to the activities of its Fires Prevention and Public Safety sections. Statistics are given to demonstrate the loss of property, the value involved and the fatal and non-fatal accidents which result. The report covers not only industrial and public concerns and accidents, but domestic accidents and damage as well.

UNEMPLOYMENT INSURANCE

Selected Decisions of Umpire Under The Unemployment Insurance Act

The decision printed below relates to the benefit right of an unemployed worker who upon separation from employment was given a bonus. Because of its importance it is printed in full.

Held that the sum of money which was given to the claimant as an act of grace by his employer upon definite and complete separation from his employment, was neither a remuneration within the meaning of (i), nor a compensation within the meaning of (ii) of Section 29 (1) (a) of the Act.—CU-B 598 (July 6, 1950).

DECISION

SUMMARY OF THE FACTS:

The claimant, married, 39 years of age, worked as a bottler for John Labatt Ltd., Brewers, Toronto, Ont., from May 21, 1948 to September 30, 1949. His rate of pay was $1.20 an hour.

On October 1, 1949, he filed an initial application for benefit and gave as his reason for separation from the employ of the said Company:—

"Laid off by Employer—closing of Department."

In the separation questionnaire, the employer indicated that the claimant's employment terminated on September 30, 1949, due to lack of work: "Bottling stopped indefinitely" and that he was paid the following:—

Vacation pay	$24.00
Gratuity	60.00
Bonus	48.00
Pay in lieu of notice	48.00

In view of the gratuity and bonus payments of $60 and $48 respectively, the Insurance Officer disqualified the claimant from the receipt of benefit for the period of October 1, 1949 to October 17, 1949, both dates inclusive, because, in his opinion, the claimant was deemed not to be unemployed for the latter mentioned period within the meaning of Sections 27 (1) (*a*) and 29 (1) (*a*) of the Act.

From the decision of the Insurance Officer, the claimant, on October 18, 1949, appealed to a Court of Referees.

The Court of Referees held a session in Toronto, Ont., on November 1 and November 10, 1949, to hear the case but on both occasions the hearings were adjourned in order to obtain further information from the employer and the claimant's union (International Union of the United Brewery, Flour, Cereal and Soft Drink Workers of America, Local 304).

In a letter dated November 5, 1949, to the Court of Referees, Mr. John Gavin, secretary of Local 304 of the said union, stated in part:—

"Has (the claimant) received compensation for loss of employment equivalent to his wages? The Union submits that he has for one week only. We do not debate that for one week, immediately after his lay-off, he received wages in lieu of notice. This gratuity given by the Company cannot by any stretch of the imagination, be divided by the average weekly wage of the employee and then used as a basis of disqualifying him for that number of weeks. This is clearly not the intent of the regulations. After the first week of this applicant's unemployment he received no more remuneration from the Company, and is therefore entitled to unemployment insurance benefits for his period of unemployment.

"We therefore appeal the decision of the Insurance Inspector that gratuity received from the Company can disqualify an applicant for unemployment insurance for a further period than one week, or whatever period termination notice is given. In other words, if any employee is paid every two weeks, when he receives his two weeks' notice and his severance pay, regardless of the amount, he can only be disqualified for two weeks. The Unemployment Insurance Act does not allow the officer, at his own discretion, to divide the gratuity received into weekly instalments and disqualify the applicant for that period of time.

"We are in accord with good employers who recognize past service of faithful employees. It promotes good relations.

We therefore request that the language in Section 29 of the Act not be used to discourage the generosity of the Labatt Brewing Company and any employer who reserves the right to give a gratuity to an employee."

On November 10, 1949, the Chief Accountant of the Toronto Plant of John Labatt Limited wrote to the Unemployment Insurance Commission's Adjudication Centre in Toronto as follows:—

"For the past several years, the employees of John Labatt Limited have received an annual bonus which normally is based on one week's pay plus a premium for years of service. This bonus is paid purely at the discretion of the Directors of the Company. The gratuity payment which is paid the employees leaving the Company is usually one week's pay for every completed year of service. However, in connection with hourly paid employees, this payment is made again at the discretion of the Management and is not usually paid.

In the case of the lay-off in the Toronto Plant Bottle Shop, the Management made a concession in the form of this gratuity payment. The bonus payment is definitely not a part of the union agreement but, as stated above, is paid purely at the discretion of the Directors of the Company who decide from year to year whether or not such a payment will be made."

The Court of Referees resumed its hearing of the case in Toronto, Ont., on November 14, 1949. The claimant was represented by Mr. John Gavin, secretary of Local 304 of the said union. The majority of the Court upheld the decision of the Insurance Officer in a finding which reads:—

"We find that under Benefit Regulation 5A the vacation pay in lieu of holidays accrued, but not taken during claimant's employment is payable to the claimant without disqualification as a holiday period did not commence within three days of his termination of employment.

"We also find that the pay in lieu of notice is also payable to the claimant without disqualification, this also being exempt under Benefit Regulation 5A.

"As to the gratuity of $60 and the bonus of $48 we are of the opinion that these must be regarded as being in the same category and that both represent compensation for loss of and substantially equivalent to the remuneration claimant would have received if his employment had not terminated, the question remaining to be decided being for what period under Section 29 (1) (*a*) (ii) of the Act claimant received such compensation. On the evidence of the employer it would appear that the gratuity represents one and one-quarter weeks' wages and the bonus one week's wages. We are, therefore, of the opinion claimant should be disqualified for a period of two and one-quarter weeks' following termination of his employment, and we, therefore, DISMISS the appeal and CONFIRM the disqualification imposed by the Insurance Officer. We follow the principles laid down by the Umpire in Cases No. CU-B 258 and 420."

The dissenting member of the Court stated:—

"The Sections and Regulations referred to as governing this case are Section 27 (1) (*a*) of the Act and Section 29 (1) (*a*) of the Act and Benefit Regulation 5A. It is my opinion there is nothing specific in the above sections which should be used to substantiate this disqualification.

"Although the section contains the words 'compensation for loss of, and substantially equivalent to the remuneration he would have received if his employment had not terminated', I do not believe there is anything in the Act which authorizes the Insurance Officer to adjudicate as to whether this is moneys paid as compensation for loss of employment, or moneys earned for past services. It would appear from the evidence this practice of rewarding employees for past services by gratuities and bonuses has been established by this Employer for some time, and I believe good relations of this kind between Employer and Employees should be encouraged. It would appear if we refer to the Insurance Adjudication Manual Section I 363 (3) 'When a claimant receives an amount which was *purely a gratuity*—he would be considered to be unemployed', that there is very good reason to suggest that the appeal against this disqualification should be allowed.

"The claimant made himself available for work as of October 1 and has apparently met all statutory requirements of the Act. I would ALLOW the appeal and REMOVE the disqualification of the Insurance Officer."

From the decision of the Court of Referees, the Ontario Federation of Labour appealed to the Umpire. A hearing was requested by the said Federation and it was held in Ottawa, on June 7, 1950. Messrs. Norman S. Dowd and A. Andras, Executive Secretary and Assistant Research Director respectively of the Canadian Congress of Labour, and Mr. H. S. Relph, Chief Claims Officer of the Unemployment Insurance Commission, were present.

CONCLUSIONS:

The relevant section of the Act reads as follows:—

29 (1) "An insured person shall be deemed not to be unemployed

(*a*) during any period for which notwithstanding that his employment has terminated, he continues to receive

(i) remuneration, or

(ii) compensation for loss of, and substantially equivalent to, the remuneration he would have received if his employment had not terminated."

As pointed out in previous decisions of the Umpire, the general principle underlying Section 29 (1) (*a*) is that insured persons are not to receive unemployment insurance benefit and wages or compensation in lieu of wages at one and the same time.

In this case, however, the claimant, upon being definitely and completely separated from his employment, received $108 in a lump sum as a gratuity and a bonus which was computed on the basis of his weekly pay and years of service. This sum, because it happens to be equivalent to his wages for two and a quarter weeks, should not, in my opinion, be looked upon as having been paid to him in respect to or in consideration of such a period following the termination of his employment and during which he would be deemed to continue to receive money.

Furthermore, I consider that, since the evidence clearly indicates that the said sum was given to the claimant entirely as an act of grace and not as a payment by way of wages in accordance with his contract of service or by way of damages or compensation to which he would have been entitled for loss of remuneration, it was neither a remuneration within the meaning of (i) nor a compensation within the meaning of (ii) of the above quoted section.

I wish to point out, in deference to the Court of Referees, that at the time they rendered their decision, they had no alternative but to apply the jurisprudence established in cases CU-B 258 and 420. Inasmuch as those two decisions are inconsistent with the principle now laid down in the present case, they will no longer be followed.

In arriving at my conclusions, I bore in mind that the Unemployment Insurance Commission, no doubt in the light of facts, knowledge and experience, paved the way for a more lenient interpretation to be placed on Section 29 (1) (*a*) by bringing in Benefit Regulation 5 (*a*) (P.C. 5838, effective January 12, 1949) which has since been replaced by Benefit Regulation 5 (2) (*c*). (P.C. 6126, effective December 28, 1949).

The appeal is allowed.

(Sgd.) ALFRED SAVARD,
Umpire.

Dated at Ottawa, Ont., this 6th day of July, 1950.

Unemployment Insurance Statistics, October 1950*

The monthly report issued by the Dominion Bureau of Statistics on operations under the Unemployment Insurance Act states that during the month of October, 1950, a total of 62,243 initial and renewal claims for unemployment insurance were filed at local offices of the Unemployment Insurance Commission. This represents a seasonal increase over the September total of 49,229 claims but a slight reduction from the October, 1949, level of 69,349 claims.

A similar picture is presented by the number of ordinary claimants on the live register. In October there were 90,301 ordinary claimants on the live unemployment register on the last working day of the month as compared with 79,263 in September and 105,937 in October, 1949.

Of the 101,924 active claimants (ordinary, short-time, and casual) on the live register on the last day of the month, 70,902 or 70 per cent were on the register seven days or more. This represents a slight decline from last month, when 65,982 out of 88,893 claimants (or 74 per cent) were on the register seven days or more.

A total of 56,790 initial and renewal claims were adjudicated during the month. Claims allowed numbered 44,320, while those disallowed or disqualified totalled 12,470. In addition, 2,919 revised claims were disqualified.

Claims disallowed because of insufficient contributions while in insurable employment numbered 5,567. Chief reasons for disqualification were: "voluntarily left unemployment without just cause" 3,865 cases; "not unemployed" 1,783 cases; "refused an offer of work and neglected an opportunity to work" 1,403 cases.

As in September, there was in October a slight increase over the previous month in the number of persons commencing benefit on initial and renewal claims. Claimants

* *See* Tables E-1 to E-7.

commencing benefit in October numbered 33,772, as compared with 32,401 in September and 41,811 in October, 1949.

During the month of October $3,570,904 was paid in benefit in respect of 1,540,670 days, as compared with $3,843,797 and 1,633,140 days in September, and $3,845,541 and 1,675,017 days in October, 1949.

For the week of October 28 to November 3, 65,682 persons received $858,376 in respect of 369,286 days. This represents a normal seasonal change from the situation for the week of September 30 to October 6, when 61,578 persons were in receipt of $812,841 in respect of 352,188 days.

Average weekly duration of benefit and amount of benefit changed only slightly between the weeks of October 28 to November 3 (5·6 days and $13.07) and September 30 to October 6 (5·7 days and $13.20).

Insurance Registrations

Reports received from local offices of the Unemployment Insurance Commission for the month ending October 31, 1950, showed that insurance books were issued to 3,855,937 employees who had made contributions to the Unemployment Insurance Fund at one time or another since April 1, 1950—an increase of 104,938 since September 30, 1950.

As at October 31, 1950, a total of 242,931 employers were registered, representing an increase of 943 since September 30, 1950.

WAGES, HOURS AND WORKING CONDITIONS IN THE LEATHER PRODUCTS INDUSTRY, OCTOBER 1949*

Three-quarters of the plant workers in the Leather Products Industry were on a five-day week in 1949. Time and one-half was the general overtime rate, with a number of establishments paying double time for work on statutory holidays. Annual vacations with pay of one or two weeks were common in the industry. Ninety per cent of the workers were in establishments observing six or more statutory holidays; and one-half of the workers were paid for three or more of the holidays observed. Written collective agreements covered just under two-thirds of the workers in the industry.

Average hourly wage rates in the Leather Products Industry increased 4 per cent during the year ending October 1, 1949, according to annual information obtained by the Economics and Research Branch of the Department of Labour. This raised the index of wage rates in the industry to a high of 228·1 over the base year 1939 as 100. The wage increase in 1949 was the smallest annual increase since 1944, and was less than half that during the previous year when average hourly rates rose 11 per cent.

The normal work week has not changed greatly in this industry since 1947, the last year for which comparable information is available.[1] However, a slightly higher proportion of employees were on a five-day work week in 1949. There has been an increase in the number of establishments paying double time or double time and one-half for work on statutory holidays, particularly in the Leather Tanneries section of the industry. The proportion of workers in establishments which reported a

* Information in this article was prepared from data obtained in the annual survey of wage rates and working conditions for 1949 conducted by the Economics and Research Branch of the Department of Labour. Employers were asked to report on wage rates and certain conditions of work in their establishments during the last pay period preceding October 1, 1949.

Provincial legislation on working conditions may be obtained from the bulletin, *Provincial Labour Standards Concerning Child Labour, Holidays, Hours of Work, Minimum Wages, Weekly Rest-Day and Workmen's Compensation*, an annual publication of the Department of Labour.

[1] See the section on the Leather Products Industry in the article, "Wages, Hours and Working Conditions in the Fur, Leather and Their Products Industries, October, 1947." The LABOUR GAZETTE, January, 1949.

maximum vacation of two weeks with pay has increased during the two years, as has the proportion of workers being paid for some or all of the statutory holidays observed by the establishments.

The main geographical and industrial distributions of the 261 establishments and 21,368 plant workers covered in the survey of the Leather Products Industry are contained in Table I. Leather Tanning and the manufacture of Boots and Shoes are the two major industrial sections of the industry. Establishments manufacturing Leather Gloves and Mittens or Miscellaneous Leather Products comprise the remainder of the firms surveyed in the industry.

More than 96 per cent of the workers were almost equally divided between the provinces of Quebec and Ontario. The remaining workers were employed in six firms in the Maritime Provinces, eight in the Prairie Provinces and six in British Columbia. Most of the workers in the Leather Tanneries Industry were employed in Ontario, while in the Boots and Shoes Industry almost twice as many workers were employed in Quebec than in Ontario.

Wage Rates.—The index of hourly wage rates in the Boots and Shoes Industry increased four per cent in 1949. At October of that year the index had risen to 223·4 over the base year 1939 as 100. All but one of the major occupations in this industry (Table II) showed increases of from two to eight cents an hour. The greatest average hourly increases were obtained by the Male Stitchers and the Treers.

In the Leather Tanneries Industry the index of hourly wage rates increased to 246·9 over the 1939 base of 100, an increase of three per cent during the year preceding October 1949. The ten main occupations in the industry showed increases of from one to five cents an hour, with the Sorters and Shippers receiving the greatest average increase. One-half of these occupations obtained average increases of one or two cents an hour.

The Normal Work Week.—More than one-third of the plant employees in the Leather Products Industry were on a 5-day 45-hour week in 1949 (Table III). Fifteen per cent were on a 5½-day 48-hour week. Considering all of the workers regardless of the number of days worked per week, 38 per cent were normally working 45 hours, 28 per cent were working 48 hours and 13 per cent 40 hours.

The normal weekly hours of work varied greatly between the two major divisions of the industry. In the Boots and Shoes Industry, 37 per cent of the employees were on a 45-hour week and 31 per cent were on a 48-hour week; in the Leather Tanning Industry these proportions were 58 per cent and 13 per cent respectively. There was also much variation in the weekly hours of work between the two main provinces. In Quebec the largest group of workers, 48 per cent, were normally working 48 hours, whereas in Ontario the largest group, 57 per cent, were working 45 hours.

Three-quarters of the workers in the industry were on a five-day week in 1949. This proportion did not vary much between the major sections of the industry but it did vary greatly between the provinces. Sixty per cent of the plant employees in Quebec were working five days a week, as compared with over 92 per cent in Ontario.

Overtime Payment.—Time and one-half was the general rate paid for work after standard daily or weekly hours in the Leather Products Industry. Reports from most of the establishments indicated that no work was done on Sunday; but of those which did report an overtime policy for this day, all but a few paid time and one-half.

One-half of the workers were in establishments which reported paying a premium rate for work on statutory holidays. Of these employees, 53 per cent were in plants paying time and one-half, 30 per cent were in those paying double time and 9 per cent in plants paying double time and one-half. The largest group of workers in establishments paying a premium rate for work on statutory holidays were eligible to receive time and one-half in the Boots and Shoes Industry and double time in the Leather Tanneries Industry.

Vacations with Pay.—Almost one-third of the plant employees were in establishments which gave an initial vacation of two weeks with pay, generally after a year or less of employment (Table IV). All but a few of these workers were employed in the Boots and Shoes Industry. The rest of the workers were employed in establishments which gave an initial paid vacation of one week, or an equivalent, after similar periods of service.

More than 40 per cent of the employees were in establishments where the period of vacation with pay increased as the worker's term of employment lengthened. Most of these workers were those whose initial vacation of one week was increased to two weeks with pay after periods of service of from one to five years. In a few cases the maximum vacation was in-

creased to three weeks with pay after more lengthy periods of employment.

A plant shut-down for summer vacation was reported by 207 of the establishments employing almost 85 per cent of the workers. Two-thirds of these workers were in plants which closed down for one week, over 30 per cent were in those which closed down for two weeks and the remainder were in plants which did not report the period of the shut-down.

Statutory Holidays.—Almost all of the workers in the Leather Products Industry were employed in establishments which reported observing one or more statutory holidays in 1949, with about 90 per cent

(1) Includes rates paid in a few establishments in the Maritime Provinces, the Prairie Provinces and British Columbia.

(2) Ranges include rates for the middle 80 per cent of the workers used in the calculation of the averages.

of them observing six or more days (Table V). The largest group of workers, 45 per cent, were in plants which observed eight statutory holidays.

Forty per cent of the workers, most of whom were in the Quebec Boot and Shoe Industry, were not paid for any of the statutory holidays if these days were not worked. About one-half of the employees were paid for three to eight of the statutory holidays: 13 per cent being paid for three, an equal proportion for five and 11 per cent for eight holidays when not worked.

Statutory holidays in this article include the number of days when a plant is not normally operating because of Dominion, Provincial or Municipal holidays or because of religious holidays regularly observed.

Collective Agreements.—Written collective agreements covering about 64 per cent of the workers in the Leather Products Industry were reported by more than 130 of the establishments. Large numbers of workers were represented by such unions as the National Union of Shoe and Leather Workers (CCL), the National Federation of Leather and Shoe Workers of Canada (CCCL), the International Fur and Leather Workers' Union of the United States and Canada (CIO-CCL) and the Boot and Shoe Workers' Union (AFL-TLC). A large number of workers in Quebec, particularly in the Boot and Shoe Industry, came directly under the Joint Committees established under the Quebec Collective Agreement Act.

Employment Conditions

An analysis of the current employment situation prepared by the Economics and Research Branch, Department of Labour, on the basis of returns from the National Employment Service, reports from the Dominion Bureau of Statistics, and other official information.

November 1950 . . .

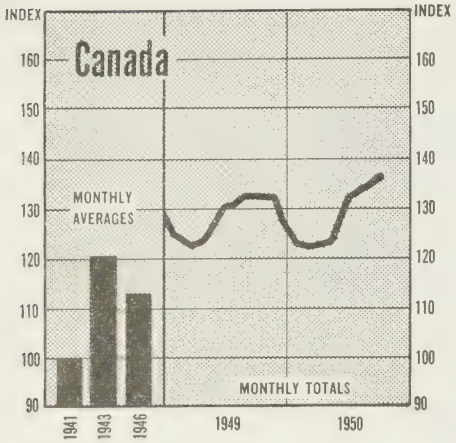
. . . was highlighted by growing shortages of skilled labour on the one hand and a slowly increasing seasonal surplus of unskilled labour on the other. As usual at this time of year, the contraction of such seasonal industries as construction and agriculture has resulted in many unskilled workers seeking alternative winter employment. Some have gone into logging camps but others were flocking to the cities where job opportunities for this type of worker were not as plentiful.

In recent months, the actual and potential demand being made on Canadian productive facilities has been steadily increasing. While the demand for both consumer durables and producers' goods has remained strong, there has also been increasing emphasis on defence requirements. By November, shortages of some metals such as steel and copper had become evident and seemed likely to intensify. Labour generally was in ample supply, although shortages of some skills were developing. There had been some movement of workers into defence plants but, as yet, no large transfer of labour from one section of manufacturing into another has occurred.

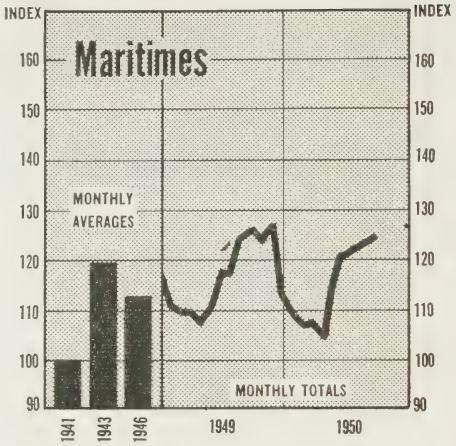
This optimistic employment picture on the one hand was somewhat obscured by the growing number of unskilled workers seeking winter jobs. Many of these had been employed in construction during the summer months, but most outside construction came to an end during November. Moreover, the heavy demand for loggers apparent earlier this fall had been satisfied to a large extent. Those being released from construction would more likely be seeking work in the larger towns and cities where there were few employment opportunities for the unskilled workers.

Thus the apparent paradox has arisen of labour shortages on the one hand and labour surpluses on the other. Many jobseekers were registering at National Employment Service offices, which were keeping up a high rate of placement activity. Nevertheless, the 186,300 registrations tallied at November 30 were 40,000 greater than at the beginning of the month, although about 35,000 less than at the same time last year.

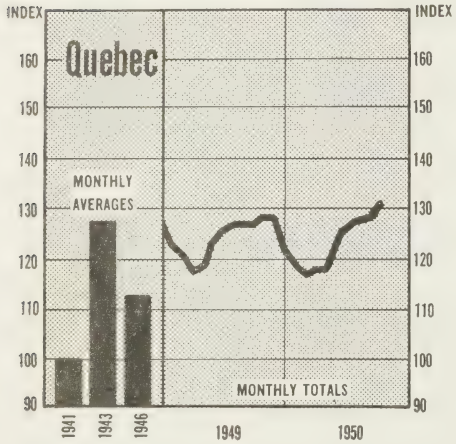
Regional Analysis



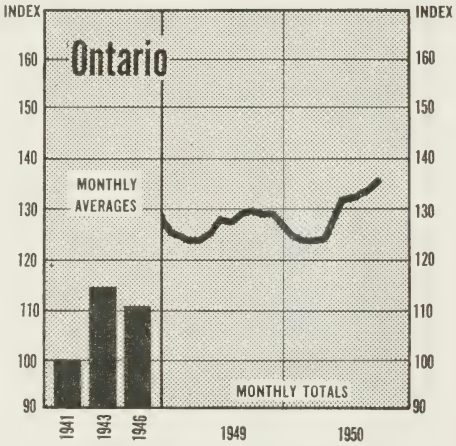
The employment picture in ***Newfoundland*** during November was one of generally sustained activity in the woods, in construction, in mining and in fishing. The approach of winter, however, brought a few more construction workers and fishermen into the labour market. The net result was a slight upturn in the number of registrations on file at National Employment Service offices, ending a decline that had continued until past the middle of the month. By November 30, applications for work totalled 3,300, almost 57 per cent below the level a year earlier. The current total represents only 2·8 per cent of the estimated Newfoundland labour force.



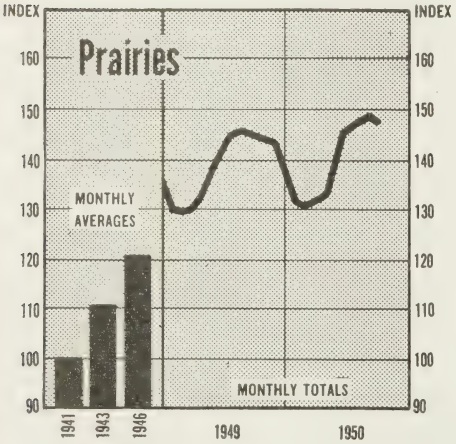
The seasonal decline in employment in the ***Maritimes*** was definitely established in November, as farming, fishing, fish processing and construction began to release workers in increasing numbers. Registrations with National Employment Service offices rose 21 per cent during the month, to total 20,500 at the month-end. Applications represented 3·8 per cent of the labour force and were 19 per cent below the comparable 1949 figure.



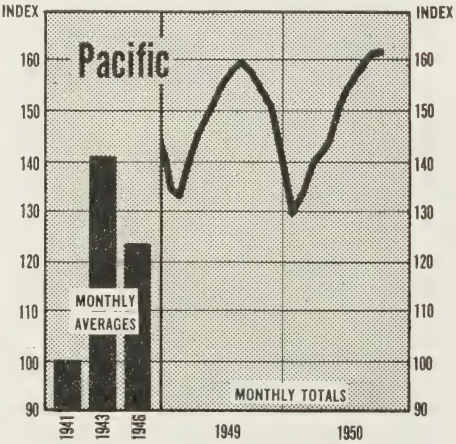
Extensive pulpwood and lumber cutting continued, although hampered by wet weather, but the demand for woods workers slackened as camps became fully staffed. Recently obtained British orders for lumber and pit props will augment the already heavy cutting programs planned for the woods this winter. Employment remained steady in both coal mining and primary iron and steel manufacturing. Because of the low prices paid for potatoes this year in Prince Edward Island



75226—7½



REGIONAL EMPLOYMENT TRENDS



and in the Woodstock area, many farmers have not been keeping on their usual winter help and a larger than usual surplus of farm labour has developed in these districts.

In the ***Quebec*** region, by the end of November, the seasonal increase in job-seekers was well under way. Although holding up well, and with bright prospects for the winter in many areas, the construction industry released a considerable number of workers during the month as some projects were completed and others postponed because of steel and cement shortages. Men were also being released from agriculture, water transportation and some phases of pulp and paper mill operations. In addition, the demand for pulp cutters and other bush workers slackened noticeably and the expansion of sawmilling activity was retarded by continuing mild weather.

These factors, together with some slackness in textiles, clothing and wood products manufacturing in scattered areas, contributed to an increasing surplus of manpower in the Quebec region. Job applications at National Employment Service offices rose by almost 10,000 during November. The month-end total of 55,200, however, remained 18 per cent below the comparable total in 1949, when woods activity was very slack.

Small lay-offs and some short-time work have been occasioned in the heavy industries of Montreal and other centres by shortages of steel. The demand continued strong for steelworking skills, however, and for aircraft production workers, although these were already in short supply.

In the ***Ontario*** region, industries beginning work on defence contracts were conducting intensive recruiting campaigns in search of such skills as machinists, tool and die makers, foundry moulders and aircraft production workers. Steel for manufacturing, as well as for construction, was becoming increasingly difficult to obtain, while supplies of aluminum and copper were reported to be tightening in some areas. In Windsor, during the month, a combination of labour disputes, model change-overs and material shortages kept more than 20,000 persons intermittently off and on the job at auto manufacturing and feeder plants. In Oshawa also re-tooling was under way. A large number were still on indefinite lay-off at the end of November.

Gradually increasing numbers of workers being released from agriculture, seasonal manufacturing and construction brought an increase of slightly more than 8,000 in the total number of active job registrations in National Employment Service files throughout the region during November. The 46,700 total then represented only 2·5 per cent of the estimated labour force. For those who usually turn to the woods for winter work some jobs were still available although the strong demand for bush workers had eased considerably by the end of the month. It was more difficult for unskilled workers seeking jobs in the cities to find suitable employment.

In the ***Prairie*** region, the weather was the main factor in the labour market developments in November. Low temperatures with snow were general by the middle of the month. Highway, railroad construction and maintenance ceased, and in most areas the decline in building construction was sharply accelerated, with resultant lay-offs in these and allied industries. Harvesting operations also ceased, with as much as 50 per cent of the crop in parts of the northern areas still in the fields. This, together with the low grading, and consequent low prices of about one-half of the total crop, brought into the labour force some farmers who would normally remain at home.

Total registrations at employment offices rose during the month from 20,500 to 30,500 at November 30, with noticeable increases in such occupations as construction tradesmen, truck drivers and unskilled labour. This level of registrations was 3 per cent of the estimated regional labour force. The extent of the employment decline varied considerably within the region, being greatest in the north and in the centres of heavy construction activity, least in the south and in the logging areas. At the Lakehead, registrations were but half last year's total. In this area, manpower requirements in the woods were almost satisfied, and the pulp-cutting program, despite a slowdown caused by heavy snow, was up to date.

Seasonal slackening was also evident in some industries in the ***Pacific*** region. But because of the strong demand for metals and lumber, unemployment during the month of November was consistently lower than last year, in spite of unfavourable weather conditions. Active registrations at National Employment Service offices totalled 30,000 at November 30, about 8,000 more than at the beginning of the month. Part of the increase could be attributed to the annual migration from the Prairies and other parts of Canada. The ratio of registrations to the labour force stood at 7 per cent, at November 30, compared to 7·3 per cent a year ago.

The early snow this year caused temporary interruptions in logging and sawmill operations in many areas. Shingle mills, faced with continuing uncertainty in the United States market were still working on a reduced scale. Seasonal slowdowns in construction, hastened somewhat by the snow and rain, also contributed to the lower level of employment, and a considerable surplus of carpenters and unskilled construction labour was apparent at the end of the month.

The employment outlook was considerably brighter than at the same time last year, however, and part of the improvement could be attributed to the expanding base metals industry. The greatest activity was in the Nelson, Duncan and Whitehorse areas. Increased manpower requirements have been easily met so far by an influx of workers from other regions, except in Prince Rupert, where an extreme shortage of housing accommodation has made expansion of the working force difficult.

Industrial Analysis

Eastern ***logging*** operations were at the peak of the cutting season in November in one of the busiest years on record. The influx of men was heavy during the month as farm and construction work finished. As a result, the condition of general labour shortage in the industry which existed early in the fall was changing to one of "spot" shortages in some areas of northern Ontario and in parts of Quebec. Manpower requirements were nearly complete at the Head of the Lakes as a heavy movement of workers from the Prairies took place during the month. Much of this transfer of labour was arranged by the National Employment Service through clearance orders.

With the heavy cut which has been going on since June of this year, pulpwood production has been much higher in 1950 than in the previous year. In the first ten months, 6·9 million cords were cut this year for domestic mills east of the Rockies, compared to 5·2 million in 1949. Consumption had also risen and, as a result, inventories were still below what is considered normal, about 13 or 14 months' supply. At the first of November, about 9·3 million cords were on hand in all land and water positions, enough for about 9 or 10 months consumption.

The logging industry was also active in British Columbia, although operations were hampered by weather conditions. Due to snowfalls or heavy rains, temporary suspension of operations, usually just for a day or two, was necessary in several areas. Men from the Prairies were moving into the province during November and the only shortages of labour were among the more highly skilled operations.

Except for seasonal declines, ***manufacturing*** was generally operating at peak production levels. Material shortages threatened in some divisions but as yet these were not of a serious nature. Detailed analyses of the more active divisions of the industry during November follow:—

Food Products: During November, fruit and vegetable plants were finishing off their season's work and releasing their staffs, some of whom were moving into other temporary work such as tobacco processing. Soft drink manufacturers were also curtailing production as colder weather set in. The candy manufacturing industry was at peak production for the first part of November but lay-offs began during the last week of the month as Christmas work was completed. Flour mills and meat packing firms were in their busy season, although reduced stock receipts affected employment in some parts of western Canada.

Secondary forestry products: Sawmill employment in eastern Canada was declining during November as a great many mills were closing down for the season. Some of the larger mills which were continuing operations reported a shortage of saw-logs during the month. In British Columbia, the lumber industry was generally at capacity operations, with the exception of the shingle industry in which lay-offs were continuing, and a few closures in the northern interior and in areas where poor roads prevented log deliveries. Lumber production in British Columbia in the first nine months of the year was 1,800,000 fbm, about 15 per cent above the same period last year. Labour supply was generally adequate. Pulp and paper mills in all provinces were running at capacity, with pulpwood requirements so high that inventories have not yet been built up to normal levels.

Textiles: In contrast with 1949, most textile plants were busy this fall with fewer lay-offs and less short-time work. There was some movement of workers to defence plants but labour was generally in good supply although a shortage of loopers and seamers was reported by several hosiery plants. Experienced weavers were reported as scarce by some primary textile plants. Defence contracts received to the end of November have created some jobs in the textile industry although the $34,000,000

total of contracts does not bulk very large as yet in an industry whose gross value of production now is over one billion dollars annually.

Iron and steel industries: This industry group was the centre of much of the employment expansion in the manufacturing industry during November. Defence contracts have provided some of this impetus while demand for both consumer durable goods and producers' goods was also expanding. Up to the end of November, defence contracts let in this group totalled $483,000,000 allotted as follows: aircraft, $315,000,000; shipbuilding, $95,000,000; motor vehicles, $48,000,000 and armament firms, $25,000,000.

Tightening steel supplies during the month affected employment in two ways. First, employment has expanded in the basic steel industry to satisfy the strong demand and in secondary steel-using industries to the limit of available supplies. At the same time, occasional lay-offs were made in a number of firms, and expansion of operations was limited by the shortages in some instances. On the whole, however, the number of workers losing employment for any considerable period of time was not significant in terms of the total number of workers.

Buoyancy persisted in nearly every category of ***retail trade*** in spite of the recent credit restrictions imposed on instalment buying by the Federal Government, which became effective on November 1. Purchase of both automobiles and household appliances continued to claim a large portion of retail sales.

Several factors have contributed to the continuing high level of consumer buying: first, the current high labour income, now being bolstered by wage increases in many firms; secondly, some forward buying, especially of consumer durables, in case these items should become in short supply; thirdly, seasonal buying of winter clothing; fourthly, early Christmas shopping.

Although by the end of November, extra hiring had been completed to take care of the Christmas trade in nearly every town and city, no shortage of help for saleswork was evident. The additional employment at this time, however, provided opportunities for many part-time workers, especially married women seeking temporary employment. In many cases, stores take on the same part-time help year after year. By the end of November, most stores had their complement of workers.

Construction activity during November was unusually high for that time of year, although lay-offs became increasingly heavy as the season progressed and more and more projects were completed. Weather conditions in most areas were favourable enough except in the Prairie where sub-zero weather to permit the continuation of outside work, was experienced towards the month's end. Since the season was coming to an end, demand for labour was low and the number of unemployed construction workers increased during the month.

These changes were reflected in the statistics on the number of applications for work received in the National Employment Service offices from construction workers. At the end of November, there were nearly 21,000 applications on file in all offices in Canada, as against 11,000 at the beginning of the month. At December 1, 1949, the total was 27,000.

In the building construction industry, unqualified men were being laid off first; most skilled tradesmen were being kept on for inside work. In highway construction, where most of the labour force can be classified as labourers, lay-offs were proportionately heavier as this type of work is more severely affected by weather conditions. Many of the workers engaged in highway construction work, however, especially those employed by municipalities and provincial governments were being kept on for snow clearing and road maintenance during the winter months.

The general increase in economic activity this fall, together with the seasonal crop movements, resulted in an extra burden on the ***transportation*** industry and expanded employment. This increase was offset in part by lay-offs in some sections of the industry during November. In the railways, section hands, extra gangs and running tradesmen were laid off in all divisions. With inland ports closing, large numbers of stevedores were seeking other jobs.

In the movement of the western wheat crop, car receipts during November showed a decrease from last year. The movement of grain was complicated by the late harvest, shortage of railway cars and ships, and the large amount of damp and hard grain. Due to the conditions of the grain, when it arrived some elevators were operating their driers on a 24-hour basis, and required increased help.

At the close of the season, an eight per cent across-the-board wage increase was granted to crew members of six lake

shipping companies. This increase will make the 1951 monthly wage scale as follows:—

First Cook (Upper Laker)	$255.00
Wheelsman	205.00
Deckhand	170.00
Fireman	197.50
Second Cook	177.50
Porter	160.00
First Cook (Canaller)	$245.00
Watchman or Lookout	182.50
Oiler	205.00
Coalpasser	170.00
Messman	170.00

Employment Service Activities

By the beginning of December there were 43,000 jobs on file at National Employment Service offices across Canada. This was 92 per cent higher than at the same date last year and 34 per cent higher than in 1948. Despite this decided improvement, hiring standards were still high and it will be difficult during the coming winter months for many workers with no particular qualifications to get jobs.

The live file at the December 1 date showed 124,800 applications from men and 61,500 from women. Male applications had fallen by about 40,000 over the year but female applications had risen by 5,000.

The decline in applications from men over the year has been mainly in the unskilled occupations. Many men who were unemployed in 1949 at this time were working in logging camps this year. This has cut registrations for general unskilled work. In the skilled and semi-skilled group the drop in registrations was mainly in the metalworking and electrical trades, although the numbers involved were much smaller than in the unskilled trades.

Most of the increase in applications among women over the year was in clerical and sales occupations although there were also more women registered for unskilled work. The new regulations regarding married women collecting unemployment insurance has had some effect on registrations for employment and a contra-seasonal decline in applications occurred during the last week in November.

Looking more closely at the month of November, it was evident that the seasonal decline was now well under way. Some 39,000 applications were added during the four weeks November 2 to 30 with all regions but Newfoundland showing decided gains. A little less than half of the new applications were from persons in unskilled occupations, most of whom were registered for general work. Applications from skilled and semi-skilled workers in construction rose by 6,000, in transportation by 3,000. At the same time, unfilled vacancies fell off by 7,000 with the decline mainly in occupations where registrations were increasing. One of the few occupations to show a rise in vacancies during the month was sales, where jobs were being reported for the Christmas trade. Claims for unemployment insurance increased by 35,000 during November to total 125,000 at December 1 with $4·2 million paid out in unemployment insurance benefits during the month.

PRICES AND THE COST OF LIVING*

Cost-of-Living Index

The Dominion Bureau of Statistics cost-of-living index rose 0·4 point to 171·1 between November 1 and December 1, 1950. This compares with an index level of 161·5 at December 1949. The latest increase results from slight advances in all group indexes, except rents, which were not surveyed during December. Foods moved from 218·6 to 218·8, as small increases in dairy products and fruits and vegetables over-balanced decreases in meats and eggs. The clothing index rose 0·4 point to 184·9, due to increases in men's and women's wear, piece goods and footwear. The largest group index advance was registered by home furnishings and services, which moved up 1·6 points to 176·4. Increases were general throughout this group. Slightly higher prices for coke advanced the fuel index from 140·6 to 140·7. The miscellaneous index rose 0·7 point to 134·1 following advances in items of personal care and recreation. The rent index remained unchanged at 136·4.

Between August 1939 and December 1950, the cost-of-living index advanced 69·7 per cent.

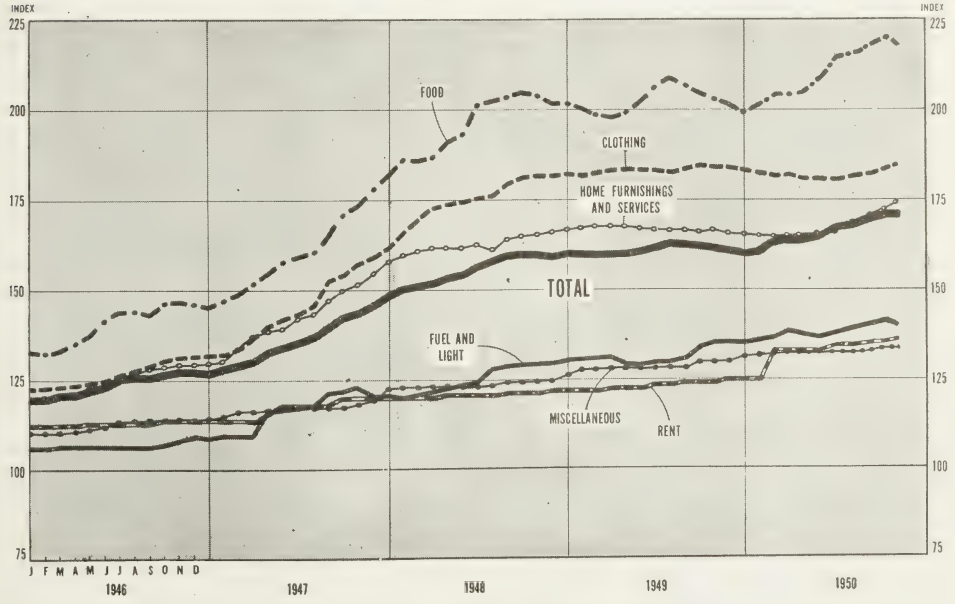
Cost of Living in Eight Cities

Cost-of-living indexes for four centres registered increases between October 2 and November 1, 1950, while declines were recorded for the other four cities. Food prices were generally lower, notably meats. On the other hand, increases occurred at

all centres for home furnishings and services and clothing. Changes were narrow for fuel and light and miscellaneous items indexes. Reflecting the results of the quarterly survey of rentals, city indexes for this series moved higher in seven instances. Saskatoon remained unchanged.

Composite city index changes between October 2 and November 1 were as follows: Vancouver +0·8 to 171·7; Saskatoon +0·5 to 168·7; Edmonton +0·4 to 164·9; Toronto +0·1 to 166·9; Winnipeg —0·1 to 165·3; Halifax —0·2 to 159·1; Saint John —0·3 to 167·5; and Montreal —0·3 to 174·8.

Wholesale Prices, October, 1950



The general index of wholesale prices receded one point from an all-time high of 173·6 in September to 172·6 in October. Index changes were evenly divided in number among the eight major groups. Vegetable Products led in the downward trend with a drop of 4·0 points to 148·7; Non-ferrous Metals moved down 3·5 points to 173·0, while Wood Products followed closely with a decline of 3·4 points to 210·2; Animal Products eased 0·8 point to 181·7. Iron Products rose 4·7 points to 189·2 and Textile Products moved up 4·6 points to 194·6. Chemical Products increased 1·3 points to 129·9 and Non-metallic Minerals 0·2 point to 143·2.

Among important commodity price decreases between September and October were the following: cedar shingles 30·0 per cent; onions (average) 28·2 per cent; cocoa beans 23·3 per cent; shorts 23·1 per cent; soya bean oil 18·2 per cent; cocoanut oil 16·7 per cent; bran 16·6 per cent; ham, Montreal 15·1 per cent; lamb carcass, Vancouver, 14·5 per cent; potatoes (average) 14·4 per cent. Price increases were recorded for the following: spruce lumber, Quebec, 33·3 per cent; plate glass, 10′-15′, 22·3 per cent; turpentine 19·6 per cent; range boiler 15·7 per cent; cheese, new, coloured, Toronto 15·4 per cent; milk, fluid, Halifax 14·7 per cent; rayon yarn, 150 denier, 13·6 per cent; flannel cloth 13·0 per cent; refined glycerine 12·5 per cent.

The index of Canadian Farm Product prices at wholesale, declined 1·4 points to 141·3 between September and October. Animal Products moved down 2·0 points to 204·5 in October, when lower prices for livestock and hides and skins outweighed price increases for eggs, poultry, fresh milk and raw wool. Field Products declined 1·0 point to 103·6 influenced by decreases in potatoes, onions and grains.

COST-OF-LIVING IN CANADA FROM JANUARY 1946

(1935-39=100)

STRIKES AND LOCKOUTS*

Canada, November, 1950

Although fewer work stoppages were in existence during the month, as compared with October, more workers were involved and the time loss was greater by 20,000 days. However, in comparison with November, 1949, the time loss was down more than 85,000 days. About three-quarters of the total workers on strike during November, 1950, were involved in a one-day strike of motor vehicle factory workers at Windsor, Ont., and one-half the total time lost was caused by a strike of steel products factory workers at Montreal.

Preliminary figures for November, 1950, show 17 strikes and lockouts in existence, involving 13,714 workers, with a time loss of 49,125 man-working days, as compared with 20 strikes and lockouts in October, 1950, with 12,557 workers involved and a loss of 29,973 days. In November, 1949, there were 22 strikes and lockouts, involving 8,925 workers, and a loss of 135,690 days.

For the first 11 months of this year, preliminary figures show 131 strikes and lockouts, involving 185,843 workers, with a time loss of 1,380,796 days. In the similar period in 1949 there were 130 strikes and lockouts, with 50,670 workers involved and a loss of 1,039,628 days.

Based on the number of non-agricultural wage and salary workers in Canada, the time lost in November, 1950, was 0·06 per cent of the estimated working time; 0·04 per cent in October, 1950; 0·16 per cent in November, 1949; 0·15 per cent for the first 11 months of 1950; and 0·11 per cent for the first 11 months of 1949.

Of the 17 strikes and lockouts in existence during the month, one was settled in favour of the workers, three in favour of the employers, two were compromise settlements, and four were indefinite in result, work being resumed pending final settlement. At the end of the month, seven strikes and lockouts were recorded as unterminated.

The record does not include minor strikes such as are defined in another paragraph nor does it include strikes and lockouts about which information has been received indicating that employment conditions are no longer affected but which the unions concerned have not declared terminated. Strikes of this nature which are still in progress are: compositors, etc., at Winnipeg, Man., which commenced on November 8, 1945, and at Ottawa and Hamilton, Ont., and Edmonton, Alta., on May 30, 1946; textile products factory workers at St. Lambert, P.Q., August 29, 1949; printers at St. John's, Newfoundland, May 22, 1950; department store clerks at New Westminster, B.C., August 27, 1949; electrical apparatus factory workers at Vancouver, B.C., May 11, 1950; and laundry machinery factory workers at Toronto, Ont., June 16, 1950.

* *See* Tables G-1 and G-2.

Great Britain and Other Countries

The latest available information as to strikes and lockouts in various countries is given in the LABOUR GAZETTE from month to month. Statistics given in the annual review issued as a supplement to the LABOUR GAZETTE for April, 1950, and in this article are taken, as far as possible, from the government publications of the countries concerned.

Great Britain and Northern Ireland

The British *Ministry of Labour Gazette* publishes statistics dealing with disputes involving stoppages of work and gives some details of the more important ones.

The number of work stoppages beginning in September, 1950, was 116 and 16 were still in progress from the previous month, making a total of 132 during the month. In all stoppages of work in progress in the period there were 44,100 workers involved and a time loss of 152,000 working days was caused.

Of the 116 disputes leading to stoppages of work which began in September, eight, directly involving 26,200 workers, arose out of demands for advances in wages, and 43, directly involving 3,100 workers, on other wage questions; three, directly involving 700 workers, on questions as to working hours; 15 directly involving 1,200 workers, on questions respecting the employment of particular classes or persons; 46, directly involving 4,900 workers, on other questions respecting working arrangements; and one directly involving 300 workers, was in support of workers involved in another dispute.

Australia

Figures for the third quarter of 1949, show 111 industrial disputes with 43,919 workers directly involved and a time loss, for workers directly and indirectly involved, of 699,364 man-working days. In the fourth quarter of 1949, there were 178 industrial disputes, directly involving 33,051 workers and a time loss of 58,124 man-working days for workers directly and indirectly involved.

During the year 1949, there were 849 industrial disputes, involving 260,720 workers directly. The time loss given was 1,333,990 man-working days for workers directly and indirectly involved.

United States

Preliminary figures for October, 1950, show 525 strikes and lockouts beginning in the month, in which 180,000 workers were involved. The time loss for all strikes and lockouts in progress during the month was 2,450,000 man-days. Corresponding figures for September, 1950, are 525 strikes and lockouts, involving 275,000 workers with a time loss of 3,500,000 days.

SELECTED LIST* OF PUBLICATIONS RECEIVED IN LIBRARY OF DEPARTMENT OF LABOUR

The publications listed below are not for sale by the Department of Labour. Persons wishing to purchase them should communicate with the publishers. Publications listed may be borrowed, free of charge, by making application to the Librarian, Department of Labour, Ottawa. Students must apply through the library of their institution. Applications for loans should give the number (numeral) of the publication desired and the month in which it was listed in the LABOUR GAZETTE.

Deposits $000,000	.....	.....	3,190	3,007	2,163(8)	1,089(8)

NOTE.—Latest figures subject to revision. Many of the statistical data in this table are included in the Canadian Statistical Review issued by the Dominion Bureau of Statistics.

† Comparable statistics are not available.

(1) Population figures are as at the first day of September 1, for 1950, 1949 and June 1, for 1948, 1944, 1939. (2) Labour Force Survey figures given are as at August 19, 1950, August 20, 1949, September 4, 1948. Detailed figures for August 1950 will be found in the December issue of the Labour Gazette. (3) Average 1926=100. (4) Figures are as at end of quarter ending September 1949, 1948, 1944, 1939 respectively. (5) Real earnings computed by dividing index of average weekly earnings of wage-earners in manufacturing by the cost-of-living index; base: Average for 1946=100. (6) Average 1935-39=100. (7) Newfoundland is included after April 1, 1949. (8) Year end figures. (9)Figures for 1939-44 are production data rather than shipments.

TABLE C-6.—HOURS AND EARNINGS IN MANUFACTURING

(Hourly-Rated Wage-Earners) SOURCE: *Average Hours Worked and Average Hourly Earnings*, D.B.S.

Tables C-6 to C-9 are based on reports from a somewhat smaller number of firms than Tables C-1 to C-5. They relate only to wage-earners for whom statistics of hours of work are also available, whereas Tables C-1 to C-4 relate to salaried employees as well as to all wage-earners of the co-operating firms.

Week preceding	Average Hours Worked			Average Hourly Earnings		
	All Manufactures	Durable Goods	Non-Durable Goods	All Manufactures	Durable Goods	Non-Durable Goods
	no.	no.	no.	cts.	cts.	cts.

Services (as indicated below)	**42·7**	**41·8**	**42·0**	**66·5**	**64·5**	**64·3**	**28.40**	**26.96**	**27.01**
Hotels and restaurants	43·7	42·6	42·5	64·9	62·2	63·1	28.36	26.50	26.82
Personal (chiefly laundries)	40·9	40·1	40·9	70·1	69·3	66·9	28.67	27.79	27.36

* Durable manufactured goods industries.

[1] Based upon June 1, 1941, as 100 p.c., the index numbers of average hourly earnings of wage-earners employed by eight establishments manufacturing heavy electrical apparatus are as follows: 1950, Aug. 1, 248·0; Sept. 1, 251·2; and Oct. 1, 251·0; 1949, Oct. 1, 230·9.

[2] Chiefly street and electric railways.

[3] For information respecting the sex distribution of the persons in recorded employment, see Table C-5.

[4] The situation in the last pay periods in August was affected by the railway dispute. The amount of change resulting from this occurrence is impossible to assess.

TABLE C-10.—EARNINGS, HOURS AND REAL EARNINGS FOR WAGE EARNERS IN MANUFACTURING INDUSTRIES IN CANADA

(Source: Hours Worked and Hourly and Weekly Wages D.B.S. Real Wages Computed by the Economics and Research Branch, Department of Labour)

Note: Average Real Weekly Earnings were computed by dividing the index of the cost of living into an index of the average weekly earnings, both indexes have been calculated on a similar base (Average 1946=100).

Date	Average Hours Worked per Week	Average Hourly Earnings	Average Weekly Earnings	Index Numbers (Av. 1946=100)		
				Average Weekly Earnings	Cost of Living	Average Real Weekly Earnings
		cts.	$			
Monthly Average 1945	45·0	69·4	31.23	103·3	96·7	106·8

Above food prices are simple averages of prices reported. They are not perfectly comparable in all cases with price averages for earlier years. Changes in grading, trade practices etc., occur from time to time. *(a)* Rental ranges shown above are indicative of prevailing rents being paid. They should not be used as a measure of change in rents paid for the same quality of living accommodation over long periods of time. *(b)* Averages include prices for cuts with bone in. *(c)* Including butts. *(d)* Mixed—hock-off, and hock-on. *(e)* Mixed—Carton and loose. *(f)* Loose. *(g)* Estimate. *(h)* Fancy. *(i)* Mixed—California and Australian. *(k)* Pure. *(m)* 360's. *(n)* Mixed—package and bulk. *(p)* Package. *(s)* Mixed—Choice and fancy. *(t)* Tin. *(x)* Mixed—with pectin and pure.

* Preliminary figures.

‡ Strikes unterminated at the end of the previous year are included in these totals.

† The record of the Department includes lockouts as well as strikes but a lockout, or an industrial condition which is undoubtedly a lockout, is not often encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout included as such in the records of the Department is a cessation of work involving six or more employees and lasting at least one working day. Strikes of less than one day's duration and strikes involving less than six employees are not included in the published record unless ten days or more time loss is caused but a separate record of such strikes is maintained in the Department and these figures are given in the annual review. The records include all strikes and lockouts which come to the knowledge of the Department and the methods taken to obtain information preclude the probability of omissions of strikes of importance. Information as to a strike involving a small number of employees or for a short period of time is frequently not received until some time after its commencement.

TABLE G-2.—STRIKES AND LOCKOUTS IN CANADA, NOVEMBER, 1950 (1)

Industry, Occupation and Locality	Number Involved		Time Loss in Man-Working Days	Particulars(2)
	Establishments	Workers		
Strikes and Lockouts in Progress Prior to November, 1950				
MANUFACTURING—				
Boots and Shoes (Leather)—				
Shoe factory workers, Vancouver, B.C.	1	98	1,275	Commenced October 31; for a new agreement providing for increased wages, following reference to conciliation board and arbitration; terminated November 17; conciliation, provincial, and negotiations; compromise.
Textiles, Clothing, etc.—				
Cotton and rayon underwear factory workers, Sherbrooke, P.Q.	1	40	800	Commenced May 11; for a new agreement providing for increased wages, following reference to court of referees; partial return of workers; unterminated.
Weavers and spinners, Grand'Mere, P.Q.	1	56	1,450	Commenced October 2; inter-union dispute re bargaining agency; unterminated.
Metal Products—				
Wire rope and cable factory workers, Lachine, P.Q.	2	164	3,600	Commenced September 5; for a new agreement providing for increased wages, 42½-hour week with same take-home pay as for 45 hours, and adjustment of minor grievances, following reference to conciliation board; unterminated.
Metal factory workers, Fort Erie, Ont.	1	87	1,810	Commenced September 27; for a new agreement providing for increased wages, reduced hours, and revision of incentive plan; unterminated.
Electrical apparatus factory workers, Toronto, Ont.	1	59	1,000	Commenced October 5; demand for increased wages by a union other than the present certified bargaining agency; terminated by November 30; replacement and return of workers; in favour of employer.
Steel products factory workers, Montreal, P.Q.	1	1,000	24,000	Commenced October 31; for a new agreement providing for increased wages, reduced hours, increased union security, sickness and accident insurance, pension plan, extension of vacations with pay, etc., following reference to conciliation and arbitration boards; unterminated.
Shipbuilding—				
Shipyard workers, Vancouver, B.C.	2	507	6,200	Commenced October 18; for new agreements providing for increased wages, payment for nine statutory holidays, double time for Saturdays, and extension of vacation plan, following reference to conciliation boards; terminated November 17; negotiations; compromise.
SERVICE—				
Business and Personal—				
Cleaners and dyers, Toronto, Ont.	1	40	200	Commenced October 4; for a new agreement providing for increased wages, Rand formula for union dues, adjustment of overtime rates, and payment for seven statutory holidays, following reference to conciliation board; employment conditions no longer affected by the middle of November; indefinite.

TABLE G-2.—STRIKES AND LOCKOUTS IN CANADA, NOVEMBER, 1950 [1]

Industry, Occupation and Locality	Number Involved		Time Loss in Man-Working Days	Particulars[2]
	Establishments	Workers		
Strikes and Lockouts Commencing During November, 1950				
MINING—				
Coal miners, Drumheller, Alta.	1	170	170	Commenced November 27; dispute over type of powder to be used for blasting; terminated November 27; negotiations; in favour of workers.
MANUFACTURING—				
Rubber and Its Products—				
Rubber factory workers, Kitchener, Ont.	1	65	130	Commenced November 6; dispute over time standards and other grievances; terminated November 8; return of workers pending settlement; indefinite.
Animal Foods—				
Meat packing plant workers, New Westminster, B.C.	1	70	210	Commenced November 21; dispute over interpretation of clause in agreement re amount of overtime to be worked; terminated November 23; return of workers pending reference to arbitration; indefinite.
Textiles, Clothing, etc.—				
Clothing factory workers, Sherbrooke, P.Q.	3	632	500	Commenced November 17; sympathy with strikers at cotton and rayon underwear factory (listed above); terminated November 17: return of workers; in favour of employers.
Metal Products—				
Foundry workers, Port Colborne, Ont.	1	134	240	Commenced November 8; for a union agreement providing for increased wages; terminated November 9; conciliation, provincial, and return of workers pending settlement; indefinite.
Motor vehicle factory workers, Windsor, Ont.	5	10,500	7,000	Commenced November 22; dispute re job allocation following lay-offs because of material shortages; terminated November 22; return of workers; in favour of employer.
CONSTRUCTION—				
Buildings and Structures—				
Carpenters and labourers, Cornwall, Ont.	1	40	240	Commenced November 23; for dismissal of foreman following dispute with a carpenter; unterminated.
TRADE—				
Garage workers, Brandon, Man.	4	52	300	Commenced November 23; for new agreements providing for increased wages, following reference to conciliation board; unterminated.

(1) Preliminary data based where possible on reports from parties concerned, in some cases incomplete; subject to revision for the annual review.

(2) In this table the date of commencement is that on which time loss first occurred and the date of termination is the last day on which time was lost to an appreciable extent.

CURRENT LABOUR CONDITIONS

This article summarizes the latest employment and labour information available at February 10, as the LABOUR GAZETTE *went to press. It was prepared by the Economics and Research Branch, Department of Labour.*

EARLY in February, the Federal Government announced its intention to spend $5 billion on defence over the next three years, and indicated the nature of the defence preparations which Canada will undertake in co-operation with the United States and other Atlantic Pact nations. At the same time, the Minister of Labour announced that a new National Advisory Council on Manpower will be set up, with 27 members representing labour, management, agriculture and women's organizations, as well as the government departments most directly concerned. The new body is to advise the cabinet on all matters relating to manpower, and to assist in developing plans for its effective use. The Minister made it clear, however, that under present circumstances, manpower needs will be met by voluntary methods.

These announcements came at a time when production has increased to even higher levels than those of the summer of 1950, and considerably above those of last winter. The index of industrial production (base: 1935-39=100) rose to 210·4 in November, about 2·5 per cent above that of June, 1950 and 13·5 per cent above the level of a year before. The index of employment in eight leading industries for the same month reached 137·9 (June, 1941=100) an increase of 4·2 per cent above that of November, 1949.

Only a small portion of this increase in production and employment has been due directly to the defence contracts actually let. Defence orders awarded during 1950 amounted to about $625 million, out of a total national product of about $17·7 billion, and the estimated 100,000 employed directly or indirectly on defence at the present time is a relatively small percentage of a civilian labour force of about 5,200,000.

The international political situation which has made these new defence commitments necessary has resulted in price rises in both domestic and world markets, however, and expectations of further rises and future material shortages have played an important part in decisions of both producers and consumers. From the point of view of employment, the most significant response to these price trends and supply conditions has been the increase in consumer demand, in capital investment, and in total value of exports, especially to the United States.

Capital investment for 1950 by business, individuals and government is estimated at about $3,900 millions, $500 million above that of 1949.

76446—1½

While much of this investment has been in housing and in resource development such as that of the iron mines in Labrador, there was a decided increase in the investment in new plant and equipment among manufacturing firms in the third and fourth quarters of 1950. For the new year, one of the most important projects will be the erection of new steel-producing plant which will add very considerably to Canadian steel capacity. Under the stimulus of rising prices, especially for construction materials, and with the added incentive of possible future shortages, many manufacturers in a wide variety of industries have gone ahead with plans for new plants or for modernizing their present ones.

While buying in anticipation of future price rises and shortages has been an important factor in the recent increase in consumer demand, much of it has been made possible by the steady rise in employment and earnings. This has been reflected in an increase in labour income from $661 million in November 1949 to $733 million in November 1950. Increases in earnings have probably been the more important factor, since between November 1949 and November 1950, average hourly earnings in manufacturing increased by 6·7 per cent, as compared with a 4·3 per cent increase in employment.

All labour groups have not shared equally in the rise in labour income, since the rate of increase in earnings has varied quite widely among manufacturing industries. In the agricultural implements industry, for example, average hourly earnings increased by 10 per cent between November 1950, and November 1949, while in the railway rolling stock industry they rose by only 1 per cent, and in shipbuilding by only 0·5 per cent in the same period.

The increase in consumer demand supported by the rise in employment and earnings has been concentrated on durable goods. In the first nine months of 1950, retail sales advanced about 6 per cent, but sales of automobiles increased by about two-thirds, and that of radios and electrical appliances by 13 per cent. Sales of food and of clothing showed only very moderate gains.

The combination of a strong demand for durable goods, and an increase in capital investment, have been reflected in a rise in employment in the heavy goods industries which exceeds considerably that shown in manufacturing as a whole. Between November 1949 and November 1950, the index of employment in automobiles rose by 10·6 per cent, in electrical apparatus by 15 per cent, in rubber goods by 11 per cent, and for machinery and basic iron and steel by 10 and 11 per cent respectively. Employment in industries manufacturing food and clothing increased much less rapidly.

These statistics of industries manufacturing producers' equipment and consumers' durables indicate that up to the present at least, shortages of labour and materials have not been large enough to prevent considerable expansion in the heavy goods industries.

The third major factor operating in the economy in this past year, the increase in exports especially to the United States has directly affected employment in the primary industries. The United States now takes about 65 per cent of our exports, or about $2,020,988,000 out of a total of $3,118,400,000 in 1950. The largest increase in exports to the United States has taken place in pulp and paper products and base metals.

While employment trends in both mining and logging have reflected this increase in exports, the 30 per cent rise in logging employment is much greater than that in mining. This increased labour demand in

Exports	December	$289,900,000	−1·0	+1·5
Imports	December	$266,200,000	−18·8	+24·7

(a) Estimated on basis of sample labour force survey. Only those who did not do any work in the survey week are here classified as persons without jobs.

(b) Includes ordinary live claimants plus claimants for supplementary benefits.

(c) This percentage compare the cumulative total to date from first of current year with total from same period previous year.

Data in this table are preliminary figures from regular reports compiled by various government agencies, including Dominion Bureau of Statistics, the Unemployment Insurance Commission, the Immigration Branch, Department of Citizenship and Immigration, and the Economics and Research Branch, Department of Labour. Detailed information can be found in the statistical appendix of the Labour Gazette.

Notes of Current Interest

Encourage immigration to Canada by financial assistance

A plan to advance part of the cost of transportation to immigrants whose services are urgently required in Canada was announced on December 29, 1950, by the Hon. Walter Harris, Minister of Citizenship and Immigration.

"The plan will come into effect on February 1, 1951," Mr. Harris said. "The advances will be made on a recoverable basis to the heads of families or single persons who do not have sufficient funds to pay their own way."

Mr. Harris outlined the details associated with this plan which constitutes a major development in Canada's immigration policy:—

"The advances made will apply to transportation from port of embarkation to destination in Canada. The immigrants, however, will be required to contribute not less than thirty dollars, or an equivalent amount in the currencies of their own countries.

"Immigrants accepting these advances must agree to work for a Canadian employer and remain in the same type of employment for a period of one year, or until such time as they have repaid the money advanced to them by the Government.

"To facilitate repayment the immigrants will also be required to give their employers the authority to deduct amounts from their wages which will be applied against the loan. The period during which these deductions will be made will depend on the immigrant's earnings in Canada, but will not exceed twenty-four months."

The plan will be available to selected immigrants from the United Kingdom and Western European countries, and applications may be made to Canadian immigration offices in those countries.

Mr. Harris explained that this plan was developed because of the increasing difficulty being experienced in obtaining workers who can meet Canadian requirements. There are, however, many persons on the continent and in the United Kingdom whose skills are needed in Canada now, and will be more urgently needed in the event of an extensive manpower shortage in the spring of 1951.

On January 26 the conclusion of an immigration agreement with the Government of India was announced, authorizing the admission to Canada of 150 citizens of India a year for permanent residence, provided the immigrants comply with the Canadian Immigration Act. In addition, a citizen of India who is the husband, wife or unmarried child under 21 years of age of a Canadian citizen may be legally admitted.

Program against unemployment approved by UN

Four resolutions to further full employment and economic stability were adopted by the General Assembly of the United Nations on December 12. One noted with satisfaction the "vigorous action" taken by the Economic and Social Council at its last session to promote full and productive employment in an expanding world economy. The Council (whose accomplishments were summarized on page 1874 of the November issue of the Labour Gazette) had recommended a number of domestic and international measures for the purpose. Among other things, it also asked the Secretary-General to prepare studies and questionnaires to this end, and, in addition, to appoint expert groups to report on various aspects of the question.

Recent international events, said another resolution dealing with the current world economic situation, had caused the appearance of new economic factors which might dislocate the general economic stability and the economic progress of many countries. The Assembly therefore asked the Council to give special attention at its next session to current changes in the international economic situation and to recommend measures, both to governments and the Assembly, which would make the uninterrupted progress of development and economic stability programs possible. All members were accordingly invited to submit their views to the Council on the way the present world economic situation had affected their economic progress and the prospects of continuing world economic expansion.

The Assembly also recommended that the Secretary-General and the specialized agencies prepare material to guide the governments of underdeveloped countries, if they so wished, in collecting economic and statistical information which the

Council regarded as necessary for the implementation of its resolution on full employment.

The fourth resolution sought to avoid the possible aggravation of unemployment and under-employment in underdeveloped countries that might arise from mechanizing certain branches of agriculture and industry in order to raise their productivity.

The General Assembly realized that there would be such unemployment in many cases unless additional employment facilities already existed at the time of mechanization or else were simultaneously created in the economy as a whole. It therefore stressed the need for having this problem considered by the expert group which the Secretary-General is to appoint, at the Council's request, to prepare a report on national and international action for reducing unemployment and under-employment in underdeveloped countries. The Assembly accordingly impressed upon him the need to have these experts give due consideration to:—

(i) ways and means of preventing the possible aggravation of unemployment and under-employment;

(ii) social security measures to avoid interrupting the income of workers temporarily unemployed through mechanization or technological progress; account should also be taken of the work of the International Labour Organization in this field.

As regards the work of the ILO, Mr. V. C. Phelan, Canada Director of the ILO, made a statement to the Second Committee of the Assembly outlining the work of the Organization over a period of years in the whole field of employment, and its current activities, in which representatives of workers and employers, as well as governments, participate. Mr. Phelan pledged the co-operation of the ILO with other UN bodies in this field.

UN approves changes in human rights covenant

The United Nations General Assembly on December 4, 1950 gave its approval to a number of recommendations which will considerably alter the final text of the United Nations Covenant on Human Rights. The recommendations, which are in reply to questions submitted to the Assembly by the Economic and Social Council, are dealt with in the January 1 issue of the *United Nations Bulletin*.

On December 10, 1948 the United Nations Assembly adopted the Declaration of Human Rights, the text of which is reprinted in the Labour Gazette, February 1949, pp. 162-5. In the drawing up of a Covenant, the Commission on Human Rights has the task of working out an international instrument which, when ratified by member governments, will have binding effect in the field of human rights. The Commission has also to deal with measures of implementation or enforcement.

For the important work it has so far accomplished, the Commission was commended by the General Assembly. However, the latter declared that the first 18 articles submitted did not include some of the most elementary rights. The wording of these articles, it maintained, should be improved and made more precise to give more effective protection of the rights to which they referred.

The second question put to the Assembly touched on the desirability of special articles defining the applicability of the Covenant to federal states and Trust and Non-Self-Governing Territories. The Assembly, in reply, requested the Human Rights Commission to draw up recommendations to secure the maximum extension of the Covenant to the constituent units of several states. As for Trust and Non-Self-Governing Territories, the Assembly approved of an article ensuring applicability equally to a signatory metropolitan state and to all territories, non-self-governing, trust or colonial governed or administered by it.

To the third question whether the Covenant should contain economic, social and cultural rights, the Assembly decided that it should and that the preparation of such clauses be executed by the Commission in co-operation with other organs and with the specialized agencies. Furthermore, the Covenant should explicitly recognize the equality of men and women in the enjoyment of such rights.

The debate in the Third Committee on these rights revealed sharp differences of opinion as to the urgency of including them in the first draft Covenant, the *Bulletin* had reported in mid-December. Some speakers, including ILO and UNESCO representatives, pointed out the difficulty of defining and implementing these complex rights. Others maintained that a covenant lacking essential economic, social and cultural rights would be not only out of line with the Declaration, but completely unrealistic.

Reviewing the work of the ILO in the field of such rights, V. C. Phelan, director of the ILO, Canadian branch, maintained that international instruments dealing with economic and social rights should be worked out carefully and in detail. Broad statements alone would invite varying

interpretations and thwart their ultimate goal which is to benefit people everywhere. The ILO, Mr. Phelan stated, had worked out several conventions which had the same objective as the articles on economic and social rights in the Declaration. Reiterating the views of the ILO Governing Body on the inclusion of economic and social articles in the Covenant, he said that the place of the ILO should be given full consideration in order to avoid duplication or even conflict as to detail.

On the question of whether the draft contained adequate measures of implementation, the Assembly resolved that the Covenant should include provisions obligating states to encourage the implementation of rights and freedoms laid down, and to take all necessary steps to guarantee these rights to everyone.

These decisions, with one exception, were reached by the Assembly in an over-all resolution adopted on December 4 of last year with 38 votes in favour, seven against and 12 abstentions.

In another resolution the Assembly invited all states and interested organizations to celebrate December 10, the day of the proclamation of the Universal Declaration, as Human Rights Day.

Meeting of ICFTU Executive Board in Brussels

The Executive Board of the International Confederation of Free Trade Unions met in Brussels, Belgium, November 9-11. The meetings were presided over by Mr. Paul Finet, ICFTU president. Canadian representatives at the meetings were Percy R. Bengough, president of the Trades and Labour Congress of Canada, and C. H. Millard, a vice-president of the Canadian Congress of Labour.

It was decided that the next world Congress of the ICFTU will be held in Milan, Italy, commencing July 4, 1951; the next meeting of the Executive Board will also be held in Milan on July 2 and 3.

The Board approved plans for the establishment and development of regional bodies of free trade unions. The hope of the executive was that most of the free trade unions of the world would become organized in this manner.

The Executive Board gave special attention to the problem of aiding underdeveloped countries. A report, designed to serve as the Federation's blueprint for a program of economic and social action in Asia and other underdeveloped countries was adopted. The study reviewed the economic position of workers in these countries, and recommended financial and technical assistance. The need for well-developed trade unions to ensure effective utilization of such aid was strongly emphasized. The report will be presented to the United Nations with a proposal that "concerted international action" be taken to implement its recommendations as soon as possible.

It was also decided to send two delegations to Africa. One would tour North, West, and Central Africa, including Morocco, Algeria, Tunisia and possibly Libya. The second would start its preliminary survey before attending a Regional Trade Union Conference in Duala in February and then continue its work.

The Board approved the recent appointment of Dhyan Mungat as the ICFTU Asian representative; and decided to engage a Director of Education whose immediate work would be to elaborate the program of education in Asia. The new director will work in close co-operation with the Asian trade unions, and the ICFTU Asian representative. The Asian representative was also instructed to proceed to Korea to study the trade union situation movement there and make recommendations for its reconstruction.

In a statement on the trade union situation in Japan, the Executive Board welcomed the establishment of the General Council of Japanese Trade Unions, and congratulated Japanese unionists "who have succeeded in wresting control of their trade union movement from anti-democratic forces." However, the resolution noted that considerable work remained to be done in the attaining of complete unification within the Council. The resolution said in part:—

> The Executive Board recognizes, however, that much remains to be done before the democratic forces in the Japanese trade union movement are fully consolidated in the new General Council. It therefore calls upon all democratic Japanese trade union organizations—confederations as well as individual national trade unions—to take the necessary measures to speed up their unification within the General Council. Moreover, the Executive Board considers that every effort should be made to bring about the affiliation of the General Council to the ICFTU with the least possible delay.

Another resolution protested against the action of the Chinese Communist government in intervening in the Korean war and welcomed "the action of the United Nations aimed at the withdrawal of Chinese troops from Korea." The Board also urged the United Nations to take measures to stop Chinese action in Tibet.

The meeting approved preliminary arrangements for the Latin-American

Regional conference (held in Mexico City from January 8—see below), and adopted a resolution protesting what the ICFTU described as "the repressive measures of the Peruvian dictatorship" against labour organizations in that country.

In bringing this matter to the attention of the United Nations, the ICFTU Executive urged that the UN, together with the "governments of all free and democratic countries" should adopt policies to combat these "repressive measures." The resolution especially demanded protection for " . . . the rights of workers as proclaimed in the United Nations Charter and in many other international resolutions, the adoption of which by various assemblies has never been followed by the desire to translate them into action."

Several recommendations from the European Regional and Education Conferences were approved. Included among these were: a proposal that two summer schools be held in Europe in 1951; and that the Regional Secretariat take over responsibility for the work of the ERP trade union advisory Committee. Proposals for the economic integration of Europe were also endorsed by the Board.

The activities of the Confederation's Schuman Plan Committee were received, and the ICFTU will continue to coordinate the activities of the trade unions concerned in the plan.

The Executive Board also strongly protested against the decision of the Political Committee of the United Nations General Assembly "aiming to revoke the Resolution of 12 December 1946, concerning the withdrawal of Ambassadors and Ministers from Madrid, and also to revoke the recommendation to debar Spain from membership in international agencies. . . ."

Among the other resolutions and recommendations from European trade unions approved by the Executive were: a proposal from the Austrian Federation urging "an inquiry into the possibility of the interchangeability of trade union contributions and benefits of migratory workers;" and an Italian recommendation urging the condemnation of "communist terror and intimidation practised against the free trade unions and their officials."

The Executive Board approved the affiliation of the Swiss Confederation of Labour, and receipt of applications from several countries was announced. The Confederation estimated that these new applications, when accepted, would add about one million more workers to the present strength of more than 50 millions in 58 different countries. An application from the Italian Workers' Union for membership was deferred for further action by the European Regional Secretariat.

Canadian unionists attend meeting in Mexico

A regional conference of the International Confederation of Free Trade Unions, held in Mexico City, the week of January 7, was attended by Percy Bengough and A. E. Hemming, President and Secretary respectively of the Trades and Labour Congress of Canada; and by Pat Conroy, Secretary-Treasurer of the Canadian Congress of Labour, George Burt, Canadian Director of the United Automobile Workers, and Fred Dowling, Canadian Director of the United Packinghouse Workers.

The conference brought together delegates from North and South America to discuss the special problems of labour organization, legislation, and social conditions in the area. Mr. Conroy, who is a member of the Executive Board of the ICFTU, was honoured by election to the post of Co-Secretary of the Conference.

Booklet on pension plans for income tax purposes

The Taxation Division of the Department of National Revenue has issued a booklet providing a statement of principles and rules respecting the application of the Income Tax Act to pension plans. Under the provisions of the Act, "contributions to approved employees' superannuation or pension fund or plan are deductible in the computation of income. . . ."

The booklet points out that an employee is allowed to deduct from his income an amount not exceeding $900 in any one year, if that amount has been deducted from his remuneration by his employer under a pension plan for future benefit payment as a pension. In addition, he is also allowed to deduct an amount not in excess of $900 in any one year, for payments made to make up for back service prior to the inauguration of a plan.

Should the employee's back service payments in any one year exceed $900, the excess over $900 can be used in computing deductions in a subsequent year.

An employer is entitled to a deduction not exceeding $900 paid "to or under an approved superannuation fund or plan in respect of services rendered by each employee, officer or director of the taxpayer in the year. . . ." In addition, if the employer is required to make a special payment (or payments) to the fund in

CANADIAN LABOUR LEADERS IN HISTORIC MEETING

The photograph above records an incident of historical significance for Canadian labour. For the first time the leaders of the four main divisions of trade unionism in Canada met together early in January to formulate a common program on a matter of mutual concern. As a result of the meeting it was decided to draw up a brief asking the Government to reinstitute price controls and to retain rent controls. It was also decided to seek an interview with the Government which would mark the first occasion on which representatives of the four organizations had appeared personally to present a joint submission.

Front row, left to right: Gérard Picard, President, Canadian and Catholic Confederation of Labour; Percy R. Bengough, President, Trades and Labour Congress of Canada; Pat Conroy, Secretary-Treasurer, Canadian Congress of Labour; A. J. Kelly, Chairman, Dominion Joint Legislative Committee, Railway Brotherhoods. Back row: Jean Marchand, Secretary, CCCL; Gordon C. Cushing, Secretary-Treasurer, TLC; W. H. Phillips, Railway Brotherhoods. (President A. R. Mosher of the CCL was absent because of illness.)

respect of employees' back services he may also claim a deduction. However such payment can only be made "following recommendation by a qualified actuary" that the payment is necessary "to ensure that all the obligations of the fund or plan to the employees may be discharged in full;" and provided the employer has made the payment "so that it is irrevocably vested in or for the fund or plan," and provided the payment has been approved by the Minister on the advice of the Superintendent of Insurance.

In giving further details of the nature of a pension plan in order for it to be eligible for income tax deductions, the booklet discusses such topics as: eligibility; amount of pension; past service benefits; future service contributions by employer and employee; past service payments by employer and employee; vesting; settlements on severance or death; payments on retirement; foreign pension plans; insurance contracts; pension trusts; funded trusts; insurance benefits; discontinuance of pension plans; and other conditions governing approval as an accepted plan for income tax deductions.

The booklet, entitled *Pension Plans for The Purpose of The Income Tax Act,* is available from the Taxation Division, Department of National Revenue, Ottawa.

Study of machinist trades

The latest publication to be issued by the Department of Labour in the "Canadian Occupations" series deals with the Machinist and Machine Operator trades.

In announcing its appearance, the Minister of Labour, Hon. Milton F. Gregg, stated that these occupational pamphlets and monographs have proven very popular and that the demand for them continues to grow. Most of the pamphlets are distributed through the ten provincial Departments of Education for distribution directly to high schools, and through the National Employment Service and the Department of Citizenship and Immigration to individuals entering occupations for the first time.

Other publications already in the press cover occupations in the printing industry, and in automotive mechanical and repair work. Monographs covering the building trades and those in natural science and engineering have already been issued.

In advanced stages of preparation are publications on the baking industry, on foundry work, on electronics occupations, on non-professional hospital work, and on mine workers.

Management and labour are showing an increasing interest in the publications. In the province of Quebec, the requests have been especially large for the French edition.

A considerable number of requests, the Minister noted, have been received for the series from other countries, including France, Brazil, Israel and Haiti, in addition to the United States and Commonwealth countries.

More than 700 LMPC's now in operation

A continued increase in the number of labour-management production committees is reported by the Labour-Management Co-operation Service. At the end of 1950, the Service had a record of 710 committees, 20 more than at June 20, 1950. Almost 300,000 employees were employed in plants in which these committees were operating.

Few court actions required over family allowances

Violations of family allowances regulations required court actions in only 26 cases in the latest fiscal year, the Minister of National Health and Welfare, Hon. Paul Martin, reported recently.

Many hundreds of investigations were carried out during the year by the treasury and social welfare officers of the family allowances division, he said, but in only about two dozen instances did the circumstances warrant prosecution.

Parental co-operation is "steadily growing," Mr. Martin stated, and improved facilities for checking registrations of births and deaths are gradually eliminating the possibility of fraud through duplicate applications or the registration of non-existent children.

The same factors are causing overpayments to decrease, he said, and employers, school authorities and welfare agencies are "most helpful" in advancing the objectives of the Act.

Since payments began in July, 1945, more than $1,377,000,000 have been paid to parents. Overpayments outstanding at the end of March, 1950, totalled $451.174.78. These had been reduced to $422,499 as of September 30, or three one-hundredths of one per cent of the total amount disbursed in the five years. Overpayments because of birth date errors have been almost completely eliminated in so far as births during the past three years are concerned.

Studies show, Mr. Martin said, that overpayments occur most frequently when children under 16 go to work for wages,

are absent from school or are not being maintained by their parents. Efforts are continually being made to obtain from parents and others concerned the speediest possible notice when a child becomes ineligible for allowances.

Costs and revenues of Canadian coal mines

The annual survey of operating costs and revenues of the Canadian coal mines for the year 1949 shows that the industry realized a profit of 38 cents per net ton, which is the same as the profit shown by the survey for the year 1948. For the second time in the 19-year history of this report a profit was made by all coal mining areas, according to the Dominion Coal Board.

While total production costs have risen from the low point in 1940 of $3.40 per net ton to a high in 1949 of $6.03, total revenues have similarly increased from the low of $3.43 in 1936 to the highest point on record of $6.41 per net ton in 1949.

Increases in total revenues over those reported in 1948 ranged from 9 cents per net ton for Saskatchewan to 67 cents for Alberta sub-bituminous mines.

Profits in excess of those for the year 1948 were shown by mines in both Saskatchewan and Alberta, the profit increases ranging from 2 cents per net ton for Alberta sub-bituminous to 12 cents for Alberta bituminous mines. Profits less than those for 1948 were shown in mines in Nova Scotia, New Brunswick and British Columbia, the decrease in profit position ranging from 11 cents per net ton for British Columbia to 25 cents per net ton for New Brunswick.

Of the average cost per ton of $6.03, labour cost was computed at $3.63, an increase of 16 cents over the 1948 cost. Labour cost averaged 60 per cent of the cost of each ton produced.

Production per man-day increased excepting in the New Brunswick, Alberta sub-bituminous and British Columbia fields, while Nova Scotia showed no change. The average production per man-day was 3·33 tons.

TLC suspends Vancouver Civic Employees Union

On a charge of failing to comply with the decision of the 64th annual convention, which called upon all affiliated organizations to remove from key positions and to expel from their ranks Communists and sympathizers, the Trades and Labour Congress, on December 12 last, suspended the charter of the Vancouver Civic Employees Federal Union No. 28 (L.G., Jan., 1951, p. 11).

The union was also charged with failing to comply with requests of the General Secretary-Treasurer, under the constitution, for an examination of the books of the union for the protection of the membership.

In the suspending letter President Bengough said:—

"Conclusive evidence has been placed before me proving continuous collaboration between the officers and representatives of Vancouver CEU No. 28 and ranking members of the Labour-Progressive Party to a degree to eliminate any shadow of doubt that (Local 28), under its present leadership, is definitely under Communist control."

Mr. Bengough urged all members of Local 28 to align themselves during the period of suspension with the recently set-up Employees Union No. 407, in order to protect "their standing and their interests in the free trade union movement, as recognized and represented by the TLC and its affiliated organizations."

TLC upholds refusal to seat United Fishermen delegates

Action of the British Columbia Executive of the Trades and Labour Congress of Canada, in refusing to seat two delegates from the United Fishermen and Allied Workers' Union, Vancouver, was upheld by President Percy R. Bengough in reply to a letter of protest from the union.

In line with the anti-Communist policy laid down at the annual convention of the TLC, the delegates were barred from taking their seats at the annual meeting of the affiliated British Columbia unions and district councils, held in Victoria last November (L.G., Jan., 1951, p. 39).

Referring to information he had received, that one of the delegates had tendered his resignation to the Labour-Progressive Party in August last, Mr. Bengough said that he "would need verification of this, and his reasons for resigning" and some evidence that he is "no longer a sympathizer with the aims and tactics of the Labour-Progressive Party."

Mr. Bengough added that he could say quite frankly that the desire for further evidence was without prejudice in any respect to the delegate, and that it arose "from the fact that resignations from Communist Parties and Communist Front Organizations are being produced wholesale of late 'on instructions to go underground.' Naturally we will do all possible to protect any and all individual members but can-

not overlook the more paramount need of protecting our Movement and Unions from new line of attack."

Proposed bill would bar appeal from Quebec Board decisions

On January 12 the Hon. Maurice Duplessis, Premier of Quebec, announced that a bill would be introduced at the resumption of the Provincial Legislature to make decisions of the Labour Relations Board beyond all dispute and not open to question or review in courts of justice. Such legislation, if passed, would prohibit the filing of briefs with the courts requesting a writ of mandamus, certiorari, prohibition, etc.

"These briefs and other actions before courts of justice only paralyse and retard the functions of the Labour Relations Board, and the new Act will declare the Board to be above all action in the civil courts," the Premier stated.

Mr. Duplessis also said that the new Act will exempt the Board from actions which might be taken under Section 50 of the Code of Civil Procedure, which gives the Superior Court the right of supervision over other courts.

Apprenticeship meeting to be held in Quebec

An apprenticeship conference, to be held in Quebec City from May 29 to June 1, 1951, will be attended by delegates from the Canadian provinces, the Department of Labour, and the American states, and by representatives of management and labour.

It has been announced that the agenda will include a study of the apprenticeship system in force in Quebec as well as discussion of various problems connected with the training of apprentices in different trades.

Nearly 700 delegates are expected to attend.

Francq appointed to Quebec board

Marcel Francq, president of the Quebec Federation of Labour, has been appointed a member of the Quebec Labour Relations Board. He will fill the vacancy created by the death last fall of Elphege Beaudoin. Roger Provost, vice-president of the Quebec Federation of Labour, will succeed Mr. Francq as president, while Adrien Villeneuve, international representative of the International Association of Machinists, will be the Federation's new vice-president. Mr. Provost is secretary of the Montreal Trades and Labour Council and represents that group on the City Council.

Laval's Industrial Relations Review

With its December issue, Laval University's Industrial Relations Bulletin became an Industrial Relations Review. Convenient in size, the new Review contains sixty pages of original text. It is bilingual.

The change in format is intended to permit the presentation of more elaborate studies on subjects relating to labour-management relations.

Increase in minimum wage rates in Quebec

From December 16, 1950, the minimum rates for all workers covered by General Minimum Wage Order 4 were raised by 20 per cent. Order 4 fixes minimum wages and general working conditions for factory, shop, office and hotel employees, chauffeurs, messengers, garage workers, watchmen, janitors, certain seasonal employees, telephone operators and various other types of unorganized workers.

The Minister of Labour for Quebec stated that the raise will cover about 400,000 employees under General Order 4. As a result of the increase, the minimum rate for most factory, shop, and office workers in Montreal and district is now 42 cents an hour instead of 35 cents.

A similar increase of 20 per cent went into effect on December 2 for the approximately 80,000 woodsmen who are covered by a special Order (No. 39).

A more detailed statement of these increases in minimum rates will be found in the *Labour Law* section at p. 247 of this issue.

Safety course in Quebec technical schools

A course in industrial safety is being given in technical schools of the Province of Quebec, under the auspices of the Quebec Safety League.

Inaugurated in 1932, with the official sanction of the Provincial Government, the course is now included in the curriculum of the technical schools at Montreal, Quebec, Three Rivers and Hull.

The originator of the course was Colonel Arthur Gaboury, who, in October 1949, was guest of honour of the French Industrialists' Association for the Prevention of Accidents at the inauguration of a similar course at the School of Arts and Crafts in Paris.

The course has been divided into eight lessons, dealing with the following subjects: (1) Definitions and General Principles; (2) Physical Means of Preventing Accidents; (3) Safety Education; (4) The

Safety Organization; (5) Statistics as an Instrument of Research into the Causes of Accidents; (6) Safety Rules; (7) Industrial Fatigue; (8) Organization of First Aid.

Safety code for woodworking industry

At the request of the Canadian Association of Administrators of Labour Legislation the Executive Committee of the Canadian Standards Association recently authorized the organization of a committee to develop a safety code for the woodworking industry. This is the second safety problem on which the CAALL has sought the assistance of the CSA with a view to developing uniform codes which can be made legally enforceable in all Provinces as deemed advisable by the authorities. In 1948, at the request of the Association, a *Code of Practice for Window Cleaning* was drawn up by the CSA and approved as CSA Standard Z-91—1949 (L.G., 1949, p. 677).

The CAALL was organized in 1938 by federal and provincial labour officials for the purpose of improving legislative and administrative standards and bringing about a greater degree of uniformity in provincial laws.

Control of industrial health hazards in Ontario

Health hazards from radioactive materials and from silica and alumina are among problems to be investigated with equipment being obtained for Ontario's division of industrial hygiene with the aid of federal health funds.

This was disclosed recently by the Minister of National Health and Welfare, Hon. Paul Martin, with the announcement of a grant for the study and control of health hazards in industry.

With the increasing use of radioactive materials in factories, in research laboratories and in hospitals, quicker and more accurate methods of determining radioactive contamination are imperative, Mr. Martin said. More than $5,000 of the grant will be used for equipment which can rapidly assess the quantity of radium, radon and gaseous radioactive materials to which a person may have been exposed. Known as a particle counter, this piece of apparatus was developed by the United States Atomic Energy Commission.

The remainder of the grant, about $6,500, will be spent on equipment for investigating health hazards associated with exposure to dust containing particles of silica and alumina and for studying environmental problems such as humidity, temperature, lighting and ventilation.

The Ontario health department has for a number of years been active in combating health hazards in industry, Mr. Martin noted. The extra equipment for its laboratory will enable it to provide a more extensive service, particularly in the new fields of study arising from the use of radioactive substances.

Safety campaign of *B.C. Lumber Worker*

The *B.C. Lumber Worker*, official publication of the International Woodworkers of America, B.C. District Council No. 1, has been devoting considerable space in each issue to endeavours to reduce accidents in the logging industry.

Each weekly edition contains a two-page spread devoted entirely to features on accidents and accident prevention. Among these features are "1950 Coast Logging Accidents," a story of a fatal accident told in a sketched diagram and a few paragraphs relating the events of the tragedy; "The Diary of a Safety Man" by Sawdust Sam; and cartoons such as "Otto Knowbetter" a lumber worker who learns about safety the hard way.

All this is in line with the policy of the International Woodworkers, adopted at its convention held in Minneapolis, to promote a full-scale safety program. The program is to operate through the formation of an international safety council, supplemented by district and local councils.

Slight drop in British trade union membership

A report on trade union membership in the United Kingdom, published by the Ministry of Labour, gives the aggregate membership at the end of 1949 as 9,262,000. This is a slight reduction from the 1948 total, when trade union membership reached an all-time high of 9,309,200.

Trade unions numbered 706, a reduction of 12 from the previous year.

It is noted that in spite of the progressive fall in the number of separate unions as a result of the tendency towards amalgamation, there are still 400 unions with a membership of less than 1,000, most of which had fewer than 500 members. These unions, however, represent only about one per cent of the aggregate trade union membership. About two-thirds of the total membership was accounted for by the 17 largest unions, all having a membership of 100,000 or more.

The general labour organizations group, with a membership of 2,110,470, accounted for the greatest number of members. The metal manufacture, engineering, shipbuilding, electrical goods, vehicles and other

metal trades group came next, with a membership of 1,640,000. Railways accounted for 588,150, and coal mining 794,300.

Female membership was less than one-fifth of the total. However, in certain industry groups, notably cotton and clothing, and in education, it greatly outnumbered the male membership.

The number of federations of trade unions remained unchanged at 51.

At the time of the publication of the above report, the Chief Registrar of Friendly Societies issued a summary of membership and finances of unions of employees registered under the Trade Union Act. This summary relates only to registered trade unions in Great Britain, whereas the foregoing figures pertain to the United Kingdom and include both registered and unregistered trade unions.

In 1949, there were 417 unions on the register, with a total membership of 7,883,736. Revenue from membership for the year was £15,885,000 and from other sources £1,796,000. Benefit payments, including unemployment, dispute, sickness and accident, superannuation, etc., amounted to £4,532,000.

In addition to the 417 employee organizations, there were 96 registered associations of employers, with an aggregate membership of 116,021.

Consumers' councils in British nationalized industries

Consumers' councils, representing consumer interests, as provided for in Britain's nationalizing legislation, have been set up in the coal, gas, electricity, transport, and civil aviation industries. In the first three industries alone, around 700 persons, exclusive of local committees and secretarial staffs, are engaged on remedial and explanatory work on matters affecting the public, the U.K. Office of Information reports.

The Iron and Steel Act, 1949, also provides for the setting up of consumer councils, which must be done within six months of the vesting date.

The functions of consumer councils are to advise their parent authorities of consumer reactions and, conversely, explain to the public, as consumers, reasons for "apparently obscure" actions taken by public boards, in addition to fulfilling their role of "watchdogs over consumers' interests." The councils may act in one or both capacities.

While there is no set form of consumer representation, three distinct patterns, as follows, can be traced, it is observed: (1) national and regional; (2) national only; (3) regional only, with local committees.

In the coal industry, for example, there is two-tier representation at the national level: an industrial consumers' council, whose members represent consumers, sellers and suppliers of fuel in bulk; and a domestic coal consumers' council, whose members represent similar groups concerned with fuel used for domestic purposes. These councils are required to submit annual reports to the Minister, who lays them before Parliament.

In the first two years of its existence, only five complaints were received by the industrial coal council. The domestic coal council, in its second year, dealt with 90 complaints, mostly concerning quality and, as a result of action on the part of the council, it is reported, remedies were provided in a number of cases.

Social insurance reciprocity with U.K.

Through reciprocal arrangements co-ordinating the national insurance, industrial injuries insurance, and family allowances schemes of Great Britain and Northern Ireland and the Isle of Man, these schemes now operate as a single system.

The U.K. also maintains agreements with the Irish Republic for sickness, maternity and unemployment benefits, and insurance of seamen; with New Zealand for family allowances; and with France for sickness, retirement, maternity, death and industrial injuries benefits.

A multilateral agreement on social security, signed by the five Brussels Treaty Powers, was ratified by the United Kingdom in May, 1950 (L.G., Aug., 1950, p. 1136).

Economic Council reports on U.S. economy

The fifth annual report of President Truman's Council of Economic Advisers was issued late in December, and gave a statement of the economic problems facing the United States in 1951. The report urged immediate action by the Administration to introduce price and wage controls, a broader tax program to finance increased defence requirements of the country, and more definite fixing of defence requirements necessary to meet the present world situation.

The report put considerable emphasis on the danger of inflationary pressures. The advisers recommended that the country try to balance the budget, and adopt a pay-as-you-go method of financing defence expenditures.

The economists estimated that some 8½ per cent of American production is now devoted to military needs, and the filling of United States commitments to other countries. They said:—

"The concentration of our productive efforts upon defence objectives could rise far above this point, and we could still maintain a vigorous national economy capable of meeting additional demands upon it."

The report estimated that "it should be possible to increase the total of private and public output by about 25 per cent in the next five years" by a combination of the growing labour force, a longer work week, and the application of technology.

The Council warned that the defence program would be of long duration, and would demand sacrifices from all. "It is certainly not too much to ask that wage-earners forego efforts to increase their living standards during a time when the economy simply cannot produce more civilian goods and also carry the heavy burden of rapid rearmament," the report said. In the matter of wage and price controls, the economists recommended flexibility, and declared that "the trend of wages available for spending after taxation and other restraints should be kept in line with trends in the availability of consumer goods."

Two possible courses in the setting of a wage control policy were outlined in the statement. One possibility was to hold wage lines approximately where they are at present, until such time as the output of consumer supplies could be expanded again; and the other would be to work out wage increase formulas taking into account productivity and cost-of-living adjustments. The Council considered the second approach would have the advantage of providing the wage-earner with incentive, but would be dangerous unless taxes were increased sufficiently to keep wage gains out of the spending stream.

In urging a pay-as-you-go taxation system, the report said:—

> The prospect that the defence effort will be prolonged makes it particularly important to cover the cost through taxes. Borrowing has its place in the financing of a short, intensive effort; but it is dangerous for a long-drawn-out effort. . . .
>
> Unless the borrowing is accompanied in the present by a decrease in spending (an increase in consumer saving) or by a reduction in business investment, the inflationary pressure of increases in Government expenditures will not be offset and immediate inflation will result.

United Labour Policy Committee formed

Organized labour in the United States has formed a fourteen-man United Labour Policy Committee designed "to develop a common approach to the problems arising out of the mobilization and stabilization program."

The Committee represents the American Federation of Labour, the Congress of Industrial Organizations, the Railway Labour Executives Organization, and the International Association of Machinists. The United Mine Workers of America are not represented on the Committee.

In a brief presented to President Truman on December 20, the Committee said that organized labour "wants participation and real leadership in every important agency in . . . (the) . . . mobilization effort." The brief said further:—

> Free labour can make its fullest contribution only if it is permitted to serve at all levels of defence mobilization both with respect to policy and administration. No one group has a monopoly of ideas in the mobilization of our resources. Each group has much to offer and co-operatively we can defeat the world-wide challenge of dictatorship.

The Committee submitted to the President the "basic principles" under which labour would accept wage stabilization. These conditions were:—

> Stabilization policy must permit adjustment of wage rates to compensate for increases in the cost of living;
>
> Contracts which assure wage stability must be recognized;
>
> Stabilization policy must not freeze wages but must allow for flexibility, to provide for correction of substandard wages and adjustment of wage inequities within or between industries;
>
> The Wage Stabilization Board, presently an advisory unit of the Economic Stabilization Agency, should have the authority to make decisions within its own sphere.

The Committee also asked for "an equitable tax, savings and price and rationing control program" which it said would be the answer to the problem of excess purchasing power.

Extent of multi-plant bargaining in U.S.A.

A recent study by the United States Bureau of Labour Statistics, published in the December 1950 issue of *Monthly Labour Review,* shows the extent to which unions are now engaged in multi-plant or multi-employer bargaining.

Under the Labour-Management Relations Act of 1947 (Taft-Hartley Act), the National Labour Relations Board is authorized to determine, in the event of a dispute between a union, or several unions, and an

employer, or group of employers, the scope of the bargaining unit for the purposes of union representation. In some instances, the Board has found the appropriate bargaining unit to be a single craft or group of employees; the bargaining unit, in other instances, has included all production employees in one or several plants of the employer. In still other instances, the Board has decided in favour of a bargaining unit which embraces a number of employers and one or more unions. However, in the majority of cases the parties themselves have, without recourse to State or Federal labour agencies, agreed to establish the area or scope of the coverage of their contracts.

The Bureau of Labour Statistics classifies agreements according to the "employer unit" into several major sub-groups. These divisions show whether the contract (*a*) relates to a single plant or establishment of an employer; (*b*) includes more than one plant or establishment of the same employer (multi-plant bargaining); or (*c*) covers a group of employers formally or informally organized as an association (multi-employer or association bargaining).

In a study last year of 3,376 agreements covering more than four million workers, the Bureau found that out of every 100 contracts 68 related to a single plant (or several plants of the same employer in the same city); that 12 applied to more than one plant of the same company in different cities; that 20 covered a group of employers or an employers' association.

For every 1,000 workers covered by these agreements, it was learned that 280 were included in single plant contracts, that 390 were in multi-plant contracts and that 330 were in multi-employer or association contracts.

These statistics showed that although approximately two-thirds of all the agreements related to a single plant, less than a third of all the workers were covered by sub-contracts. While forming only one-eighth of the total number surveyed, multi-plant agreements nevertheless covered nearly two-fifths of all the workers. This situation, the article states, reflects the prevalent pattern of bargaining in certain industries such as steel, transportation equipment, and rubber in which a number of large companies have plants scattered throughout the country.

The multi-employer or association type of bargaining appeared most frequently in industries which generally consist of a relatively large number of essentially local establishments—printing and publishing, apparel, trade, and services, including hotels and restaurants.

Wage adjustment clauses in U.S. labour contracts

The December 1950 issue of *Monthly Labour Review* has disclosed the results of a survey of wage re-opening provisions in labour-management agreements in the United States. The study was made by the U.S. Labour Department's Bureau of Labour Statistics in the summer of 1950.

General wage renegotiation provisions, which permit wage negotiation or general wage adjustments during the term of the contract, were found to appear in more than half of the 2,754 contracts analysed. There are two broad types of re-opening plans—permissive and automatic. The former plan allows the negotiation of new wage rates at any time or at specified intervals while the agreement lasts. In some instances, the re-opening is permitted only when sufficiently important changes have occurred in general economic conditions, the cost of living, or in prevailing wages, in a locality or industry. The automatic plans make wage changes compulsory in conformance with specified changes in the cost of living, price of given commodities, profits or other factors.

In the case of some agreements, permissive and automatic plans are integrated. These require automatic adjustments within certain limits, after which negotiations on wage rates will be re-opened.

The largest majority (95·6 per cent) of the 1,517 agreements which called for some type of re-opening of the contract to consider wages were permissive or voluntary in character. The automatic type of wage adjustment clause related largely to so-called escalator or cost-of-living clauses gearing changes in wages to changes in consumer prices. While this type of clause appears in several recent agreements, it still represents a small per cent of all general wage revision clauses.

In manufacturing industries, agreements more frequently provided for general wage re-openings than did those in non-manufacturing, the ratios being 61·5 per cent and 41·7 per cent respectively.

Minimum employment age of 18 in U.S. mines

A new hazardous occupations order, adopted in the United States in December, established a minimum age of 18 for employment of minors under the Fair Labour Standards Act—the Federal Wage-Hour Law—in occupations connected with mining, other than coal. The order became effective on January 6,

1951. The coal mining industry is covered by a separate order that has been in effect since September 1, 1940.

The general minimum age for employment under the Fair Labour Standards Act is 16, but the Act authorizes the Secretary of Labour to issue hazardous occupations orders establishing a minimum age of 18 for employment in occupations which he finds to be "particularly hazardous."

The Secretary's new order follows a public hearing last October, and is based on investigation of occupational hazards in the industry made by the Bureau of Labour Standards.

Certain non-hazardous occupations are specifically excluded from the order, but it is made plain that the exceptions do not authorize work in occupations prohibited by other hazardous occupations orders. Among the exceptions are—employment in offices, warehouses, laboratories, maintenance and repair of shops not located underground, above-ground surveying, road repair and maintenance and general clean-up about the mine property.

The order further sets forth that it shall not justify non-compliance with any other Federal or State Law, or municipal ordinance establishing higher standards than those set forth therein.

Safety activities of U.S. Bureau of Mines, 1948-49

Since Federal inspection of coal mines began in December, 1941, the rate of fatal accidents in bituminous coal and lignite mines and anthracite operations has declined, the United States Bureau of Mines reports.

The problem of mine safety has been attacked from many directions, the Bureau says, in reporting on activities during the year ended June 30, 1949. With the aid of a larger staff and an increased appropriation, the safety education program has been broadened, and a record number of operating mines were inspected during the fiscal year. In addition, technical experimentation, protective device and equipment testing, and disaster assistance, as well as analytical investigations and studies, were continued. Specialized training, with particular emphasis on major safety codes integrated in collective wage agreements, was given coal mine safety committeemen and supervisory officials.

Considered by the Bureau as the year's greatest technical advance in coal mine safety was the successful adaptation of roof bolting to prevent roof collapse, and its installation in a number of coal mines.

The reduction in accident rates achieved since Federal inspection of coal mines began is attributed by the Bureau to a number of factors. Noted as the most outstanding are: (1) discovery of hazards through Federal inspection which had previously been "overlooked or ignored by management, labour, and State mine inspectors;" (2) publicizing of unsafe conditions and practices; (3) inclusion in collective agreements of Federal safety codes specifying mandatory compliance; and (4) provisions in union contracts establishing mine safety committees on the local level, with authority invested in them to inspect and recommend improvements to management. "The functioning of these committeemen," the Bureau says, "has brought about better understanding of the need for co-operation between management and labour to maintain safer operating conditions and practices."

Despite records of improvements in accident rates, "much more must be done before accident rates in coal mines will be in line with those of other major industries," it is observed. The combined fatal and non-fatal injury-frequency rate for the bituminous industry in 1948 was 57·43 per million man-hours, and 76·60 for the anthracite. In contrast, the injury-frequency rate for all manufacturing industries averaged 17·2; construction 36·7; and miscellaneous transportation 23·9.

Firm grants $1,500,000 for health research project

A research project to promote better health for its employees and other industrial workers has been announced by the U.S. General Motors Corporation.

According to a report in the *New York Times,* the Corporation has joined with the University of Michigan in establishing the Institute of Industrial Health at Ann Arbor, Michigan, the broad objectives of which will be research, education and service in industrial medicine, health and safety.

The project, for which the corporation is making a contribution of $1,500,000, is to be administered by a board to be appointed by University of Michigan Regents.

Area-wide pension fund started in Toledo

Progress made by the United Automobile Workers (CIO) in seeking an area-wide pension fund in Toledo, Ohio, is reported in *Business Week,* November 4.

It is stated that the union has signed up more than twenty companies, and Richard T. Gosser, UAW-CIO international vice-president in the Toledo area and sponsor of the whole idea, announces that the plan is now operating. A total of 1,000 workers is covered.

The plan is financed by employer contributions of 7 cents an hour for each employee. Reciprocal agreements among employers provide for transfer of a worker's pension credits when he shifts from one shop to another.

The benefits envisaged are $100 a month, including federal social security, at age sixty-five after twenty-five years' service in Toledo pension fund shops.

The union is seeking to extend its plan to forty more small firms in the Toledo area.

Visit of Anzac trade unionists to U.S.A.

At the invitation of the Free Trade Union Committee of the American Federation of Labour, trade union officials from Australia and New Zealand visited the United States on a tour of industrial plants and mines.

Commenting on their visit in *The Australian Worker,* the general secretary of the Australian Workers' Union, Mr. Tom Dougherty, said he "could not fail to be impressed by the efficiency of technical planning, the minimum wastage of materials and manpower, and the abolition of drudgery for the worker.

"At no time did I see any sign of the worker being exploited in this highly industrialized country. Rather, I was impressed at the way in which management consults the worker on methods of improving, not only output, but the working conditions under which it is obtained. . . ."

The visitors were taken to Houston, Texas, where they addressed the AFL annual convention, then in session. Officials of the AFL, *The Australian Worker* reports, announced at the convention that trade union leaders from the United States would return the visit of the Anzac nations, "thus beginning a trail of international trades union visits which are destined to develop into a historical link between the workers of America and Australia." The visitors also had discussions with officers of the CIO and the United Mine Workers.

Expanding health services for ILGWU workers

The International Ladies' Garment Workers' Union (AFL) has developed a growing chain of medical centres for the benefit of its members, according to the *Monthly Labour Review* of December.

The original centre was founded in New York City in 1913. In 1944, health centres were established in Philadelphia and Fall River, and since 1947 at least nine centres have started operations and a number of others will get under way in the near future.

The ILGWU health centres provide diagnostic medical services, the *Review* states, and in some localities also clinic medical care. They also certify the sick-benefit claims paid union members from various health funds. In areas where union membership is widely dispersed, mobile motor-units operating from centrally-located towns conduct health surveys among workers in shops located in outlying communities.

In recent years, the New York City health centre has expanded its services to include case-finding by means of miniature chest X-rays; a simplified form of psychiatry designed to keep emotionally-disturbed workers on the job; special diet education; and special attention to the health problems of the older worker.

An analysis of the first 40,000 miniature chest X-rays revealed 31 active and 835 unsuspected arrested cases of tuberculosis, 522 cases of heart abnormalities, 73 bronchopneumonias, 34 lung tumours, and other chest conditions requiring medical attention.

Meeting of Christian trade unions at Paris

The executive of the International Confederation of Christian Trade Unions (ICCTU) held its 85th session in Paris recently, under the chairmanship of Mr. Gaston Tessier.

In its November 17, 1950, edition, the Montreal newspaper *Le Travail,* which is the official organ of the Canadian and Catholic Confederation of Labour, reports that the executive of the ICCTU, after considering an appeal it had received from the United Nations with regard to helping the civilian population of Korea, decided to forward this appeal to the affiliated national organizations and to ask them to participate in whatever action may be organized in this connection by their respective countries.

Renewing the approval in principle given by the ICCTU to a start in the economic organization of Europe represented by the pooling of coal and steel, the executive showed keen concern for social interests, especially with regard to labour representation on the bodies set up to apply the Schuman plan.

Le Travail reports that the executive held a conference, on the 16th and 17th of November last, of the Christian trade-union organizations most directly interested in this question.

The executive also decided to send a memorandum to the United Nations asking for the inclusion of economic and social rights in the first Convention on Human Rights to be drawn up by the United Nations.

SEASONAL VARIATIONS IN EMPLOYMENT IN CANADA

The Canadian economy is one which experiences marked seasonal variations in employment. Wide differences in temperature and climate, the size of the country, the nature of the basic industries, and the high degree of industrial concentration, are some of the factors operating to magnify the problem of seasonal fluctuations in employment in Canada.

Seasonal unemployment is of two kinds. First, the type of unemployment which exists in an industry which is prevented from carrying on its operations because of the climate and, second, unemployment which exists in an industry of which the products are subject to seasonal fluctuations in demand.

In Canada agriculture, logging, fishing, construction and inland navigation are especially subject to seasonal unemployment of the first type. Seasonal fluctuations in demand are characteristic of such industries as the manufacture of clothing, and may aggravate irregularity of certain industries of the first type, such as construction.

These seasonal industries employ a large proportion of Canadian workers. About 350,000 workers move in and out of the labour force according to the varying seasonal work requirements.

The disadvantages of seasonal unemployment to the employer, the worker and the community are obvious. Within industry itself there have been consistent efforts to find ways of spreading out employment over a larger part of the year. It has been found that the season of employment may be extended in various ways. A notable example is the extension by employers of the duration of logging operations during the war and post-war years. Techniques can often be developed to overcome the obstacles of climate.

International Discussion of Problem

The problem of seasonal unemployment has been discussed at international conferences of employers, workers and governments sponsored by the International Labour Organization. The ILO Technical Committee on Building, Civil Engineering and Public Works has given special attention to the subject and a recent publication, *Seasonal Unemployment in the Construction Industry,* discusses the methods that have been developed in various countries.

One method has been the staggering of starting dates for large construction projects. The installation of heating plants within temporary shelters has been found a practical means of permitting the work to go on during the winter. The practice of closing in buildings to permit completion of work in winter is frequently followed.

One of the arguments against winter construction has been that winter costs are higher. The ILO report indicates that various compensating factors tend to reduce these excessive winter costs.

For instance, competent tradesmen and good materials are easier to obtain in the off-season. Different countries have adopted various means of meeting such problems of added costs as actually do arise. In Finland higher labour costs for winter building have been counter-balanced by the payment of lower wage rates. The report suggests that this solution might be acceptable to unionized workers if a lower winter wage rate were combined with some type of guaranteed income scheme. Along with a reduction in wage rates it is suggested that there should be a reduction in the rate of profit and that off-season discounts on building materials should be obtainable. The Swedish Government has undertaken to take care of the differential on some types of construction by government subsidies.

It is pointed out in the report that together with the real difficulties caused by climatic conditions there is the force of social habit to contend with. Education and persuasion are required to overcome the prejudice of workers, employers and the public against winter building. In Denmark the State of Research Building Institute has carried on an educational compaign to overcome this traditional aversion to winter building. Sweden has made use of building licences issued in accordance with the labour supply to spread out construction over the year.

The report holds that a Public Works program could also be effective by initiating public building projects in the off-season. The suggestion that vocational training be carried on in the winter months has also been made. This has been carried out in Canada in connection with training of apprentices for the building trades whose period of class instruction normally falls in the winter months. In Britain there is a program of training workers in more than one trade so that after the completion of one building operation they may carry on at another.

Alternative Employment

There are other instances where alternative employment provides a solution. It is customary in Canada for the less skilled construction workers to take employment in the lumbering industry in the winter months. The National Employment Service program of organizing these and similar movements has been highly developed in Canada. Another normal movement in Canada is from agriculture to woods labour in the winter. Clearance procedures of the Employment Service frequently place workers in jobs outside of their immediate home area. Canvassing of employers for job opportunities brings numerous openings to light.

Where unemployment arises as a result of the seasonal variation in demand rather than through difficulties of carrying on the operation several means are customarily followed to meet the problem of the "peak load". First, employers have attempted to stretch out the season of buying through advertising campaigns and through a seasonal cutting of prices. Secondly, they have introduced supplementary lines or have introduced wholly new lines to fill in the slack season. Thirdly, there is the practice of manufacturing for stock during the slack season if the market for the product is sufficiently stable. Some industries endeavour to manufacture for the export trade in the seasons when the home market is slack.

Effect of Unemployment Insurance

In spite of these efforts within industry to meet the problem and such government assistance as has been given there still remains a large number of workers who have seasonal periods of unemployment. The introduction of unemployment insurance in Canada has done a great deal to alleviate financial distress amongst workers whose continuity of employment is broken as a result of seasonal influences. All insured workers except those engaged in pursuits where unemployment in the off-season is virtually a certainty are protected throughout the year. Recent changes in the Unemployment Insurance Act have provided additional or supplementary benefits during the slack winter months to several classes of claimants who are unable to qualify in the usual manner. Seasonal regulations have been revised to permit payment of benefit to almost any worker from a seasonal industry who is able to fulfill the regular conditions for receipt of benefit, who makes application for employment of a kind suitable in his circumstances and normally available at the time of year he applies, and who, if his principal occupation is not insurable, can show that in the previous off-season he has worked under a contract of service for not less than 30 per cent of the time in insured employment, some combination of insured and excepted employment, or in excepted employment for someone not related to him by blood, marriage, or adoption. The coverage of the Act and the protection it affords are being extended as rapidly as administrative considerations permit to the widest possible segment of our employed population.

Aside from the stimulus provided to the Canadian economy with the opening of hostilities in 1939, and the following period of reconstruction and post-war expansion, it is often considered that the most powerful influence in reducing seasonal unemployment and allaying the hardships accompanying such unemployment has been the inauguration of the Unemployment Insurance Act in 1940.

To illustrate the problem of seasonal unemployment which nevertheless remains even in years of relative prosperity, and the extent of financial assistance provided under the Act, a few instances may be cited of the number of claimants receiving benefit and the amount of benefit paid out in representative months of recent years when peak and minimum claim loads were experienced.

In the month of August, 1947, the number of beneficiaries under the Act was 42,700, and a total of $1,516,000 was paid out in benefit. By March, 1948, beneficiaries had increased to 154,800 and benefit payments reached $6,630,000. In August, 1948, beneficiaries numbered 55,000 and benefit payments amounted to $1,836,000. The following March beneficiaries rose to 240,000 and benefit totalled $10,361,000. August, 1949, beneficiaries numbered 62,700, with $3,717,000 paid out. Corresponding figures for March, 1950, were 220,000 and $15,747,000, and for August, 1950, were 67,300 and $4,420,000. At the end of last December, 102,000 persons were on benefit,

(2) The seasonal amplitude represents the percentage difference between peak and trough employment.

and during the month they drew $5,304,000 in benefit. Since supplementary benefit was provided last year some 100,000 claimants have received a total of more than $4,500,000 under the plan.

In the comparatively prosperous year 1950 there was paid out in unemployment insurance benefit the amount of $85,824,000. This figure is significant of the extent of financial assistance now provided to Canadians who find themselves unemployed, as a result of seasonal or other causes, when compared with the peak payment of $96,365,000 in direct unemployment relief provided by federal, provincial and municipal governments in the depression year 1934.

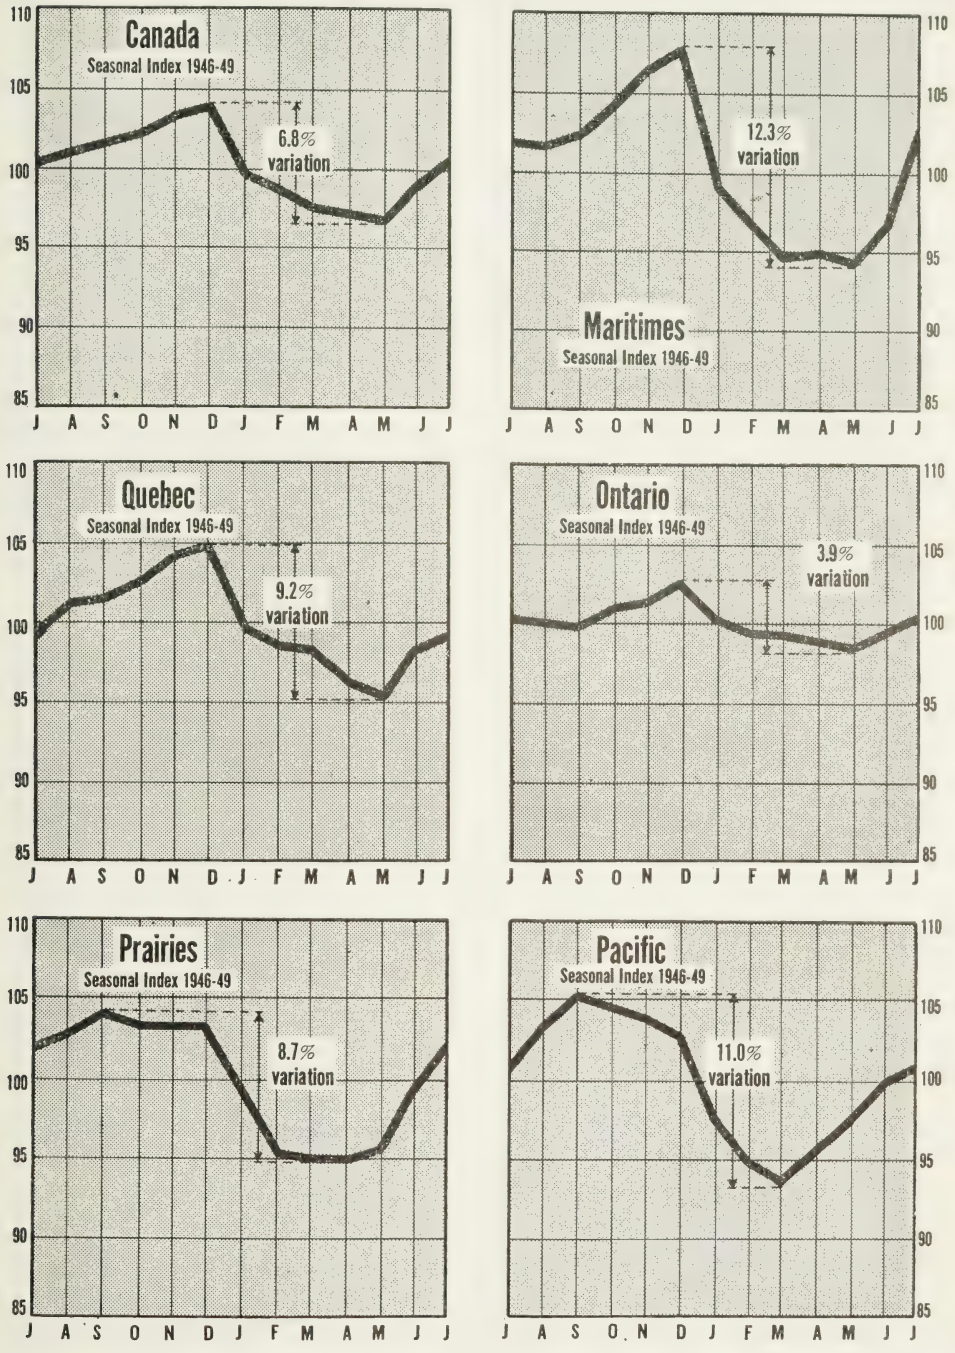
Explanation of Charts and Table

The following charts and table illustrate the seasonal variations in employment that have taken place in a number of Canadian industries as well as for Canada as a whole and for the five economic regions of the country, during the four-year period 1946 to 1949. The seasonal patterns shown on a geographical basis represent the combined seasonal variations of the eight leading industries, namely manufacturing, logging, mining, communications, transportation, construction and maintenance, services and trade.

All the data appearing in the table and charts have been based on employment figures reported monthly to the Dominion Bureau of Statistics by firms employing 15 or more persons. Agricultural employment is specifically excluded from this monthly employment survey.

A cursory glance at the charts and table reveals that of the 12 industrial groups and industries shown, logging and construction and maintenance experienced the greatest percentage variation in employment because of the seasonal factor, while manufacturing and mining of the industrial groups and the non-metallic mineral products industry have experienced the smallest percentage changes during the same four-year period.

Some of the industrial groups like manufacturing and trade, though they show



Note on Statistical Method

In studying seasonal fluctuations of employment in any industry or region, the first step must be to calculate seasonal indices by some method. Normal seasonal indices have been calculated from the employment data of the Employment and Payrolls Branch, Dominion Bureau of Statistics. The method has been to compute a centered 12-month moving average and then to express the original data as a percentage of the appropriate centered moving average figure. These percentage deviations were then arrayed by months. A modified mean of the percentage deviations was calculated and this mean was multiplied by a correction factor in order to arrive at a final "normal" or average seasonal index for the period. These seasonal indexes express the level of employment as at the 15th of each month.

smaller percentage declines than certain other industries, lead in the number of employees affected by seasonal lay-offs, mainly because their total employment is relatively high. This is evident by studying the last three columns of the table.

On a regional basis, employment in Ontario has registered the smallest percentage decline because of seasonal fluctuations, while the Maritimes have shown the greatest seasonal amplitude. All regions except Ontario, in fact, experienced a greater percentage seasonal drop in employment than Canada as a whole. However, in terms of number of workers involved in seasonal shifts in 1949, Quebec led all the other provinces followed by Ontario and the Prairies.

COLLECTIVE AGREEMENTS IN THE TOBACCO INDUSTRY*

Collective Agreements covering workers in the tobacco manufacturing plants of Canada are relatively uniform in content. Bargained only in the larger establishments of the industry, they reflect the highly mechanized nature of the work performed. The bargaining agent of the majority of workers covered by the agreements is the International Tobacco Workers' Union (AFL-TLC).

Almost eighty per cent of the working force in the Canadian tobacco industry today are covered by collective agreements. Only slightly more than two thousand of the nine thousand employees are to be found in the many small establishments which do not bargain regularly with their employees. Historically, bargaining for the cigar makers can be traced back to the turn of the present century, but bargaining for all the workers is a development of the past decade. Comparison of the cigar makers' contracts of 1900 with those for tobacco workers generally today shows wide variations.

On the one hand, the character of the 1950 tobacco workers' agreements identifies them with an industry consisting principally of large plants employing a large percentage of female labour and requiring many machine operations. On the other hand, the older cigar maker contracts demonstrate the prominence of the skilled cigar maker and their apprentices in small shops. The effect of increased mechanization in the industry over the years, the changes made in work requirements, and the present form of union organization, all are reflected in the contrasting clauses of the two sets of contracts.

Agreements in the earlier years were bargained by the Cigar Makers' International Union of America (AFL-TLC), one of the oldest American craft unions. Its membership reached a peak in Canada in 1912 and declined thereafter until it now has only one local in Canada. The Tobacco Workers' International Union (AFL-TLC) is involved in the majority of the tobacco workers' contracts today. This union had a small membership in Canada for a short time during the first World War.

In the early 1940's the union returned to Canada, gained considerable membership in the tobacco industry and now holds nine of the thirteen contracts. Other unions in the industry are independent or are chartered by either the Canadian Congress of Labour or the Canadian and Catholic Confederation of Labour.

One of the outstanding differences between the two sets of contracts of the two periods is the inclusion in the present contracts of provisions relating to the employment of women. Whereas there is no reference in the cigar maker contracts to female labour, the contracts signed today, affecting a labour force in which two out of every three members are female, have many such references. This is particularly evident in the wage schedules, which form a part of each of the thirteen contracts now current in the industry. Many job classifications established for the 6,800 workers covered are for female workers only. In addition,

* Study No. 14 in the series *Collective Agreement Studies*, prepared in the Economics and Research Branch of the Department of Labour.

clauses affecting the total labour force of 1,635 in five establishments referred to both women's and boys' rates as being lower by a stated amount than the regular men's rates.

Irrespective of the division of the jobs between male and female workers, clauses defining other aspects of wage payment are generally applicable to all workers. For example, wage rate adjustments based on experience or merit, although not widely found owing to the prevalence of piece work in the industry, apply to all the 1,460 workers under the four contracts in which they are mentioned. Cost-of-living bonus provisions also are indicated as applying to all the 5,600 workers under the eight agreements including them. All but one of the bonus plans stipulate a weekly bonus payment of one per cent of wages for each rise from a given level of one point in the Dominion Bureau of Statistics cost-of-living index, the maximum bonus being limited to thirty-five cents per point rise. The remaining plan provides a twenty-five cent weekly bonus for every one point rise in the index.

The tobacco worker contracts, being devoted exclusively to factory workers, deal without exception with hours of work. From these clauses it would appear that an employee in a tobacco factory would work a scheduled five-day week usually of forty-two hours. He would receive one and a half times his regular wage rate for working hours outside the regular schedule. With the possible exception of maintenance workers, the 6,800 tobacco workers under agreement had a scheduled five-day week. Almost two-thirds, some 4,400 workers, work forty-two hours in the week, four days at eight and one-half hours and one at eight hours. The remainder work five days at nine hours or a forty-five hour week.

For any work outside scheduled hours employees under the tobacco agreements receive one and one-half times their regular rate of pay. In ten contracts the scheduled hours used for computing the overtime of the 6,180 workers affected are the daily hours, weekly hours are used in the remainder.

While all the tobacco firms under agreement pay one and one-half times the regular wage rates for overtime work, only 7 maintain this policy for any of their 4,240 employees who work on Saturday, Sunday or Statutory holidays. Of the remainder, two contracts do not deal with the possibility of their 200 employees working on these days, and four follow the practice of paying time and one-half, double time or triple time depending on the day worked.

In contrast with the cigar maker agreements of the earlier period each one of the present contracts in the tobacco industry provides for a graduated plan of paid vacations. All the workers with one year's service receive one week of paid vacation, but 925 workers under 5 contracts actually qualify for one week at the end of six months and a second week at the end of a year. In the case of 5,975 workers under 8 contracts, plant workers receive two weeks only after five years, although the salaried employees under the same contracts receive the second week at the end of the first year. These salaried employees also receive a third week after 20 years, having been granted this in part at the end of the 10th and the 15th year.

Another point of difference between the early cigar makers' contracts and present day agreements in the tobacco industry is that the latter regularly make provision for seniority rights. In the agreements studied the majority of contracts grant seniority rights on a company-wide basis. Seniority recognition applies to layoffs, re-hirements and promotion. The remainder of the contracts are not specific in the provisions respecting the 700 workers affected. In 3 establishments employing 2,000 workers special seniority rights are granted for union stewards and officials and to handicapped and disabled persons.

Under the tobacco agreements today almost all the workers are covered by a union shop providing that new employees must join the union and remain in good standing. Less than 500 workers are not required to meet a membership provision. In conjunction with the union membership provisions some two-thirds of the workers under contract are given the opportunity of paying their dues through a check-off. With the exception of less than 150 workers the check-off authorization is irrevocable.

Each of the agreements discussed in this article covers the workers in a single tobacco plant; together they affect over eighty per cent of the workers in the industry. In all cases the agreements are of one year's duration with provision for the bargaining of a new agreement or the continuance of the existing one. In addition grievance procedures are included for the settlement of disputes arising within the term of the contracts.

FEDERAL-PROVINCIAL FARM LABOUR CONFERENCE, 1950

Federal, provincial and United States Government officials were generally agreed that a shortage of farm labour in Canada and the United States is probable in 1951. The delegates were in favour of continuing the Farm Labour Program, subject to approval by their respective provincial governments.

The Eighth Annual Federal-Provincial Farm Labour Conference was held in the Board Room of the Department of Labour, Ottawa, on November 27 and 28, 1950. Mr. W. W. Dawson, Director, Special Services Branch of the Department of Labour, presided.

The conference was attended by Directors of Farm Labour and other officials from all provinces except Newfoundland, officials of the National Employment Service, the Federal Department of Labour, and other interested Federal departments. Also in attendance were representatives of the International Refugee Organization, the United Kingdom High Commissioner's office, the United States Embassy and the U.S. Bureau of Employment Security.

Items on the agenda included:—

(1) Presentation of reports by the Provincial Directors of Farm Labour and Regional Employment officials on activities of the past year;

(2) Consideration of continuance of the Federal-Provincial Farm Labour Agreements and program for 1951;

(3) Prospective requirements for farm labour in 1951, and possible sources of supply.

Welcoming Address by Hon. Milton F. Gregg

The Minister of Labour first paid tribute to his predecessor in office, the late Humphrey Mitchell. He then congratulated the Federal and provincial officials on having worked out a technique to meet many of the problems arising in connection with farm labour. Started as a war effort, the Federal-Provincial Farm Labour Program operated so well that it has been continued into the post-war years, Mr. Gregg said.

He expressed the thought that the Farm Labour Program, with its experience in meeting the need for mobility of labour, might provide valuable background for the future. "In the light of uncertainties of the immediate future, I would feel that there is a growing need for the type of effort you are carrying out."

At the request of the chairman, Dr. W. F. Darke, Agricultural Adviser to the U.K. High Commissioner, gave a brief outline of the farm labour situation in Great Britain.

Provincial Directors' Reports

The chairman reviewed the past year's activities. Comparing the present employment situation with that of a year ago, when there was a seemingly adequate supply of labour, he expressed the opinion that farm labour requirements in 1951 would be more difficult to meet than they were in 1950. With increasing industrial employment and the steady migration of young people from the farms to urban centres, the outlook for farm labour in 1951 is not promising, he said, and the conference provided an opportunity for making plans which could be implemented if farm labour shortages should arise. The chairman then called upon the Provincial Directors of the Farm Labour Program and the Regional Employment officials for their reports.

Throughout the reports a number of problems appeared more or less common to all provinces. Among these were: (1) questions involved in bringing in displaced persons for farm employment; (2) maintaining a better ethnical balance by securing more immigrants from the British Isles; (3) accommodation for married workers and their families; (4) winter housing; (5) selection of farm workers; (6) finding new sources of help when the present ones are exhausted.

Prince Edward Island.—Mr. W. R. Shaw, Deputy Minister of Agriculture for the Province, reported that, apart from some slight shortages at certain periods during the summer season of 1950, no great difficulty had been experienced in meeting farm labour requirements. The largest demand from the farmers, he said, continues to be for single men because of the limited accommodation for married couples.

The main movement, as in previous years, was for assistance in harvesting the potato crop. A total of 677 potato pickers moved in from Nova Scotia and New Brunswick and, on the whole, gave favourable service. Including local workers, 1,200 placements for potato pickers were made through the Summerside and Charlottetown Employment Offices.

A new plan was initiated, Mr. Shaw reported, whereby on completion of the harvest, potato pickers who had given satisfactory service were provided with return transportation. The plan proved satisfactory.

Nova Scotia.—Mr. S. E. Lewis, of the Nova Scotia Land Settlement Board, reported that the supply of farm labour in 1950 had been almost adequate.

With prospects of a good apple crop but a discouraging marketing outlook, it was felt at the beginning of the season that a percentage of the crop would remain on the trees and that the demand for pickers would not be heavy, he said. As the season advanced, however, the outlook brightened and the demand for pickers increased. Final returns were not available but preliminary figures indicated that transportation had been paid on about 150 workers. A much greater number found their own way to and from the apple harvesting areas.

The flow of displaced persons for farm labour into the Province had practically ceased, Mr. Lewis said.

In co-operation with the Settlement Service of the Department of Citizenship and Immigration, 54 Dutch male immigrants, 22 of whom were married and had families, had entered the Province during the year and been placed as farm labourers.

New Brunswick.—Mr. E. M. Taylor, Provincial Director of Farm Labour, reported that during the first four months of 1950 the farm labour situation was generally favourable, and it was not until the movement of a small group of farm workers to Ontario for haymaking took place that a shortage of workers for farm operations in New Brunswick was felt. The gap for haymaking, he said, was fortunately filled by displaced persons.

Wet weather delayed the grain harvest so that it ran into the potato harvesting season. Anticipating a repetition of the 1949 free movement of workers to the potato area, the movement of 700 potato pickers to the State of Maine, under international agreement, was agreed to, Mr. Taylor said, but a further request brought the number up to 1,000. When a shortage was apparent a publicity campaign had to be instituted to recruit workers, and finally a transportation policy was adopted to assist in procuring the necessary workers.

The Province was currently experiencing a shortage of farm labour. The potato farmers, who have been consistent employers of labour, paying competitive wages, Mr. Taylor stated, "are in the depths of a depressed market for potatoes and are financially depressed." Owing to the migration in numbers of young men from the potato growing area, and with woods operations at a high level and likely to continue so, together with the doubtful ability of farmers to pay competitive wages, present indications are that there will be a shortage of farm labour in 1951.

Quebec.—Reporting on the 1950 situation in Quebec, Mr. Alex. J. Rioux, Director of the Farm Labour Supply Bureau, said crop yields had exceeded anticipation, and the joint efforts of the Bureau and the National Employment Service were required to meet the pressing need for farm workers.

Two groups of Italian immigrants, totalling 400, were made available, and the farmers with whom they were placed expressed satisfaction with their services. Pending the arrival of these workers, the most essential requirements were met by displaced persons—32 single men and 5 married couples. Ten workers from Newfoundland were also placed on farms, but did not remain, leaving for industrial centres in Ontario.

With the bringing in of 41 tobacco curers into the Joliette area from the United States, the requirements of the tobacco growers were met.

Farmers growing five acres or more of sugar beets were again supplied with the necessary help for thinning and pulling, most of whom were recruited from the Beauce area.

Arrangements were made for about 100 Quebec students to go to Ontario to help with the fruit-picking. This, Mr. Rioux said, "provided them with new opportunities for a better acquaintance with things going on elsewhere, and also helped them to improve their English conversation."

Owing to various circumstances, notably the railroad strike, the Province was unable to meet in full the demands of the Western Provinces for harvesters. Workers included in the first movement, he said, were selected with care, and proved satisfactory, but the urgency of the situation did not permit as careful selection with the final group. A total of 1,182 harvesters were moved to the West.

Ontario.—In the absence through illness of Mr. R. S. Duncan, the Provincial Director of Farm Labour Services, Mr. W. Davison presented the report for Ontario.

Mr. Davison referred to the feeling of uncertainty which prevailed in the early part of 1950 due to the curtailment of United Kingdom contracts for farm products, and the difficulty in consequence of determining farm labour requirements. Farmers were planning on employing less help and it was anticipated that the demand for seasonal workers would be higher than usual. It turned out that Ontario had a bumper harvest and the demand for farm labour was so high that over 600 displaced persons were placed during the months of August and September in year-round agricultural employment. On the whole, he said, labour requirements had been met.

The employment of displaced persons on Ontario farms continued to be an important factor in meeting farm labour requirements, in spite of certain difficulties. The number, however, remaining in agriculture has been disappointingly small, it was noted. In addition to 680 single workers placed on farms in the spring and early summer, 652 unattached workers were placed during August and September. During the year, 128 farm couples and 68 families were placed. Only 19 single domestics and three married women with dependent children were placed on farms.

An innovation, Mr. Davison reported, was the movement in May of a group of 10 men from Newfoundland into the Ottawa area. The experiment proved sufficiently satisfactory to justify movement on a larger scale, and in July 311 men were moved to various points in Ontario. The report on these workers was, in general, favourable, but it was thought that there was room for improvement in screening the men.

A minimum of 1,000 harvest helpers had been requisitioned from the Prairies, he said, but only 480 were received. To supplement this number, 649 workers were recruited in the Maritimes; 132, however, did not remain on the farms long enough to satisfy their employers, some leaving immediately after placement.

Referring to Dutch immigrants, most of them are *bona fide* farmers, it was stated, and for that reason should be a source of satisfactory farm help. It was indicated, however, that about one-third of the families who reached Canada during the past year have either purchased farms of their own or are in process of doing so, or have taken up farms on a share or rental basis, and may themselves be in need of farm labour.

It was reported that owing to the late harvest in Ontario and the nation-wide railway strike, difficulty was experienced in filling the demands for workers to go to the Prairies to assist with the grain harvesting. A total of 1,060 harvesters were dispatched.

Requests for sugar beet workers were again received and arrangements were made for the placement of 125 displaced persons in camps at Chatham, Wallaceburg and Glencoe. These workers proved sufficiently satisfactory that 225 have been requested for the 1951 season.

The annual movement of tobacco curers and primers from the United States was again carried out.

Camps for student workers were again operated under the general supervision of the Ontario Farm Service Force, by Farm Labour Co-operatives and a number of the larger private growers. A total of 950 girls and 350 boys, recruited throughout the Province, were housed in 12 co-operatively-operated girls' camps and 2 boys' camps, and in 7 privately-operated girls' camps and 3 boys' camps. In addition, 93 students from Quebec were placed in the camps.

Manitoba.—Mr. H. R. Richardson, Director of Farm Help for Manitoba, reported that an exceptionally late and backward spring, coupled with a considerable loss of planted acreage in the flood area in the Red River Valley, resulted in a reduced demand for labour for spring operations. In spite of natural drawbacks, however, there was a heavy grain crop and it became increasingly difficult to satisfy local demands. For the first time in many years, Manitoba received help from points in Saskatchewan and Alberta as harvesting in those areas was completed. Harvesting was, in the main, completed by the end of October.

Comparatively few harvesters went west from Manitoba. The first movement under the Harvest Special Tariff took place before the earliest ripening of grain, when 300 excursionists were sent to Saskatchewan and Alberta. A request for helpers for haymaking in Ontario could receive only limited response.

A record crop of sugar beets was harvested. Labour was supplemented by the arrival of around 130 persons in family groups, and 75 single men, from displaced persons camps in Europe. At the commencement of the lifting season two further groups of single men, about 100 all told, were secured through the facilities of the Federal Department of Labour.

Winter employment had been found for the workers immediately following the completion of the beet harvest.

The North Dakota Potato Growers' Association requested helpers to harvest the potato crop, and a movement of potato pickers to North Dakota in September was approved through the proper international channels. By agreement, recruiting was carried out by U.S. Employment Service Officials, and transportation arrangements were undertaken by the Association.

Saskatchewan.—Mr. J. L. Hutchison, Assistant Director of Agricultural Representatives for Saskatchewan, reported that the Province had experienced a disappointing harvest season.

The early favourable crop prospects resulted in a summer shortage of farm labour and forestalled any intensive campaign for recruiting harvest workers locally. The late spring rains delayed harvesting several days, in those districts which are normally cleared up before some of the eastern and northern areas get started. Under the harvest excursion movement, 665 workers were brought in, and it is estimated that an additional 893 came in without the assistance of excursion rates. A total of 4,073 placements were recorded. Fortunately, over 300 excursionists arrived previous to the railway strike, and this early movement took care of urgent demands until the termination of the strike.

Efforts to obtain workers for the Ontario haying were hampered by a number of factors, and a vigorous publicity campaign resulted in only 222 workers being dispatched.

Twenty-five Indians were recruited from the Broadview Agency for spring sugar beet work in Manitoba and, for the fourth season, treaty Indians were recruited for beet harvest work in Montana. The number moved totalled 400.

The demand for displaced persons has been considerably reduced, Mr. Hutchison reported, and it is almost impossible to place families through the ordinary employment channels.

Mr. Hutchison referred to the effect of mechanization on farm operations in Saskatchewan. Experienced truck, tractor and combine operators, he said, are more in demand than stookers, pitchers and teamsters. "The proportions may be 75:25. The day of the big threshing crew is over. There is no place now for groups of workers who wish to stay together. The usual order is for one man, very seldom for two or three."

Alberta.—The Province experienced in 1950 one of the most "bewildering" seasons in its agricultural history, Mr. F. H. Newcombe, Director of Farm Labour for Alberta, reported, and, with the railway strike, created a difficult problem in the placement of farm labour.

Due in part to weather conditions and crop prospects, the demand for general farm help was easier than in previous seasons. Placements of general farm help amounted to 769—almost 100 less than in 1949.

The employment of displaced persons was mainly restricted to sugar beet workers; 675 were employed on this work. The problem of housing of beet workers was again under criticism, Mr. Newcombe said. The grower feels that it is unreasonable to require him to house after the close of the season workers who have no intention of remaining on the farm, or even in beet work.

The railway strike, occurring as it did in the initial stages of the movement of Prairie farm workers, affected the supply, and it was not until heavy rains generally interrupted harvest operations that recovery was made. A total of 738 came into the Province under the movement.

Difficulty was experienced in recruiting workers for Eastern Canada as early and in as great numbers as required.

A number of Dutch immigrants settled in the Province, several of whom were placed in agricultural employment. As in previous years, some church-sponsored immigrant families and single persons were brought in.

British Columbia.—Mr. Wm. MacGillivray, Director, Agricultural Development and Extension for British Columbia, reported that an extremely cold winter had caused severe damage to fruit crops, especially in the stone fruit areas of the Interior. In contrast, the area south of Kelowna to the United States boundary experienced the heaviest apple crop in its history. The situation which developed made it extremely difficult to estimate the demand for orchard labour, and estimates had constantly to be revised. From the middle of August until the end of October, the Farm Labour service experienced what was probably the most difficult season since its inception.

The publicity which the winter damage to crops received had the effect of deterring helpers who normally move each year from other parts of British Columbia and other provinces to the Okanagan, and local persons depending upon the fruit industry for summer and autumn employment sought work elsewhere. At the same time, shortages of able-bodied men were occurring

in construction work, logging camps and sawmills. Only by continuous advertising and by exploring every source of labour supply was it possible to meet the situation that developed.

During the past seven years, Mr. MacGillivray said, there has been a marked improvement in the accommodation provided for orchard workers in the Okanagan, and for berry pickers in the Fraser valley. While the situation is not easy of solution, he said, there must be still further improvement if the best class of worker is to be attracted and retained.

Fewer placements of farm and ranch workers in 1950 is attributed in part to the number of Dutch immigrants who have been established on many of the dairy farms and who have remained, giving very satisfactory service.

The number of displaced persons or families moving to farms in 1950 was not great. With some outstanding exceptions, this type of labour has not generally "given too much satisfaction," it was reported.

United States.—Mr. D. W. Fessenden, of the Bureau of Employment Security, Washington, D.C., described a parallel situation existing in the United States. He anticipated that with the increased industrial activity there will be a considerable shifting of agricultural workers into industry which means, as far as agricultural labour demands are concerned next spring, looking to extraordinary measures to meet these requirements.

Federal-Provincial Agreements and Program for 1951

The advisability of renewing the Federal-Provincial Farm Labour Agreements for 1951-52 was discussed, and their renewal was recommended.

The chairman stated that an interdepartmental committee on farm labour had estimated that from 15,000 to 20,000 farm workers would be required to meet farm labour demands in 1951. While some of these workers can be obtained in Canada, he said, it will also be necessary to recruit workers in other countries. He stated that a number of displaced persons can be made available, and immigrants will be brought in from Holland, Italy, Denmark and other European countries.

Questioned as to the possibility of procuring farm workers from the United Kingdom, Dr. Darke, Agricultural Adviser to the U.K. High Commissioner, said that while a small number might emigrate from the United Kingdom to Canada, Canadian farms could not expect to have their requirements met from this source.

It was the consensus of opinion that about 3,000 displaced persons would be required in 1951, in addition to those brought in for sugar beet employment.

The Chairman pointed out that in recent years it had been possible to have displaced persons brought to Canada under an arrangement whereby ocean transportation was supplied by the International Refugee Organization. The International Refugee Organization, however, would cease its operations in October next, and the flow of displaced persons to this country would come to an end at that time. He said that while it may be possible to obtain immigrant farm workers from other sources, it would be necessary to develop some method whereby transportation difficulties could be overcome.

Mr. H. Allard, of the International Refugee Organization, stated that if displaced persons are likely to be required in 1951, the Organization should be advised as soon as possible of the number likely to be required so that selection might be proceeded with immediately. A number of displaced persons, he explained, are not living in camps but are employed with German farmers. In order that these people may be interviewed and processed for movement to Canada next Spring, and to ensure that only the best types of workers are sent forward, the IRO and Canadian selection officers should be given as much time as possible in which to complete the job of selection.

In regard to interprovincial movements of labour, the chairman recommended that the provinces first explore the possibility of securing workers within provincial boundaries before requesting interprovincial movements, and that wherever possible the cost of intraprovincial transportation should be borne by the workers themselves. The delegates were promised that in future interprovincial movements greater care would be exercised in the selection of workers. At the same time, it was suggested that the provinces should be specific in stating their requirements.

A continuation of international movements of workers was favoured.

Some Aspects of Recent Manpower Developments

Before the close of the convention Dr. G. V. Haythorne, Director, Economics and Research, Department of Labour, and Dr. J. F. Booth, of the Department of Agriculture, outlined some of the factors contributing to the high level of economy, and surveyed the present employment situation and probable future requirements and sources of manpower supply.

International Labour Organization

ILO PETROLEUM COMMITTEE STUDIES HOUSING, HEALTH AND EDUCATION

Housing and social services in the world petroleum industry were the major subjects dealt with by the ILO Petroleum Committee at its third session. The Committee approved minimum housing standards for oil workers. It also recommended the provision of medical services, with particular reference to the problems of remote areas. It urged the development of educational opportunities for the children of oil workers, and the encouragement of adult education in areas where illiteracy persists.

The Petroleum Industries Committee of the International Labour Organization held its Third Session at Geneva, Switzerland, from October 24 to November 3, 1950, and after discussion approved a series of resolutions concerning problems of the Petroleum Industry. This Committee is one of the eight ILO Industrial Committees at whose sessions representatives of workers, employers and governments from the industrial nations concerned meet every two years to consider current developments and problems, and to plan goals for improvement of their industries.

Organization of the Committee

At this Session, 72 delegates, 4 substitutes and 34 advisers, a total of 110 representatives from 14 countries, met under the chairmanship of Mr. E. R. Stafforini, Government member from the Argentine. The Committee elected as Vice-Chairman Mr. G. T. Sinn of the United States, representing the Workers' group, and Mr. J. Mejia of Colombia, representing the Employers' group.

The 14 countries represented at the meeting were: the Argentine Republic, Burma, Canada, Colombia, Egypt, France, Iran, Iraq, Mexico, the Netherlands, Peru, the United Kingdom, the United States of America and Venezuela. Observers were present from the United Nations, the World Health Organization, the United Nations Educational, Scientific and Cultural Organization, the International Confederation of Free Trade Unions, the International Federation of Christian Factory and Transport Workers, and the Governments of Brazil and Indonesia.

The Canadian delegation consisted of:—

Government Delegates.—Mr. C. T. Richard, M.P., Bathurst, N.B.; Mr. R. H. Hooper, Industrial Relations Officer, Department of Labour, Winnipeg, Manitoba.

Employers' Delegates.—Mr. W. Yalden-Thomson, Labour Relations and Research Division, Imperial Oil Limited, Toronto, Ontario; Mr. A. G. Cockrill, Manager, Anglo-Canadian Oil Company, Brandon, Manitoba.

Workers' Delegates.—Mr. Gordon Fisher, Oil Workers' International Union (CCL), Lakeview, Ontario; Mr. Marcel Francq, Canadian Representative, International Chemical Workers' Union (AFL), Montreal, P.Q.

Agenda

The agenda for the Third Session of the Committee, as determined by the Governing Body of the ILO, covered the following items, on which reports had been prepared by the International Labour Office:—

1. General Report, dealing particularly with:
   (*a*) Action taken in the various countries in the light of the conclusions of the Second Session;
   (*b*) Steps taken by the Office to follow up the studies and enquiries proposed by the Committee;
   (*c*) Recent events and developments in the industry.
2. Social conditions in the petroleum industry, with special reference to housing and social services. Under the heading of social services the report on social conditions covers such questions as medical services, education, shopping facilities, sports and recreation, and transport services.

76446—3

Procedure

In opening the first plenary sitting, the Secretary-General, Mr. Luis Alvarado, Assistant Director-General of the ILO, welcomed the delegates and pointed out that two new oil-producing countries, Argentina and Burma, had joined the Committee since the previous session. He also outlined the work of the International Labour Office with regard to the Petroleum Industry since the last session of the Committee in 1948.

Mr. Stafforini, the Chairman, outlined past achievements of the Committee and the necessity of supporting ILO programs in the fields of manpower and productivity. Messrs. Shaw and Ibanez, representing the Employers' and Workers' groups of the Governing Body respectively, also welcomed the delegates and expressed hopes for a most successful meeting.

At the second plenary sitting, Mr. Yalden-Thomson of Canada, who had been elected Chairman of the Employers' group summarized the progress of the world petroleum industry and its prospects for the future, in opening discussion on the General Report. He was followed by Mr. Riley, United States Government delegate, and Mr. Nicholas, United Kingdom Workers' delegate. In the course of the discussion, it was pointed out that only the United Kingdom and Canada had answered fully the questionnaires sent out by the Office in preparation for this Session of the Committee, and it was decided subsequently to ask the Governing Body to reconsider the steps needed to ensure that information from member nations was made available in good time for future sessions.

At the third plenary sitting, the Committee adopted the recommendation of the Steering Committee to set up three Subcommittees on Housing, Health Services and Education. While these Subcommittees were considering these subjects (see below), the plenary sitting proceeded with consideration of the General Report on action taken in the light of resolutions of previous sessions, and recent developments in the petroleum industry.

Delegates representing the employers, workers and governments of various members presented information on the industry in their own countries. This was followed by a general discussion on social conditions in the Petroleum Industry.

Oil Industry in Iran

At the eighth plenary sitting the delegates began consideration of a report prepared by the Mission sent by the Governing Body of the ILO to Iran early in 1950 at the invitation of the Iranian Government. This resulted from an attack made by an Iranian Workers' delegate at the Second Session of the Petroleum Committee in 1948 upon the position of workers in the service of the Anglo-Iranian Oil Company. The Report prepared by the Mission contained an objective picture of social conditions among Iranian oil workers, together with certain recommendations for the consideration of the Iranian Government.

It reported that, in general, relations between the company and the workers, though not completely harmonious, appeared to be "developing on the right lines." Working conditions, it said, appeared to be generally acceptable to the workers. On the other hand, it found that oil workers working for contractors were "not so well protected as the company's employees, principally because the legal provisions are not so strictly applied."

It listed 26 subjects which it said "might well receive further attention" from the Iranian Government, the Anglo-Iranian Oil Company, and the oil workers. These subjects included: the acceleration of the company's housing program, organization of co-operative societies among the workers, extension of the company's medical services, provision of a larger number of schools, promotion of trade union unity among the oil workers, assistance to oil workers' unions by the unions in other countries, strengthening of the Iranian Ministry of Labour, and improvements in the Labour Law.

Mr. Hooper, a Canadian Government delegate, suggested that the Iranian Government and Employers' delegates should be given an opportunity, during discussion of the Report, to speak on the charges of the Iranian Workers' delegate at the last Session, and that the Iranian Workers' delegates should have an opportunity to present their case in the light of the findings in the Report. This course of action was followed at the sittings.

Out of the discussion on conditions in the Iranian Petroleum Industry came an offer by the Iranian Employers' delegates, after consultation with British and Iranian Workers' delegates, to finance the trip of a group of representative Iranian oil workers to Britain, in order that they might study British trade union principles at first hand. The British Workers' delegates gave assurances that the British labour movement would look after the Iranian workers while in Britain, in the interests of promoting trade union unity in Iran.

Housing

The Subcommittee on Housing elected as one Vice-Chairman, Mr. Gordon Fisher, Workers' delegate from Canada. The Subcommittee had before it for consideration Chapter 2, Report II: "Social Conditions in the Petroleum Industry," and the members exchanged information on the housing conditions in the Petroleum Industry of their respective countries. Mr. Yalden-Thomson, Employers' member for Canada, said that in Canada it was not considered that the employers had responsibilities for their workers when they were away from the plant. Public authorities laid down standards for houses, but the individual was free to choose where he lived, he said.

Six draft resolutions were put before the Subcommittee, and a Drafting Committee prepared a resolution taking into account these draft proposals. Mr. Fisher, Workers' member for Canada, was also elected to the Drafting Committee. The conclusions reached by the Committee were incorporated in a Report which was adopted unanimously, and in a resolution adopted by 67 votes to nil, with one abstention.

The resolution dealt with the following matters:—

Minimum Housing Standards.—The resolution urged that the minimum standards which should be applied for the permanent housing of petroleum workers in an area—to ensure a reasonable level of decency, hygiene and comfort—should be subject to approval by the public authorities in the light of their general housing policy and of the local conditions. Any suggestions made by workers or employers should be taken into account. The points suitable for consideration according to the local circumstances included the following: (*a*) the most suitable kind of construction material to be used; (*b*) the suitability of the layout of the housing units for the climatic conditions; (*c*) protection against disease-carrying insects; (*d*) minimum size of accommodation, its ventilation and the layout of the ground space; (*e*) the provision of drinking water, basic cooking installations, washing facilities and sanitation, including communal arrangements in any of these matters; (*f*) the provision of lighting, preferably by electricity.

Rental and Service Charges.—The same resolution also pointed out that having regard to the practice and customs in other permanent settlements in the community, and in order to avoid differentiating the petroleum workers from other members of the community in the matter of housing, a rental for housing and a charge for such services as lighting should be payable, unless it was provided by law, collective agreement or otherwise that the workers should pay no rent.

Housing Developments.—The same resolution stated that where petroleum workers have been provided with permanent housing apart from the rest of the community, the employers and public authorities, in so far as local circumstances permitted, should consult as to any steps that might be feasible and appropriate to bring about the eventual integration of the petroleum workers with the surrounding or adjacent community. In future cases where an employer establishes an oilfield or a refinery, and finds it necessary to undertake permanent housing developments for his regular workers in connection therewith, consideration should be given, in consultation between the employer and the public authorities, to the means whereby the siting and servicing of such housing can best contribute, through co-operative efforts on the part of the public authorities, the employer and other private interests, to the development of the local community. Thus the petroleum workers shall not be separated from the rest of the community but shall be integrated in it so that the whole community will enjoy the same privileges and responsibilities.

Implementation.—The resolution also stated that in so far as the housing of petroleum workers engaged in established production or refining operations was not covered by legislation or concession agreements, or was not dealt with adequately in practice in any other way, it was agreed by the Governments, employers and workers that the problem required the co-operation of Governments, employers and workers in making every effort (each in so far as he or they may be able) to ensure that housing was made available for petroleum workers as expeditiously as circumstances might permit. One of the preliminary steps in this matter might be to make surveys to ascertain the need for housing of petroleum workers.

Health Services

The Subcommittee had a general exchange of views on Health Services in the Petroleum Industry and discussed two draft statements submitted by members. Mr. Hooper, a Government member from Canada, was elected to the Drafting Committee which drew up three resolutions, concerning Occupational Diseases, Preventive Medicine and Health Services, all of which were adopted unanimously:—

Occupational Diseases.—The resolution concerning occupational diseases urged the

76446—3½

Governing Body of the ILO to instruct the Office (*a*) to obtain—in collaboration, where appropriate, with other competent bodies—the information necessary for a study of occupational diseases in the petroleum industry and (*b*) to report to Governments as soon as possible the results of this study.

Preventive Medicine.—The resolution concerning preventive medicine invited the Governing Body to suggest to the Governments of States concerned, and through them to their health services, to private or public health or research institutions there operating, and to the petroleum companies operating in the country, that close and continuing consultation and effective co-operation be practised between them at all levels for the study, localization, prevention and combating of regionally prevalent diseases and the improvement of public health conditions in every practicable manner.

Health Services.—The resolution concerning health services recommended that medical services for workers and the whole of the community should be provided by public authorities or other agencies and the petroleum companies, to an extent determined by common agreement between them. Such services should be organized in such a way as to be adequate and in proportion to the number of beneficiaries. The resolution also urged that hospitals, clinics or dispensaries be set up in remote petroleum centres, if the size of the centre should warrant it; the services should be maintained by competent and adequate personnel. The resolution further pointed out that the equipment of consulting rooms should be such as to safeguard the private character of medical examinations.

Education

This Subcommittee began its work by discussing the general problems of education of oil workers and of the children of oil workers. It was generally agreed that, where the oil industry is located in communities with organized public services, oil workers' children have access to community educational facilities. On the other hand, where the oil industry is located in remote or unsettled areas, the problem of organizing school facilities is sometimes most acute, and the oil companies in such case should co-operate with governments to provide school services.

The conclusions reached by the Subcommittee were incorporated in a report, a memorandum on education and a resolution concerning general basic education, all of which were unanimously adopted:—

Elementary and Secondary Education.—The memorandum recommended that elementary education be made available to the children of the workers. It also recommended that facilities for secondary education be made available so that the children capable of benefiting by such facilities should not be obliged to leave the area to obtain them. It would be advisable for the responsible parties to keep this problem prominently before them with a view to the provision of the necessary facilities in all areas in which the need arises.

School Premises.—The memorandum also urged that when permanent school premises are provided, they should be designed to accommodate children in the numbers compatible with the requirements of adequate education, and in planning the premises due regard should be given to good lighting, heating, ventilation and sanitary facilities. The schools should wherever possible be sited in the neighbourhood of a plot of land suitable for development as a playground for the children. The question as to whether separate classrooms should be provided for boys and girls should be decided in the light of local custom.

School Equipment.—Appropriate school equipment should be provided, and suitable text books made available in adequate quantities for all pupils.

Adult Education.—In order to provide more adult education facilities by organizing evening classes and other courses, the petroleum companies, especially in areas where there is a high degree of illiteracy, are encouraged to collaborate with other responsible parties in the prosecution of such aims, it being recognized that the elimination of illiteracy will enable the petroleum workers to qualify the better to serve their own interests and those of the community, as well as the interests of the petroleum companies.

Nutrition in Schools.—The fact being recognized that attendance at school provides a valuable opportunity to supplement the diet of children, where this is needed to ensure their growth into healthy adults, it is recommended that petroleum workers' children should be provided in the schools with such elements of supplementary diet as are considered necessary.

School Health Services.—To the extent that health services exist in the area, a school health service should be provided

for the children of the petroleum workers, it being recognized that this will contribute greatly to the building up of a healthy community.

Teaching Personnel.—In areas where oil operations have become established and show signs of steady growth, the Government of the country should be invited to give attention to the needs for teaching personnel for the schools which will grow up therein and to make due provision in its teacher-training programs for these needs. The petroleum companies are urged to assist where necessary in attracting, especially to remote areas, teaching personnel for the children of petroleum workers by helping them to settle satisfactorily in their new environment, providing them where necessary and possible, with accommodation and extending to them the social amenities provided for the companies' own workers.

Scholarships.—As it is to the advantage of the individual, the community and the industry itself for gifted workers and the gifted children of workers, without discrimination as to the position of the worker, to receive a higher education, it is recommended to Governments and to the oil companies that programs (including scholarships, etc.) should be carried through with a view to the above-mentioned advantages.

Minimum Standards of Basic Education.—Having recalled resolutions concerning general basic education adopted by the Committee at its First and Second Sessions, the resolution concerning general basic education urged that if in remote or less developed areas, or in other areas, education was provided by non-governmental institutions, the State, or its agencies, must determine, supervise and control the minimum standards of basic education of the petroleum workers and their children.

Other Resolutions

Resolutions concerning the following matters were adopted unanimously by the Committee, except the resolution concerning hours of work:—

Wages in the Petroleum Industry.—This resolution invited the Governing Body of the ILO to instruct the Office to study the principles and methods used in determining wages in the petroleum industry in the various countries concerned. It also requested the Governing Body to consider the inclusion of this item on the agenda of the Fourth Session of the Petroleum Committee.

Social Problems.—This resolution invited the Governing Body of the ILO to instruct the Office to continue its studies of the social problems of the petroleum industry, with special reference to social services such as supply schemes, the transport of workers, recreation facilities, and co-operative societies. It also requested the Governing Body to consider the inclusion of these items on the agenda of the Fourth Session of the Petroleum Committee.

Relations Between the Chemical Industries Committee and the Petroleum Committee.—This resolution invited the Governing Body of the ILO to instruct the Office to convey to the Petroleum Committee any conclusions adopted by the Chemical Industries Committee on subjects of concern to both industries in order that the Petroleum Committee might have an opportunity to make its observations on them. Such observations would be forwarded to States Members in the same way as the conclusions of the Chemical Industries Committee.

Supply of Information Regarding the Petroleum Industry to the International Labour Office.—This resolution invited the Governing Body of the ILO to reconsider the steps to be taken to ensure that information needed from the several States Members should be available to the Petroleum Committee prior to each session, including information as to the extent to which action has been taken arising out of resolutions adopted by previous sessions of the Petroleum Committee.

Hours of Work.—The resolution concerning hours of work in the petroleum industry was submitted by the Workers' group and was adopted by 34 votes to 25, with 12 abstentions. This resolution, having recalled the resolution concerning hours of work adopted at the Second Session of the Committee, invited the Governing Body of the ILO to place the question of hours of work on the agenda of the Fourth Session of the Petroleum Committee and to request the Office to make a preliminary study of the problem.

Closing of the Session

The work of the Third Session of the Petroleum Committee was officially closed at the Committee's tenth plenary sitting on Friday, November 3, 1950. The Government delegate of Mexico extended, on behalf of his Government, an invitation to the Petroleum Committee to hold its Fourth Session in Mexico, two years hence.

GOVERNING BODY MEETS AT BRUSSELS

The progress of the ILO in giving technical aid to underdeveloped countries on labour questions was among the more important matters discussed at the 113th Session of the Governing Body.

The Governing Body also made arrangements for a series of future ILO meetings, reviewed the accomplishments of various of its committees, and made plans for the future work of the Organization in certain fields.

The meeting was held at Brussels from November 21 to 25. Mr. Paul Goulet, Director of the ILO Branch, Department of Labour, attended as substitute for Mr. Arthur MacNamara, Deputy Minister of Labour, the Canadian Government representative on the Governing Body. Mr. Goulet was accompanied by Mr. Norman Berlis, Department of External Affairs, who is Secretary to the Canadian Permanent Delegation in Geneva. Mr. Percy R. Bengough, President of the Trades and Labour Congress of Canada, was also present as a deputy member of the Workers' group.

Technical Assistance

In approving the report of its technical assistance committee the Governing Body reiterated the willingness of the ILO to co-operate fully in the general United Nations technical assistance program.

This program has now entered the active phase. Requests for technical assistance have been received by the ILO from a number of countries in Asia, the Near and Middle East, and Latin America. In response to these requests a number of missions have been undertaken, and plans for others have been drawn up.

ILO Committee on Trade Union Rights

The Governing Body was informed that the United Nations has transmitted to ILO Director-General David A. Morse a number of complaints from trade unions alleging the infringement of trade union rights.

The complaints concern member countries of the ILO. The number of complaints received and the countries involved were not disclosed.

It was agreed by the Governing Body that the complaints should be given preliminary examination by the officers of the Governing Body.

The complaints were transmitted by the United Nations under the procedure the two organizations have agreed upon to govern the operations of the ILO's new Fact-Finding and Conciliation Commission on Freedom of Association (L.G., May, 1950, p. 667).

Under this procedure any complaint that is received is first examined by the officers of the Governing Body. If the officers agree that a complaint warrants circulation to the Governing Body as a whole, this is done, and it is then open to any member of the Governing Body to propose that the matter be referred to the Fact-Finding and Conciliation Commission.

Establishment of the Commission was approved by the General Conference of the ILO in June.

Human Rights

The Governing Body authorized the ILO to co-operate with the Commission on Human Rights and other UN agencies in the preparation of draft articles on economic and social rights for inclusion in the proposed UN Covenant on Human Rights.

Work of ILO Bodies

The Governing Body approved arrangements for a fifth Regional Conference of American member countries of the ILO, to be held in Colombia in 1952. The fourth American regional conference was held in Montevideo in April-May, 1949 (L.G., Dec., 1949, p. 1531).

A program of future meetings was approved (see page 181).

Other meetings, to be held later, include those of the Correspondence Committee on Hygiene, the Metal Trades Committee (fourth session), the Iron and Steel Committee (fourth session), and the Advisory Committee on Salaried Employees and Professional Workers (second session).

Tribute to Hon. Humphrey Mitchell

The death last summer of the Hon. Humphrey Mitchell, Canadian Minister of Labour, was brought to the attention of the Governing Body in an obituary notice prepared by the ILO. It was stated that the ILO owed especial gratitude to Mr. Mitchell, "not only as the President of a session of the Conference that dealt with a number of important constitutional questions, but also as a member of the Government whose hospitality the Office enjoyed when its working centre was in Montreal."

Program of ILO Meetings

Date	Meeting	Place
26 Dec.-2 Jan.	Asian Technical Conference on Co-operation	Karachi, Pakistan
16-27 Jan.	Committee of Experts on Indigenous Labour (First Session)	La Paz, Bolivia
12-23 Feb.	Building, Civil Engineering and Public Works Committee (Third Session)	Geneva
26 Feb.-10 Mar.	Governing Body and Committees (114th Session)	Geneva
27 Mar.-6 Apr.	Committee of Experts on the Application of Conventions and Recommendations	Geneva
9-21 Apr.	Regional Conference for the Near and Middle East	Teheran
10-20 Apr.	Meeting of Experts on Payment by Results	Geneva
7-9 May	Coal Mines Committee (Fourth Session)	Geneva
21-26 May	Joint Maritime Commission (16th Session)	Geneva
6 June	International Labour Conference (34th Session)	Geneva
2-6 July	Meeting of Experts on Status and Conditions of Employment of Domestic Workers	Geneva

CONVENTIONS OF PROVINCIAL LABOUR ORGANIZATIONS

Resolutions asking for continuation of rent controls, price controls, improved workmen's compensation legislation and revised provincial labour codes were among those passed at recent meetings of provincial labour organizations. Summarized below are proceedings of meetings of the New Brunswick Council of Labour (CCL), the Newfoundland Federation of Labour (TLC), and the Ontario Provincial Federation of the Trades and Labour Congress of Canada.

New Brunswick Council of Labour (CCL)

The fifth annual meeting of the New Brunswick Council of Labour was held in Saint John, New Brunswick, December 1 and 2. More than fifty delegates attended the conference which was presided over by President Angus MacLeod of Saint John.

The convention delegates were welcomed to Saint John by Deputy Mayor Tripett. Other speakers and guests at the opening sessions included Hon. S. E. Mooers, New Brunswick Minister of Labour; N. D. Cochrane, Deputy Minister of Labour, Miller Dick, New Glasgow, Maritime representative of the United Steelworkers of America; Romeo Mathieu, Montreal, international representative of the United Packinghouse Workers: John Toner, Fredericton, conciliation officer of the New Brunswick Department of Labour. Several representatives of the National Employment Service also attended the meetings.

In his presidential address, Mr. MacLeod stated that the prime concern of the convention was the unemployment situation in New Brunswick. He said that the convention served as a means of bringing together representatives of all affiliated unions to discuss common problems, and to formulate some program for the solution of these problems which would be submitted to the Provincial Government. He expressed the fear that there would be increasing unemployment in the province this winter. He felt that the discontinuance by the Federal Government of all works projects not definitely connected with defence would affect New Brunswick more than any other province.

Mr. MacLeod stressed the need for new industries. He said that while the province contained only 2·8 per cent of Canada's labour force, it had 6 per cent

of the unemployed. He also said that New Brunswick had the second lowest average wage rate in the country.

Mr. MacLeod asked the convention to record its disapproval of the removal of federal rent controls, and urged a program of low-cost housing construction for the province.

He said that organized labour would have to continue its program of demanding improvements in the provincial Workmen's Compensation Act as well as in all other fields of social legislation. Of particular interest in this field were increased old age pensions the speaker said.

While he felt that progress in the social field had been slow, Mr. MacLeod said "we dare not become disheartened but as organized labour we must accept the responsibility in striving to make this province and nation a better place for this and future generations to live in."

Resolutions

The convention adopted several resolutions on matters of importance to labour in the province. Included among these were:—

A resolution asking all members of the Canadian Congress of Labour in Saint John to patronize the laundry employing union labour;

A request that the Provincial Government draw up wage schedules under the Industrial Standards Act covering the erection of structural steel in the province;

A recommendation that the Workmen's Compensation Act be amended to provide for payment for drugs and prescriptions ordered by a doctor for a workman on compensation;

A demand that representatives of the Canadian Congress of Labour be appointed to the Court of Referees of the National Employment Service;

A resolution asking that the Provincial Government be petitioned to increase the average workmen's earnings to 75 per cent, and that maximum earnings be increased from $2,500 to $3,000, for purposes of the Workmen's Compensation Act. This action was asked because both the provinces of Ontario and Saskatchewan had taken similar action. At present, in New Brunswick, the Act calls for only 66⅔ per cent of the workmen's average earnings the maximum yearly earnings being $2,500.

Newfoundland Federation of Labour (TLC)

The fourteenth annual convention of the Newfoundland Federation of Labour was held in Grand Falls recently. Some sixty delegates representing thirty Newfoundland unions attended the convention. The opening session, which featured many guest speakers, was under the Chairmanship of Arthur Rowe, Vice-President of the Federation.

Speakers on the opening program included Hon. H. L. Pottle, Ph.D., Minister of Public Welfare, who represented the Premier of Newfoundland, Hon. Charles H. Ballam, Minister of Labour, Hon. E. S. Spencer, Minister of Public Works, and Hon. W. J. Keough, Minister of Fisheries and Co-operatives.

On the program also were Mr. Philip Gruchy, C.B.E., General Manager of the Anglo-Newfoundland Development Company, Magistrate B. J. Abbott, Mr. A. G. Duggan, M.B.E., Honorary President of the Newfoundland Federation of Labour, Mr. Baxter Morgan, M.H.A., of the Avalon Co-operative Council, and Mr. W. T. Howell, Superintendent of Town Services, who welcomed the delegation to Grand Falls.

The Convention handled a heavy agenda composed of the Officers' Reports, Reports of Standing Committees, Resolutions and Amendments to the Constitution.

The Officers' Reports, which gave a complete and concise account of the activities of the Executive Council in the Legislative, Educational and Organizing fields for the year, received the endorsation of the Convention.

The financial statement presented by Treasurer J. F. Ryan showed the Federation to be in a fair financial position and indicated that it had been necessary to economize in many respects because of the reduction in per capita tax payments resulting from the transfer of many organizations to the International set-up.

Reports of Standing Committees included those of the labour representatives J. F. Ryan and W. T. Pike, of the Court of Referees, Unemployment Insurance Commission, the Legislative Committee, and the delegates to the Trades and Labour Congress of Canada Convention and the Newfoundland Co-operative Conference.

The Legislative Committee presented a draft Apprenticeship Act which was approved by the Convention and ordered to be submitted to the Government. It is hoped that the proposed Apprenticeship Act will materially assist the Government's plans for Vocational Education in Newfoundland.

The Convention adopted twelve of fourteen proposed amendments to the Constitution. The adopted amendments dealt mainly with technical changes necessary to bring the Federation's Constitution into line with the requirements of the Trades and Labour Congress of Canada Constitution. The rejected amendments proposed reduction in affiliation fees and per capita tax from central bodies.

The Committee on Constitution and Law also submitted a resolution calling for a change in the Platform of Principles of the Trades and Labour Congress of Canada. The resolution was adopted and forwarded to Congress headquarters.

Resolutions

Twenty resolutions were considered by the delegates, nineteen of which were concurred in.

The resolutions called for concerted action on such matters as the retention of certain raw materials in the province so that they might be further processed locally before export; the elimination of two contentious sections from the Labour Relations and Trade Union Acts; clarification of the status of the Newfoundland Hotel and its employees; the completion of a highroad between Buchans and Badger; a low-cost housing program for wage-earners; and the speedy publication of the report of the Commission of Enquiry into the Cost of Living.

The Convention unanimously endorsed resolutions opposing: the imposition of the 3 per cent sales tax; the Government's proposition to extend the time limit for construction of the Newfoundland portion of the Trans-Canada Highway and the suggestion that the road would be of a secondary nature; and the imposition of any further taxes, Federal or Provincial, on cigarettes and tobacco.

Resolutions were passed supporting: a Government grant for workers' education; the formation of co-operative credit unions within the ranks of trade unions; and a policy of buying Newfoundland union-made goods first. Immediate Government action was asked to offset the probable disruption of the community of Bishop's Falls by the impending shutdown of the pulp mill there in 1953.

The following Officers were elected for the ensuing year. President, W. Frank Chafe; First Vice-President, Norman Munn; Second Vice-President, Arthur Rowe; Third Vice-President, Baxter Fudge; Fourth Vice-President, Violet M. Pynn; Secretary, W. J. May; and Treasurer, C. W. Strong.

Ontario Provincial Federation of the Trades and Labour Congress of Canada

The fifth annual convention of the Ontario Provincial Federation of the Trades and Labour Congress of Canada was held in Toronto from January 12 to 14. Over 365 delegates representing 147 organizations took part in the three-day deliberations. The Credentials committee refused to seat three delegates who, following investigation, were believed to have communist leanings. The delegates dealt with over 100 resolutions on a wide variety of subjects of interest to the Federation, particularly in the field of provincial labour legislation.

Among the speakers who addressed the convention were the Hon. Leslie Frost, Premier of Ontario; Robert H. Saunders, Chairman of the Ontario Hydro Commission; C. J. Cameron, of the Ontario Workmen's Compensation Board; George V. Haythorne, Director of Economics and Research, Federal Department of Labour; Gordon Milling, Executive Secretary, Joint Labour Committee to Combat Racial Intolerance; Gordon G. Cushing, General Secretary-Treasurer of the Trades and Labour Congress; and W. S. Stanbury, National Commissioner of the Canadian Red Cross.

The delegates were welcomed to Toronto by William Jenoves, president of the Toronto and District Trades and Labour Council, and vice-president of the Trades and Labour Congress of Canada. In his brief remarks, Mr. Jenoves spoke of the current joint labour campaign to have price controls reimposed. He complimented the railway organizations on successful conduct of their recent dispute. Speaking on the legislative achievements of labour in the past year, Mr. Jenoves said that gains in this field had not been as spectacular as in wages and other matters, but paid tribute to the report of the Roach Commission on Workmen's Compensation. While he felt the report could have gone further, Mr. Jenoves expressed the hope that the Ontario legislature would see fit to accept the Report's recommendations.

Federation president A. F. MacArthur noted the progress made by the organization in the past year, and said that the

delegates present represented some 200,000 workers. Restating the aims of the Federation, he said that its chief goal was the protection and advancement of the economic, social and educational interests of labour.

Referring to present world conditions, and the need for a program of preparedness, Mr. MacArthur said that there were "grim days ahead particularly for labour." He said that the value of the dollar was decreasing because of inflation and that labour as the most important segment of the community must be consulted on all matters of importance in the economy.

In condemning those he described as deluded and misguided people who attempted to infiltrate the trade union movement to further the beliefs of Communism. Mr. MacArthur said he felt safe in saying that the Ontario Federation was 99 per cent free of communists. However, he warned delegates to guard against Communist infiltration at all times.

In addition to the regular Convention Committees, two special committees were established. One committee was to look into the report of the Roach Commission on Workmen's Compensation, and the other was to study the Provincial Labour Code.

Credentials Committee

The Credentials Committee refused admission to three delegates, who, in their opinion, had shown Communist leanings. The Committee reported that they had interviewed these delegates, and that the evidence presented against them was in the committee's opinion sufficient to warrant exclusion from the Convention. The Committee's recommendation received almost unanimous support from the delegates when a vote was called for.

The action of the Convention was in line with the policy of the Trades and Labour Congress of Canada as laid down at its Montreal Convention in September. In addition to barring the three delegates, the Convention amended its Constitution to bring it in line with the TLC on the matter of representation at Conventions (L.G., Nov., 1950, p. 1801). An amendment was also passed which required all nominees for office to take an oath declaring themselves to be free of any affiliation with any organization or group "which expounds or promotes or encourages any doctrine or philosophy contrary or subversive to the fundamental principles of the democratic form of government of Canada. . . ." This amendment is also patterned after a similar section of the TLC constitution.

Controls and Subsidies

There was considerable discussion by the delegates on the matter of controls and subsidies and the high cost of living. Resolutions were passed asking for maintenance by the Federal Government of its rent control regulations, and failing this a strong demand by the Federation that the Ontario Provincial Government assume control of rents.

Another resolution asked for the establishment of subsidies on essential foods, and the imposition of a 100 per cent excess profits tax.

Labour Relations

In the field of labour relations, the Convention's primary interest was in the amending of the Ontario Labour Relations Act, 1948. Several resolutions incorporated into one asked for revision of the Act to provide for:—

deletion of the revocation of certification provision;

a clear definition of company unions, and elimination of such unions from "any and all forms of certification;"

the right to apply for certification and have a vote taken when 25 per cent of the employees in the proposed bargaining unit authorize "a *bona fide* union" to do so;

a clause to state that fifty-one per cent of those voting should decide certification rather than the present clear majority;

an amendment to allow the issue of a union shop and compulsory check-off of union dues to be decided by a simple majority vote;

closer supervision of "unfair practices" during a dispute;

automatic grievance procedure to go into effect when certification is granted in order "to cover the period of early negotiation." This part of the resolution went on to state that "the form of union security secured by negotiation should remain in force until changed by mutual consent of the parties concerned."

The resolution also requested that the Ontario Labour Relations Board be given "an adequate staff of administrators" to speed up procedure and quicken application of the provisions of the Act. Another section of the resolution asked for full coverage of employees of municipal corporations, their boards and commissions, by the Act. Insertion of special provisions in the Act was also recommended for the

building trades and other groups of workers who worked "under similar fluctuating conditions."

Social Security and Health

The Convention approved several resolutions on health and social security. One asked that the Ontario Government promote the building of more convalescent hospitals and rest homes; another urged higher grants by the Province to the hospitals. A third resolution asked for establishment of more adequate facilities to handle mental cases.

The Convention called for "speedy action" by provincial authorities in establishing a satisfactory contributory scheme of health insurance in co-operation with the Federal Government.

Following the lead of the Trades and Labour Congress of Canada, at its annual convention in Montreal, the Ontario Federation adopted a resolution recommending that the Old Age Pension Act be amended to conform to the TLC requests (L.G., Nov., 1950, p. 1804). This resolution also suggested that "provision be made for a condition wherein, after twenty years' service in a particular industry, a worker is unable to continue in that industry at his regular work, then the said industry shall be required to provide an adequate pension or suitable employment for the worker until such time as he is eligible for old age pensions under the normal operation of the Act." Another resolution requested the Ontario Government to increase Mother's Allowances "by at least 25 per cent."

Workmen's Compensation

The special committee set up to study the report of the Royal Commission on Workmen's Compensation in Ontario (Roach Commission), reported favourably to the Convention. The Commission report was described as being progressive, and generally favourable to labour's point of view. However, the Committee felt that the $200 recommended in the Report for burial expenses was not adequate. The committee also felt that disabled workers were entitled to 100 per cent compensation based on their full earnings. At present the law provides for compensation based on 75 per cent of earnings.

The Committee said also that present provisions for the rehabilitation of injured workers were inadequate and recommended that measures be taken to increase facilities for finding suitable re-employment for these injured workers. It also registered opposition to what it called the forcing of injured workmen to take unsuitable and unsatisfactory employment following injury. The Committee strongly urged that the Ontario Legislature adopt the recommendations of the Royal Commission at its next session.

Several resolutions on Workmen's Compensation were passed following recommendation by the special committee. These resolutions closely followed the Committee's own recommendations.

Other Resolutions

Among the subjects dealt with in other resolutions were the increasing price of milk, apprentice training and the operation of the Apprenticeship Act, highways, hours of work and vacations with pay, hydro, licences, provincial resources and taxation.

Election of Officers

A. F. MacArthur was re-elected Federation President by a substantial majority over Gordon Smith of Toronto. Secretary-Treasurer Hugh J. Sedgwick was re-elected by acclamation. Vice-Presidents elected for the coming year were: H. J. Green, W. Godfrey, and George Beadle.

The 1951 Convention will be held in Hamilton.

76446—4½

Industrial Relations and Conciliation

The Award of the Arbitrator under The Maintenance of Railway Operation Act, made during December, assured non-operating employees of the Railways the introduction of the five-day forty-hour week on June 1, 1951, and a further wage increase of three cents per hour effective from September 1, 1950, under a two-year contract. ¶The Canada Labour Relations Board recently revoked an order of certification granted to the Canadian Seamen's Union on the grounds that this organization was not a trade union within the meaning of the Industrial Relations and Disputes Investigation Act.

Introduction

A conclusion was written during December to the protracted dispute between the major Canadian Railways and the two groups of international and national labour unions representing their non-operating employees. The dispute originally involved demands made on behalf of the employees for wage increases of seven cents in hourly rates of pay in the case of the international unions and ten cents in the case of the national organizations, together with the establishment of a five-day forty-hour work week effective September 1, 1949, instead of the generally existing work week of forty-eight hours, with no reduction in take-home pay, and with overtime to be paid for at the rate of time and one-half. Proposals made by the Railways for a ten-point revision in working Rules in order to facilitate a "fair and economical" introduction of a shorter work week were also involved.

The dispute, as has been reported in previous issues of the LABOUR GAZETTE, began on June 16, 1949, when the various unions served notice of their demands upon the Railways, and culminated in a nation-wide strike which crippled transportation, telegraphs and ancillary services from August 22 to August 30, 1950. The strike was terminated by special legislation adopted at an emergency session of Parliament, cited as The Maintenance of Railway Operation Act. Pursuant to this statute, the Hon. R. L. Kellock, one of the Justices of the Supreme Court of Canada, was appointed on October 17, 1950, by His Excellency the Governor General in Council as Arbitrator to determine and decide all matters that had not been agreed upon in earlier negotiations between the Railways and the Unions.

The Award of Mr. Justice Kellock, which was made public on December 18, 1950, is printed in full beginning page 194. It directed that the four-cent increase in wage rates provided for in The Maintenance of Railway Operation Act should be increased by a further three cents, the resulting seven cents to be effective as from September 1, 1950, and that the five-day forty-hour week should become effective June 1, 1951, provided that from the said date to and including August 31, 1951, straight time only should be payable to the employees up to forty-eight hours per week.

One of the provisions of The Maintenance of Railway Operation Act was that the Arbitrator should decide the matters at issue "within the limits of the proposals that he determines were made by the Railway companies and the unions in respect of that matter" at the time negotiations were terminated between them on August 26, 1950, or which were made by either party after commencement of the said Act at any time before the matter came before him and "which narrow these limits". It being necessary to determine at the outset the area in dispute between the parties, Mr. Justice Kellock declared that he found that the respective positions of the Railways and the employees on August 26, 1950 (in which no changes were made by either the companies or the unions up to the time the arbitration opened), were as follows:—

This section covers proceedings under two federal statutes, the Industrial Relations and Disputes Investigation Act and the Conciliation and Labour Act, involving the administrative services of the Minister of Labour, the Canada Labour Relations Board and the Industrial Relations Branch of the Department.

Railway Companies	Unions
1. A 4-cent per hour wage increase to be effective September 1, 1950.	1. A 7-cent per hour wage increase to be effective June 1, 1950.
2. A 5-day, 40-hour week to begin September 1, 1951.	2. A 5-day, 40-hour week effective June 1, 1951, with a 3-months' transitional period during which straight time would be payable up to 48 hours a week.
3. A 2-year contract to run from September 1, 1950.	3. Same as No. 3 opposite.
4. An agreement along lines indicated by the negotiating committee (of the unions) as satisfactory to negotiate amendments in certain rules.	4. Same as No. 4 opposite.
5. A clause dealing with payment of straight time up to 48 hours a week in the event of a national emergency.	5. Same as No. 5 opposite.
6. Hotel and water transport workers to be covered in a separate contract for one year, to be granted an increase of 2 cents per hour effective September 1, 1950.	6. Hotel and water transport employees to be dealt with on the same basis as the other employees.

The Arbitrator also mentioned that, at the same time, there was in existence an alternative proposal on the part of the unions for a wage increase of five cents per hour retroactive to January 1, 1950, provided a cost-of-living bonus clause be made effective at once granting a one-cent per hour wage increase for each one-point rise in the cost-of-living index. The other terms of this proposal were identical with the items numbered two to six of the employees' other proposal set out above.

Mr. Justice Kellock wrote into his Award the text of certain documents upon which the parties to the dispute had agreed earlier, and which were filed with him as exhibits during the course of the arbitration. In line with these documents, the Arbitrator directed that an agreement arrived at between the parties should govern for the purpose of bringing the forty-hour week into operation. This agreement provided that a sub-committee composed of representatives from the union organizations and the Railways should prepare a master agreement setting out the principles that are to govern the revision of the individual wage agreements, and providing for a method of final disposition of any disputes that might arise in applying these principles. The agreement contained a provision that if the sub-committee was unable to agree as to any one or more of such principles, the parties would try to agree on a referee to decide such point or points. Failing mutual agreement, they would jointly request the Minister of Labour to appoint a referee. The agreement also provided that the decision of the referee should be rendered within fifteen days of the close of his hearings, and should be final and binding subject only to the parties themselves mutually agreeing to adopt a principle other than the decision of the referee.

Another exhibit, the provisions of which the Arbitrator directed should be written into each wage agreement, related to an understanding arrived at by the parties as to the manner in which negotiations would be carried on with respect to the ten changes in Rules contained in the railways' proposals. This differed from the negotiating procedure for bringing the forty-hour week into operation in that, instead of providing for a sub-committee representing both the employers' group and the groups of associated unions to work out a master agreement, it provided for negotiations at the level of the parties to each individual collective agreement. Here again, the parties undertook that any matter arising out of such negotiations not agreed upon by the parties to the individual collective agreement, and which was necessary to be decided for the conclusion of the collective agreement subject to The Maintenance of Railway Operation Act, should be referred to a referee by the parties to such individual agreement. If the parties failed to agree on a suitable referee, they would jointly request the Minister of Labour to appoint a referee. The decision of the referee was to be final and binding on both

parties, subject only to the parties themselves mutually agreeing to adopt some other principle.

The Arbitrator's Award directed further that each individual agreement was also to contain a clause providing that in the event that the Government of Canada officially informed the companies and unions that the international situation had created emergency conditions which required extraordinary efforts on the part of all industry and all Canadians, it was agreed that the unions would waive penalties on overtime which would have been deemed to be overtime under the contracts existing at the date of the agreement.

With regard to hotel and water transport employees, the Arbitrator's Award directed that the terms of all agreements to which they were parties should be for one year from September 1, 1950. These employees were not granted any reduction in hours of work and were not included in the additional increase of three cents in the wage rates granted to the railway employees, beyond the wage increase of four cents per hour to which they were entitled under the terms of The Maintenance of Railway Operation Act.

With respect to the request for the check-off included in the original demands of the national labour unions, the Arbitrator determined as a fact that this did not remain as one of the matters in dispute on August 26, 1950. It was not, therefore, a matter to be dealt with in the arbitration proceedings under The Maintenance of Railway Operation Act.

* * *

Widespread interest was created by Reasons for Judgment issued by the Canada Labour Relations Board at its December sittings, in which the Board revoked an order of certification granted to the Canadian Seamen's Union on November 20, 1947, by the Wartime Labour Relations Board, as the bargaining agent of a unit of unlicensed employees of Branch Lines, Limited, Sorel, Quebec.

The Judgment arose out of an application for revocation made by Branch Lines, Limited, in which it was contended, first, that the Canadian Seamen's Union no longer represented a majority of the company's unlicensed employees, and, second, in effect that the union was a Communist-dominated organization, and was not a trade union entitled to certification under the Industrial Relations and Disputes Investigation Act in view of its purposes and activities.

The Board decided that the company had not submitted evidence to support its contention that the Canadian Seamen's Union no longer represented the majority of the employees in the bargaining unit, and that the application for revocation, in so far as it was based on this ground, failed. However, relying upon a section of the Industrial Relations and Disputes Investigation Act that gives the Board authority to determine questions as to whether an organization or association is a trade union, the Board found that the Canadian Seamen's Union was not a trade union within the meaning of the Act, and revoked the previous order of certification.

The text of the Board's Reasons for Judgment is reprinted below in this section. It contains a review of the evidence upon which the Board decided that the primary purposes of the Canadian Seamen's Union were no longer the purposes of a trade union as set forth in the Act.

* * *

Year-end statistics under the Industrial Relations and Disputes Investigation Act indicated that from the inception of the Act on September 1, 1948, to December 31, 1950, a total of 200 applications for certification were received by the Canada Labour Relations Board. Of these, 102 applications were granted, while 44 were rejected and 33 were withdrawn. The remaining 21 were still under investigation.

The following statement concerns the scope and administration of the Industrial Relations and Disputes Investigation Act and the Conciliation and Labour Act.

Conciliation services under the Industrial Relations and Disputes Investigation Act and under the Conciliation and Labour Act are provided by the Minister of Labour through the Industrial Relations Branch. The Branch also acts as the administrative arm of the Canada Labour Relations Board under the former Act.

The Industrial Relations and Disputes Investigation Act came into force on September 1, 1948. It revoked the Wartime Labour Relations Regulations, P.C. 1003, which became effective in March, 1944, and repealed the Industrial Disputes Investigation Act, which had been in force from 1907 until succeeded by the Wartime Regulations in 1944.

Proceedings begun under the Wartime Regulations are continued in so far as the services involved in such proceedings are authorized under the new Act. Likewise, decisions, orders and certifications given by the Minister of Labour and the Wartime Labour Relations Board are continued in force and effect by the new Act.

The Act applies to industries within Dominion jurisdiction, i.e., navigation, shipping, interprovincial railways, canals,

telegraphs, interprovincial and international steamship lines and ferries, aerodromes and air transportation, radio broadcasting stations and works declared by Parliament to be for the general advantage of Canada or two or more of its provinces. Additionally, the Act provides that provincial authorities, if they so desire, may enact similar legislation for application to industries within provincial jurisdiction and make mutually satisfactory arrangements with the Dominion Government for the administration of such legislation.

The Minister of Labour is charged with the administration of the Act and is directly responsible for the appointment of Conciliation Officers, Conciliation Boards, Industrial Inquiry Commissions for the consideration of complaints that the Act has been violated or that a party has failed to bargain collectively, and of applications for consent to prosecute.

The Canada Labour Relations Board is established under the Act as successor to the Wartime Labour Relations Board to administer provisions concerning the certification of bargaining agents, the writing of provisions—for incorporation into collective agreements—fixing a procedure for the final settlement of disputes concerning the meaning or violation of such agreements and the investigation of complaints referred to it by the Minister that a party has failed to bargain collectively and to make every reasonable effort to conclude a collective agreement.

Copies of the Industrial Relations and Disputes Investigation Act and the Rules of Procedure of the Canada Labour Relations Board are available upon request to the Department of Labour, Ottawa.

Conciliation services are also provided by the Industrial Relations Branch under the provisions of the Conciliation and Labour Act. This statute empowers the Minister of Labour to inquire into the causes and circumstances of a dispute, to take such steps as seem expedient for the purpose of bringing the parties together, and to appoint a conciliator or arbitrator when requested by the parties concerned.

Proceedings under the Industrial Relations and Disputes Investigation Act are reported below under two headings: (1) Certification and other Proceedings before the Canada Labour Relations Board, and (2) Conciliation and other Proceedings before the Minister of Labour. From time to time, as required, a third article under this section will cover Conciliation Proceedings under the Conciliation and Labour Act.

Industrial Relations Officers of the Department of Labour are stationed at Vancouver, Winnipeg, Toronto, Ottawa, Montreal, Fredericton and St. John's, Newfoundland. The territory of two officers resident in Vancouver comprises British Columbia and Alberta; two officers stationed in Winnipeg cover the provinces of Saskatchewan and Manitoba and Northwestern Ontario; three officers resident in Toronto confine their activities to Ontario; two officers in Montreal are assigned to the province of Quebec, and two officers resident in Fredericton and St. John's represent the Department in the Maritime Provinces and Newfoundland. The headquarters of the Industrial Relations Branch and the Director of Industrial Relations and staff are situated in Ottawa.

Certification and Other Proceedings Before the Canada Labour Relations Board

The Canada Labour Relations Board met for two days during the month of December. The Board issued two certificates designating bargaining agents, rejected one application for certification, revoked one certificate designating a bargaining agent, and ordered one representation vote. During the month the Board received ten applications for certification.

Applications for Certification Granted

1. The West Coast Seamen's Union (Canada), on behalf of a unit of unlicensed personnel employed in the deck, engine-room and steward's departments of deepsea dry cargo vessels of Canadian registry owned or bareboat operated by Canadian Union Line Limited, Vancouver (L.G., Nov., 1950, p. 1892).

2. The Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees, on behalf of a unit of news stand attendants employed on vessels of the Canadian Pacific Railway Company (British Columbia Coast Steamship Service) (L.G., Jan., 1951, p. 55).

Application for Certification Rejected

The Canadian Brotherhood of Railway Employees and Other Transport Workers, applicant, and Island Motor Transport Limited, Charlottetown, P.E.I., respondent (L.G., Oct., 1950, p. 1669). The application was rejected for the reason that, in view of the present scope of the company's operations, the Board was without jurisdiction in the matter.

Certificate Designating Bargaining Agent Revoked

The Board revoked the order of November 20, 1947 (L.G., Dec., 1947, p. 1783), certifying the Canadian Seamen's Union as the bargaining agent of unlicensed personnel employed on the ships of Branch Lines Limited, Sorel, P.Q. (See Reasons for Judgment below.)

Representation Vote Ordered

The Communication Workers of America, applicant, and the Northern Telephone Company Limited, New Liskeard, Ont., respondent (L.G., Dec., 1950, p. 2051). The Board ordered the vote following an investigation and a public hearing of the parties concerned.

Applications for Certification Received

1. Local No. 298, Building Service Employees International Union, on behalf of a unit of employees of the Canadian Pacific Railway Company (Telegraphs Division, Real Estate Department) (Investigating Officer: L. Pepin).

2. The Canadian Air Line Pilots Association, on behalf of pilots employed by Queen Charlotte Airlines Limited, Sea Island, B.C. (Investigating Officer: J. S. Gunn).

3. The Canadian Communications Association, on behalf of a unit of employees of the Canadian Overseas Telecommunication Corporation, Montreal (Investigating Officer: R. Trépanier).

4. The Brotherhood of Locomotive Firemen and Enginemen, on behalf of a unit of locomotive engineers, handling steam or other classes of motive power, employed by the Canadian National Railways (Atlantic Region, Newfoundland District) (Investigating Officer: L. Pepin).

5. The Brotherhood of Locomotive Firemen and Enginemen, on behalf of a unit of locomotive firemen, locomotive firemen's helpers, hostlers, and hostlers' helpers, handling steam or other classes of motive power, employed by the Canadian National Railways (Atlantic Region, Newfoundland District) (Investigating Officer: L. Pepin).

6. The Seafarers' International Union of North America, Canadian District, on behalf of a unit of unlicensed personnel employed by the Victoria Tug Company Limited, Victoria, B.C. (Investigating Officer: G. R. Currie).

7. The National Association of Marine Engineers of Canada, Inc., on behalf of marine engineers below the rank of chief engineer employed on vessels owned by Colonial Steamships Limited and operated by Sarnia Steamships Limited, Sarnia, Ont. (Investigating Officer: F. J. Ainsborough).

8. The National Association of Marine Engineers, Inc., on behalf of marine engineers below the rank of chief engineer employed on vessels owned and operated by Sarnia Steamships Limited, Sarnia, Ont. (Investigating Officer: F. J. Ainsborough).

9. The National Association of Marine Engineers of Canada, Inc., on behalf of marine engineers below the rank of chief engineer employed by Keystone Transport Limited, Montreal (Investigating Officer: R. Trépanier).

10. Transport Drivers, Warehousemen and Helpers' Union (Local No. 106, International Brotherhood of Teamsters, Chauffeurs, Warehousemen and Helpers of America), on behalf of employees of J. B. Motor Express and subsidiary companies (Investigating Officer: R. Trépanier).

REASONS FOR JUDGMENT in application for revocation of certification affecting

Branch Lines Limited, with Head Office at Sorel, Que., *Applicant*, *and*
Canadian Seamen's Union, *Respondent*.

The Board consisted of the Hon. Chief Justice G. B. O'Connor, Chairman, and Messrs. W. L. Best, E. R. Complin, J. A. D'Aoust, A. Deschamps, A. J. Hills, A. R. Mosher, G. Picard and H. Taylor, members. The Judgment of the Board was delivered by the Chairman.

The Applicant is a company engaged in water transportation, and operates a number of ships on the St. Lawrence waterways.

The Respondent was certified on November 20, 1947, by order made by the Wartime Labour Relations Board under the Wartime Labour Relations Regulations, as the bargaining agent of a unit of employees of the Applicant described as unlicensed personnel employed upon the ships of the Applicant. The order of certification made by the Wartime Labour Relations Board as aforesaid has continuing force and effect under the Industrial Relations and Disputes Investigation Act by virtue of the provisions of section seventy-two of that Act, which provides that every order, decision or determination or any other act or thing made, given or done by or on behalf of the Wartime Labour Relations Board shall in so far as the said order, decision, determination, act or thing might be made, given or done under the Industrial Relations and

Disputes Investigation Act, be deemed to have been made, given or done by the Canada Labour Relations Board. The undertaking of the Applicant upon which the employees in the unit are employed falls within the category of undertakings or businesses to which the Act applies, under the head of navigation and shipping.

The Applicant contends that the order of certification should be revoked on two grounds: firstly, on the ground that the Respondent no longer represents the majority of employees in the bargaining unit; and, secondly, in effect on the ground that the Respondent is a Communist-dominated organization, and is not a trade union entitled to certification under the Act in view of its purposes and activities.

The Act by section eleven thereof empowers the Board to revoke certification where it is satisfied that the certified bargaining agent no longer represents the majority of employees in the unit for which certification was granted.

The Act by subsection two of section sixty-one empowers the Board, if it considers it advisable so to do, to reconsider any decision or order made by it under the Act, and to vary or revoke any decision or order made by it under the Act. Subsection one of section sixty-one provides that if, in any proceeding before the Board, a question arises under the Act as to whether an organization or association is an employers' organization or a trade union, the Board shall decide the question and its decision shall be final and conclusive for all the purposes of the Act.

As the Applicant has not submitted evidence to support its contention that the Respondent no longer represents the majority of employees in the bargaining unit, the application for revocation, in so far as it is based upon this ground, fails.

It is necessary now to deal with the other issue raised in this application.

Under the provisions of the Industrial Relations and Disputes Investigation Act only an organization or association of persons which qualifies as a "trade union" within the meaning of the definition of that term in the Act may be certified under the Act as the bargaining agent of employees.

Para. (r) of section two of the Act defines a trade union to mean "any organization of employees formed for the purpose of regulating relations between employers and employees but shall not include an employer-dominated organization."

Where in any matter coming before the Board it is necessary for the Board to determine whether an organization is a trade union for the purposes of the Act, the Board ordinarily accepts the purposes set out in the constitution of the organization as being the purposes of the organization. Nevertheless, the Board is not bound to accept the purposes as so set forth in the constitution of the organization as the purposes of the organization where it is satisfied that the organization has engaged in activities and operations which establish beyond reasonable doubt that the primary and real purposes of the organization are other than those set forth in its constitution, or are other than those alleged by the organization to be its purposes.

Regardless of what claim the Respondent may have had at an earlier date to be a trade union within the meaning of the Act, the Board is satisfied for the reasons hereinafter set out that the Respondent's primary purpose is not such as to bring the organization within the definition of "trade union" or "union" in the Act.

It is a matter of common knowledge that in the course of the strike of seamen employed on ships of Canadian shipping companies operating out of Eastern ports, declared by the Respondent in the spring of 1949, the Respondent worked actively in defiance of Canadian law to tie up a number of Canadian ships in ports in the United Kingdom, Europe, South Africa, West Indies, New Zealand and Australia, and for this purpose enlisted the support of reputed Communist groups within dock workers' organizations in the United Kingdom and in ports in other countries mentioned with a view to the withdrawal of facilities for loading and unloading the ships so tied up at these ports. The action so taken by the Respondent in the United Kingdom, resulting in a series of dock strikes in that country, is fully set out in the British Government white paper entitled "Review of the British Dock Strikes 1949" presented to Parliament by the Minister of Labour and National Service in December, 1949. In a summary contained in that report of the salient features of these occurrences, the report states that these strikes of dock workers in the United Kingdom were fomented by the Canadian Seamen's Union to support a strike of seamen employed by Canadian shipping companies on vessels operated out of Eastern Canadian ports and a tie-up of vessels upon which these seamen were employed in British ports. The report then states that this campaign in the United Kingdom was founded upon the support mainly of members of the Communist party and their sympathizers. In a Foreword to the report, the Minister said: "The evidence shows that there was throughout a cold and deliberate plan, and that

unofficial leaders were completely indifferent to the loss and suffering that might result. They had one aim only—to restore the fortunes of the Communist-dominated Canadian Seamen's Union".

The Board regards these incidents as evidence of the close association of the Respondent with foreign elements of the international Communist front in the promotion of international Communist policies and activities which are entirely foreign to the purposes of a trade union under the Act.

It is common knowledge in Canada that the Respondent is a Communist-directed organization. The political affiliation of an organization does not affect its status as a trade union. Nevertheless, the frequent transformation made by Communist elements of organizations formed for other purposes, over which they obtain control, into organizations whose real and ulterior purpose becomes the promotion of Communist objectives is well known in this country.

The Respondent was expelled from membership in the International Transport Workers' Federation at the 21st Biennial Congress of the Federation held in July, 1950. This long-established international organization comprises over 80 trade unions drawn from all five continents. The Congress record of expulsion cites that the Respondent "gave out instructions which conflict with all tradition of maritime trade union action and also with Canadian law", also characterizes the actions of the Respondent as being "contrary to all rules of trade union strategy" and recites that the decision to expel the Respondent from the International Transport Workers' Federation was taken because the Respondent had "harmed the interests of its own members and those of other affiliated unions".

The Respondent was also expelled from membership in the Trades and Labour Congress of Canada at the Convention of that Congress held in September, 1949, after having been suspended by the Executive Committee of the Congress as from June 3, 1949. It appears from the Congress record of the Convention that these decisions were made after consideration and condemnation of the actions of the Respondent in the calling of the seamen's strike as being unnecessary, and in the events following thereon as being detrimental to trade union interests.

Expulsion from a trade union congress cannot in itself deprive a union of its status under the Act. The Board wishes it to be clearly understood that it does not base its decision on the action taken by the trade union congresses. The Board does, however, give weight to the reasons given by the trade union congresses in the expulsion of the Respondent from membership as lending weight to the conclusion that the primary purposes of the Respondent are no longer the purposes of a trade union as set forth in the Act.

For the reasons given above, the Board finds that the Respondent is not a trade union within the meaning of the Act, and therefore is not entitled to certification as a bargaining agent under the provisions of the Act.

The Board accordingly revokes the order of November 20, 1947, certifying the Respondent as the bargaining agent of employees of the Applicant consisting of unlicensed personnel employed upon the ships of the Applicant.

(Sgd.) G. B. O'Connor,
Chairman
for the Board.

Dated at Ottawa, December 7, 1950.

Conciliation and Other Proceedings Before the Minister of Labour

During the month of December the Minister appointed Conciliation Officers to deal with disputes between the following parties:—

1. Transport Drivers, Warehousemen and Helpers' Union, and (Local No. 106, International Brotherhood of Teamsters, Chauffeurs, Warehousemen and Helpers of America), and Smith Transport Limited, Montreal (Conciliation Officer: L. Pepin).

2. Dawson Miners' Union (Local No. 564, International Union of Mine, Mill and Smelter Workers) and the Yukon Consolidated Gold Corporation Limited, Dawson, Y.T. (Conciliation Officer: G. R. Currie).

3. The Canadian Air Line Pilots Association and Trans-Canada Air Lines (Conciliation Officer: R. H. Hooper).

4. Local No. 333, International Union of United Brewery, Flour, Cereal, Soft Drink and Distillery Workers of America, and the Alberta Wheat Pool (Elevator Department), Vancouver (Conciliation Officer: G. R. Currie).

5. Local 342, United Packinghouse Workers of America, and Robin Hood Flour Mills Limited, Saskatoon (Conciliation Officer: R. H. Hooper).

6. The Canadian Air Line Flight Attendants Association and Trans-Canada Air Lines (Conciliation Officer: R. Trépanier).

Settlements Effected by Conciliation Officers

1. On December 20 the Minister received a report from Bernard Wilson, Conciliation Officer, indicating the settlement of matters in dispute between Local B1440, International Brotherhood of Electrical Workers, and the Chaudière Water Power Owners and Lessees (L.G., Dec., 1950, p. 2053).

2. On December 26 the Minister received a report from Liguori Pepin, Conciliation Officer, indicating the settlement of matters in dispute between the Canadian Brotherhood of Railway Employees and Other Transport Workers and the Abitibi Coach Lines and Transportation Company Limited, Val D'Or, P.Q. (L.G., Jan., 1951, p. 55).

Conciliation Boards Appointed

1. On December 13 the Minister appointed a Board of Conciliation and Investigation to deal with matters in dispute between the Canadian Navigators' Federation and the Prescott and Ogdensburg Ferry Company Limited, Prescott, Ont. The Board was appointed following receipt of the report of Liguori Pepin, Conciliation Officer (L.G., Dec., 1950, p. 2054). Constitution of the Board had not been completed at the end of the month.

2. On December 27 the Minister appointed a Board of Conciliation and Investigation to deal with matters in dispute between Local No. 333, International Union of United Brewery, Flour, Cereal, Soft Drink and Distillery Workers of America, and the Alberta Wheat Pool (Elevator Department), Vancouver. The Board was appointed following receipt of the report of G. R. Currie, Conciliation Officer (See above). Constitution of the Board had not been completed at the end of the month.

Conciliation Boards Fully Constituted

1. The Board of Conciliation and Investigation appointed by the Minister on October 19, 1950, to deal with matters in dispute between Eldorado Mining and Refining (1944) Limited, Port Hope, Ont., and Local No. 13173, District 50, United Mine Workers of America (L.G., Dec., 1950, p. 2054), was fully constituted on December 2 with the appointment of His Honour Judge W. F. Schwenger, Hamilton, Ont., as Chairman. Judge Schwenger was appointed by the Minister in the absence of a joint recommendation from the other two members of the Board, Messrs. J. P. Pratt, K.C., and Herbert Orliffe, both of Toronto, who had previously been appointed on the nominations of the company and union, respectively.

2. The Board of Conciliation and Investigation appointed by the Minister on November 17, 1950, to deal with matters in dispute between Canada Coach Lines Limited, Hamilton, Ont., and Local No. 1454, Amalgamated Association of Street, Electric Railway and Motor Coach Employees of America (L.G., Jan., 1951, p. 56), was fully constituted on December 14 with the appointment of His Honour Judge R. S. Clark, Guelph, Ont., as Chairman. Judge Clark was appointed by the Minister on the joint recommendation of the other two members of the Board, Messrs. R. V. Hicks and A. F. MacArthur, both of Toronto, who had previously been appointed on the nominations of the company and union, respectively.

Consent to Prosecute Refused

During the month the Minister refused consent to prosecute in the matter of an application, submitted under Section 46 of the Act by the Canadian Seamen's Union, for consent to prosecute Branch Lines Limited, Sorel, P.Q., for alleged violations of certain provisions of the Act (L.G., Aug., 1950, p. 1173).

Settlement Following Board Procedure

During December advice was received that matters in dispute between the Lakehead Terminal Elevator Association, representing ten elevator companies at Fort William and Port Arthur, and the Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees, had been settled following receipt by the parties of the report of the Board of Conciliation and Investigation which dealt with the dispute (L.G., Oct., 1950, p. 1669) and following further intervention by the Department of Labour.

Award of the Honourable Mr. Justice R. L. Kellock, Arbitrator in the Matter of the Maintenance of Railway Operation Act

Pursuant to my appointment by P.C. 4994, dated October 17, 1950, I proceeded to hear this matter at the City of Montreal on the 27th, 30th and 31st days of October, and the 1st, 8th, 9th and 10th days of November, 1950, and for that purpose was attended by representatives of the railways and the organizations of the employees concerned, as set out in Appendix "A" hereto. Further material was subsequently filed on November 20, December 1 and 5, 1950.

The railways represented before me operate 92 per cent of the total railway mileage in Canada. The employees directly concerned constitute what is known as the non-operating employees, as distinct from the employees who actually operate the trains, that is, engineers, firemen, conductors, trainmen and yardmen. The non-operating employees of the Canadian National and Canadian Pacific Railways, the two largest systems, number 85,484 in the case of the former and 62,979 in the case of the latter, a total of 148,463. There are in addition 6,286 hotel employees and 2,977 water transport employees. The non-operating employees who are organized, are divided into two major groups, composed of fifteen international and two national labour unions.

The operating employees, some 31,461, have also served notices for wage increases of various amounts, as to which negotiations are in progress, and I am given to understand that any change in wages or hours of the non-operating employees inevitably influences settlement of the same matters with respect to operating employees. All of the approximately 189,000 employees of the two main systems are therefore either directly or indirectly involved. I have set out in Schedule I the wage rates of the main classifications of the first-mentioned group, and in Schedule II those of the second. Railway employees are, in addition, entitled to certain pass privileges and pensions. General statements as to the latter in the case of the two major systems are set out in Schedules III and IV.

By reason of its bearing on the questions here involved, a short history leading up to the present situation is relevant.

On the 16th of June, 1949, the various unions served upon the railways notices to treat with respect to the revision of all existing agreements, the specified matters to be negotiated being

> 1. An increase of seven cents in hourly rates of pay in the case of the international organizations, and ten cents in the case of the national organizations.
>
> 2. The establishment of a five-day, forty-hour work week instead of the existing forty-eight-hour week, effective September 1, 1949, the existing weekly earnings for forty-eight hours to be maintained in respect of the forty-hour week, with overtime to be paid for at the rate of time and one-half.

On receipt of this notice, the railways, under date of the 4th of July, 1949, served notice indicating their willingness to consider the matters raised, and asked on their part for changes in certain terms of the existing agreements deemed by the railways to be unduly onerous and restrictive of efficient operation. Negotiations proceeded, but as no agreement resulted, resort was first had to conciliation at the hands of officers of the Department of Labour. Subsequently two boards of conciliation under a common chairman were appointed and they reported on April 11, 1950. The railways accepted the findings of the boards, but the employees did not, and a strike took place at 6:00 a.m. of August 22, 1950. The Maintenance of Railway Operation Act was passed on August 30, 1950, and I have been given to understand that September 1st is to be taken as the day upon which the employees returned to work.

It is provided by subsection 1 of Section 5 of the statute that, failing agreement between a railway company and a union, either as to the terms of a collective agreement to which the Act applies, or as to any revision or amendment thereof, the Governor in Council shall appoint an arbitrator to decide all matters not then agreed upon between them that appear to the arbitrator necessary to be decided for conclusion of such collective agreement, including the fixing of a term during which the agreement shall operate and, subject to subsection 2, the fixing of a day or days, whether before or after the decision of the arbitrator, to which the terms of the collective agreement may be retroactive.

By subsection 3, it is provided that in deciding any "matter" under the section, the arbitrator shall decide the matter

> within the limits of the proposals that he determines were made by the railway companies and the unions in respect of that matter

at the time negotiations were terminated between them on August 26, 1950, or which

were made by either after the commencement of the statute at any time before the "matter" came before him

which narrow these limits.

The arbitrator, however, may not reduce the increase of four cents per hour in existing wage rates provided for by Section 3.

It is therefore necessary to determine at the outset the area in dispute between the parties, and I find that the respective positions of the railways and the employees on August 26, 1950, were as follows:—

Railway Companies	Unions
1. A 4-cent per hour wage increase to be effective September 1, 1950.	1. A 7-cent per hour wage increase to be effective June 1, 1950.
2. A 5-day, 40-hour week to begin September 1, 1951.	2. A 5-day, 40-hour week effective June 1, 1951, with a 3-months' transitional period during which straight time would be payable up to 48 hours a week.
3. A 2-year contract to run from September 1, 1950.	3. Same as No. 3 opposite.
4. An agreement along lines indicated by the negotiating committee (of the unions) as satisfactory to negotiate amendments in certain rules.	4. Same as No. 4 opposite.
5. A clause dealing with payment of straight time up to 48 hours a week in the event of a national emergency.	5. Same as No. 5 opposite.
6. Hotel and water transport workers to be covered in a separate contract for one year, to be granted an increase of 2 cents per hour effective September 1, 1950.	6. Hotel and water transport employees to be dealt with on the same basis as the other employees.

At the same time, there was in existence an alternative proposal on the part of the unions as follows:—

1. A 5-cent per hour wage increase retroactive to January 1, 1950, provided a cost-of-living bonus clause be made effective at once granting a 1-cent per hour wage increase for each one point rise in the cost-of-living index.

The other terms of this proposal were identical with items 2 to 6 of the employees' other proposal set out above.

No changes were made by either the companies or the unions up to the time the arbitration opened.

It was contended on behalf of the employees at one stage of the hearings that each of their alternative proposals was a "package" offer, to which effect must be given in toto or not at all, with the result that if the arbitrator did not ultimately adopt the seven-cent or the five-cent term, the employees would be free from their offer of a two-year contract. It was argued that in that event the arbitrator could fix a term of less but not more than two years, as the upper limit would have been established by the proposal of the railways.

This contention is obviously fallacious and excluded by the terms of the statute which fixes, at the date mentioned, the positions of the parties distributively with respect to each term of their respective proposals. The contention was ultimately withdrawn, and it was agreed that the duration of each contract to be settled was two years throughout.

There was some discussion also as to the content to be given to the somewhat general language employed on each side in items 4 and 5 of the proposals, but any misunderstanding between the parties as to these has now been settled. Exhibit 27 deals with item 4, and is as follows:—

> In order to conclude the collective agreements to which the Maintenance of Railway Operation Act applies it will be necessary for the parties to each collective agreement to negotiate with respect to the ten changes in rules contained in the railways' proposals in an effort to reach agreement on such changes.
>
> Therefore it is hereby agreed that:—
>
> 1. Any matter arising out of such negotiations not agreed upon by the parties to the individual collective agreement and which is necessary to be decided for the conclusion of the collective agreement subject to the Maintenance of Railway Operation Act shall be referred by the parties to such agreement for decision to a referee.

2. Such referee shall be chosen by agreement by the parties concerned. In the event of failure to agree on a suitable referee they shall jointly request the Minister of Labour of the Dominion of Canada to appoint such referee.
3. Such referee shall decide only the points coming within the scope of Section 1 hereof, referred to him in writing by the parties jointly or severally. He shall receive submissions from the representatives of both parties and may require such other information as he may deem necessary to enable him to reach a decision. His decision shall be rendered in writing within fifteen days of the close of his hearings and shall be final and binding on both parties, subject only to the parties mutually agreeing to adopt a principle other than the decision of the referee.
4. The expense of such referee and of any necessary hearings shall be divided equally between the parties hereto.

Item 5 is dealt with by Exhibit 30, which is as follows:—

In the event that the Government of Canada officially informs the Companies and Unions that the international situation has created emergency conditions which require extraordinary efforts on the part of all industry and all Canadians, it is agreed that the Unions will waive penalties on overtime which would not have been deemed to be overtime under the contracts existing at the date of this agreement.

It is the common understanding that "the contracts existing at the date of this agreement" means the contracts existing at the date of the exhibit, apart from any change of terms which may be effected by this award.

For the purpose of bringing the forty-hour week into operation, the parties have also entered into the following agreement (Exhibit 28):—

1. The parties hereto have agreed that a forty-hour week is to be established for certain categories of railway employees.
2. For the purpose of establishing principles to govern the application of a forty-hour week to such railway employees the parties agree that representatives from the organizations and the railways shall constitute a sub-committee.
3. This sub-committee shall prepare a master agreement, setting out the principles that are to govern the revision of the individual wage agreements to give effect to the forty-hour week, and providing for a method of final disposition of any disputes that may arise in applying these principles to the individual wage agreements.
4. In the event that the sub-committee is unable to reach agreements as to any one or more of such principles to govern the revision of the individual wage agreements, the parties hereto shall endeavour to agree on a referee to decide such point or points at issue. Failing agreement between the parties on a suitable referee they shall jointly request the Minister of Labour of the Dominion of Canada to appoint such referee.
5. Such referee shall decide only the points referred to him in writing by the sub-committee. He shall receive submissions from the representatives of each party on the sub-committee and may require such other information as he may deem necessary to enable him to reach a decision. His decision shall be rendered in writing within fifteen days of the close of his hearings and shall be final and binding on both parties, subject only to the parties mutually agreeing to adopt a principle other than the decision of the referee.
6. The expenses of such referee and of any necessary hearings shall be divided equally between the parties hereto.
7. This agreement shall be effective 7th November, 1950, and shall remain in effect until completion of the master agreement as referred to in Section 3.

The consummation of these agreements greatly facilitated the arbitration and I cannot refrain from expressing appreciation of the spirit which brought them about, which in fact prevailed throughout the hearings.

With respect to the request for the check-off included in the notice to treat of the national organizations, I determined as a fact at the hearings that this did not remain as one of the matters in dispute on August 26, 1950. It is therefore not a matter to be dealt with in this arbitration.

On behalf of the unions it is contended that the effect of the statute has been to equate the hotel and water transport

employees with the other employees here in question, so that if there is to be an adjustment in wages or hours as to the latter group, the same must apply to all. In support of this contention reference is made to certain expressions in the preamble of the statute. I was also referred to the discussion in Parliament when the Bill was under consideration.

In my opinion, the language of subsection 3 of Section 5 is clear and mandatory. The arbitrator is to decide any particular matter "within the limits of the proposals that he determines were made by the railway companies and the unions in respect of that matter" at the time pointed out by the statute. Accordingly, even if there can be said to be any ambiguity in the preamble, which I do not suggest, the operative provisions must govern.

So far as the employees other than the hotel and water transport employees are concerned, the reason that the forty-hour week became statutory is due to the fact that it was a common term of the proposals on each side, the only difference being as to its effective date. With respect to the hotel and water transport employees, however, the railways' proposal was on the basis of continuation of the existing forty-eight-hour week and they were proposing a one year contract. Accordingly, in their case the area in dispute so far as the standard work week and contract period are concerned, lies between forty-eight hours and forty hours, and between one year and two years. With respect to rates per hour, the railways offered two cents, while the unions proposed the same alternative increases as they designed to apply to the other employees. The statute, by Section 3, has expressly given an increase of four cents to all employees including hotel and water transport employees, so that so far as wage rates are concerned, the area in dispute with respect to these employees is the same as in the case of the other employees. I propose to deal with the questions affecting the hotel and water transport staffs after I have dealt with those relating to the other employees here in question.

With respect to hourly rates, the request of the employees in June 1949 for seven cents and ten cents was, as put in their written submission in these proceedings

> calculated simply to maintain the living standards established in 1948 and the cost of living-wage relationship which then existed.

It is pointed out by the employees that the cost-of-living index has continued to rise substantially since June 1949, so that a larger amount would have been then warranted if the subsequent course of events could have been envisaged. Accordingly, it is urged that the only way recoupment can now be attained is by increasing the hourly rate by the full seven cents asked for, and by a direction that the increase be made retroactive.

The case for the employees is exclusively rested upon this maintenance of living standard basis. Although it is "buttressed", as their submissions state, by comparisons with rates in outside industry, the employees' case remains "based on cost-of-living increase." From this point of view, taken by itself, the relevant facts are as follows:—

The cost-of-living index, on the 1935 to 1939 base equalling 100, stood at 169·8 on September 1, 1950. This represents a rise of 67·3 per cent above the annual average index of 101·5 for the year 1939. In the last-mentioned year, the average hourly earnings of non-operating railway employees, the group here in question, were 57·6 cents. Merely to have kept pace with the increase in the cost of living, a rate of 96·4 cents would have been required. Actually, immediately prior to the passing of the statute, the rate was 101·9 cents, and by virtue of the four-cent increase awarded by Section 3 of the statute, the rate is now 105·9 cents.

The last increase prior to that of 1950 was effected by an agreement of July 16, 1948, made retroactive to March 1, 1948, which increased all railway wages by seventeen cents per hour. As there has been no wage rate change since that time until that effected by the statute of 1950, both parties accept 101·9 cents, the rate of average hourly earnings in 1949, as the rate established by the agreement of 1948, and as the rate which prevailed until the passing of the statute.

On behalf of the employees it is contended that the above increase of seventeen cents established a standard of living which should be maintained. They say this increase was granted by the railways and accepted by the employees, however unwillingly it may have been done on either side, and that there should be no attempt to go behind the relationship thus established for the determination of the propriety of their present claim.

The railways, on the other hand, strongly contend that such a stand is unsound. The railways say that the situation brought about in 1948 was the result of the threat of a strike and is therefore not to be regarded as a recognition on their part of a proper cost of living-wage rate relationship. They contend that a proper rate should only be arrived at on the basis of

the rise in the index from some period of relative stability, and they suggest either 1939 or the period under price and wage control which ended in 1946.

For the purposes of this arbitration, I am prepared to accept the contention of the employees for the reason that I do not think I can re-try the merits of any dispute which may have existed in 1948, or go behind the situation which was then brought into being. But I think that in considering the situation prevailing in June 1949, at the time of the notice to treat, and subsequently, the proper starting point is the situation existing in June 1948 rather than March. The settlement was in fact made in July, and I think it must be taken that it was designed to take care of the situation then existing in so far as that was disclosed by the information then available. The cost-of-living index figure as of June 1, 1948, namely, 154·3, had then been published.

Acceptance of a contrary view is, I think, excluded by the facts. The employees have filed an exhibit which shows that, on the basis there given, namely, that a rise of one point in the cost-of-living index calls for an increase of forty cents per week, the new rate set in July had already fallen behind the increase in the index since March by $2.44 per week or five cents per hour.

I do not think it reasonable to assume that the parties dealt on any such basis, but rather on the basis of the existing situation as it was then known. The dating back to March 1, 1948, may well have been to compensate, to that extent, for some such factor as the time occupied in reaching agreement, or it may be for other reasons.

It may be well to point out here that the basis of forty cents per week used in the employees' exhibit above referred to, is purely arbitrary, as the amount required to keep any given wage rate on a parity with increases in the index is a mathematical problem. The amount required, based on the wage rate of 101·9 cents existing in June 1948, is ·66 cents per hour or 31·68 cents per week for each point rise in the index. This, however, does not affect the point under discussion.

At June 1, 1949, the index stood at 160·5, a rise of 6·2 points from June 1948, which called on the former date, for an increase in the wage rate of four cents per hour. An increase of seven cents would not have been called for until approximately June 1950, when the index had reached 165·4. There are other factors which call for consideration.

That that is so is pointed out by the fact that on August 10, 1950, the railways offered and the employees rejected an increase in hourly rates of eight and one-half cents because of the request for the early establishment of the five-day, forty-hour week, now made statutory.

When the new work week comes into effect, the hourly wage rates of the employees will be increased by 20 per cent, i.e. by 20·38 cents in the case of the average rate of 101·9, to which is to be added the statutory increase of four cents, making a total of 126·3 cents.

For the bulk of the employees, the change to the forty-hour week will not in itself result in any increase in *weekly* earnings, but rather in a slight decrease, although for some 20,000 back-shop workers there will be an actual cash increase of $4.80 per week. The decrease above referred to arises from the manner in which both the railways and the employees agree the hourly rate consequent upon the reduction in the standard work week is to be calculated. It is agreed that the 20 per cent increase to maintain earnings is to be applied to the rate, 101·9 cents, in force immediately before the statutory increase of four cents went into effect, thus increasing that figure by 20·38 cents, to which the four cents is then to be added. The new rate, therefore, becomes 126·3 cents. The present rate is 105·9 cents. If it were increased by 20 per cent, the new rate would be 127·1 cents. The difference between the two on a weekly basis is 32 cents, the decrease in question.

On the other hand, the present hourly rate for the back-shop worker is 126 cents, the same rate as prevails in the case of the running shops. The latter, however, work the full forty-eight hours, earning $61.49 as a consequence, while the former have for many years worked only forty-four hours for a weekly wage of $56.36. When the conversion to the new standard work week occurs for both employees, it will be necessary that both classes working the same number of hours should receive the same weekly wage. The new weekly wage in the case of the running shop worker, calculated as explained above, will be $61.16, to which level it will be necessary to bring the back-shop worker, by increasing his weekly wage by $4.80. The shortening in hours worked of all employees, on the basis of average hours worked in 1949, namely, 47·1, the latest figure available, will amount to 7·1 hours per week. Actually, it is eight hours for the bulk of the employees, but four in the case of the back-shop workers and part of the clerical staff.

To show that they have not done as well as others in the matter of wage rates, the employees refer to a table of "Index Numbers of Wage Rates in Canada by Industry, 1941-1948" to be found at pages 1208-1209 of the LABOUR GAZETTE for October 1949. The index base is the figure 100 established in 1939. The employees seek to compare the index number for steam railway wage rates in 1948, namely, 170·2, with the general average for all industry, namely, 195·8, and they contend that

> these figures show glaringly that railway workers have not done as well as many others.

The table above referred to, however, cannot be used for the purpose for which it is sought to be used. This table merely shows the percentages of increase in particular industries and in the average for all industry since the year 1939, but unless the relation existing between wage rates in 1939 is known, it is quite impossible to use the table to establish that a greater percentage increase since then in one industry than in another establishes a state of deficiency in the latter. In other words, an industry already paying a high rate in 1939 might well not show as great an increase by 1948 as an industry in which the rate paid in 1939 was low.

It might also be pointed out that if one may disregard the fact that the average rate figures of the railway employees which have been used in this arbitration include overtime as well as straight time, a fact which should not affect the result too greatly, the index now prevailing in the case of the non-operating railway workers would be 184. Taking into consideration the effect of the forty-hour week, it becomes 219. In the meantime, no doubt, the overall index will itself have increased beyond 195·8. The whole of this discussion is, however, not helpful. Resort to the table for such a purpose as the above merely produces a misleading impression.

However, the position of the railway employee in comparison with comparable employment in outside industry, on a proper basis of comparison, is useful, and it will be convenient at this point to examine that situation. In so doing it is necessary to have resort to average figures, and I should say a word in that respect.

During the course of the hearings, when discussion was proceeding on the basis of the average wage rate of the railway employees here in question, I asked to be furnished with information as to the scale of wages actually being paid, as an average figure, of necessity, indicates that numbers of employees are receiving less and others more than the average, and I wished to have before me the actual rates. That information was supplied and is embodied in Schedules I and II hereof.

In subsequent submissions in writing filed by the employees, it is said that.

> Our basic objection to this is that a dispute of this sort, involving a large request based on increased living costs, cannot be the subject of a solution by averages. First, of course, in order to establish the railway average wage, 105·9 cents now and 126·3 cents when the five-day week becomes effective, there have to be many rates higher and many lower than the average. There are now many thousands getting from eighty-five to ninety-five cents per hour. It is no help to them and their families to say that the average railway wage is 105·9 cents and that some are getting higher. And there has already been discussion of the impracticability of increasing some rates of pay and not others, not only because of the equal impact on all wages of the cost-of-living increase, but because long established differentials would be disturbed. These differentials are not just haphazard. Behind them are years of experience and adjustments, decisions of several conciliation boards and wage decisions of the War Labour Board. They represent a sort of scientific wage rate relationship based on many factors —job content, degree of responsibility, hazards, etc.

Had either of the contending parties adduced any evidence enabling me to say that the wage rate in the case of any particular classification of railway employee was insufficient, from the standpoint of maintaining a reasonably proper standard of living, or in comparison with current rates in outside industry, or for any other reason, I should have been quite prepared to deal with it and to make any adjustment such evidence called for. The employees' case, however, has not been put that way. What is asked for is the same increase in cents per hour for all classifications of railway employees. There is no basis upon which such a case can be dealt with that I know of, or which has been suggested, apart from the use of average figures. Indeed, both sides have had resort to them. The very exhibit to which I have already referred, which was filed on behalf of the employees for the purpose of showing the extent to which the railway wage rate had lagged behind the cost-of-living index, uses for that purpose the average rate of 101·9 cents of railway

employees in June 1948. Similarly, the table from the LABOUR GAZETTE, discussed above, also adduced in evidence by the employees, uses average figures and nothing else.

To employ the average rate to ascertain to what extent wages have kept pace with the rise or fall in the cost-of-living index, is in fact to do in one operation the same thing as would be required if the wage rate for each classification of employee were considered separately. The real incongruity comes in if the increase in cents per hour, indicated by the use of the average figure, is applied to the wage rate of each classification without discrimination. It is clear that in the case of a rate, say, of 75 cents per hour, a smaller absolute increase is required to keep it in line with any given upward rise in the index, than in the case of a rate of $1 per hour. Accordingly, to apply the same cents per hour increase to both, as the employees themselves ask, is to favour the lower paid employees at the expense of the higher paid classifications.

The only information which I have been given as to rates of particular classifications of railway employees in comparison with rates prevailing in outside industry for similar occupations, was submitted by the railway companies. This is set out in full in Schedules V and VI, to which I shall have occasion to refer more particularly a little later.

In making a comparison between railway wage rates and rates paid in outside industry, there are certain facts which should be kept in mind. The railway wage structure has been developed by collective bargaining over a long period, and recognized relationships or differentials of the character referred to by the employees above have been established between the various occupations.

For the railways it is accordingly contended that any comparison of railway rates with outside rates, to be fair, must proceed on the basis of a comparison between groups of rates rather than merely as between particular rates for individual occupations, as it may be that conditions in outside industry have caused particular rates to be established on a higher level than in railway service. A second consideration is that for a majority of occupations within the railway, rates of pay are uniform across the country, and where differences exist as between different areas, these differences are between eastern and western Canada rather than between the larger and the smaller localities. The railways point out that in outside industry there are marked regional differentials distinct from differences to be found between rates prevailing in large centres and those in smaller centres in the same territory. Therefore, a comparison between particular rates in outside industry in the highest paying locality and rates prevailing in the railway is not to be made if the present structure of railway wage rates is to persist.

The railways also say that there is a third factor concerning the mechanical trades in which, in a number of instances, the work performed is closely comparable to that performed in outside industry. Under the existing railway wage structure for such trades, the railways and the employees, by mutual agreement, have established a uniform rate for the fully-qualified craftsman rather than rates for each trade. It is also said that the railway wage structure makes less provision for grading craftsmen in different trades than is the practice in outside industry, and while the railway mechanic is paid on the basis that he is fully qualified in his trade, he may not be fully employed up to his qualifications and may in fact spend a considerable portion of his time on work that in outside industry would be assigned to a lower grade mechanic. It is said that this has been particularly the case with men upgraded from helpers' positions as a result of shortages of trained mechanics.

All of this merely emphasizes the obvious fact that in comparing railway wage rates with wage rates outside, the comparison should be with those sections of industry in which the nature and variety of employment, the proportions of male and female employees, and the territorial distribution are really comparable. The railway employees here in question are located all across the country in areas where industry is concentrated and where wages generally are high, as well as in less concentrated or agricultural areas where rates are lower, and railway occupations cover a wide range from that of the skilled craftsman to the unskilled labourer, and from the dispatcher to the office boy, the wage structure having been built up by agreement to give effect rather to differences in responsibility and job content than primarily to geographical distribution.

The employees seek to compare the railway wage rate with rates paid in a number of particular industries, namely,

Petroleum and its products
Automobiles and parts
Heavy electrical equipment
Coal mining
Pulp and paper mills
Metal mining
Primary iron and steel
Non-ferrous metal smelting and refining
Agricultural implements

and refer to the fact that the table appearing on page 8 of "Man-Hours and Hourly Earnings" as of August 1, 1950, published by the Dominion Bureau of Statistics, shows twenty-three individual industries, including those mentioned above, paying more than 105·9 cents, the rate presently being paid by the railways. These references are all to "average" figures.

In the first place, this comparison does not take into consideration the effect on railway rates of the forty-hour week already discussed, which, of course, is not yet in effect.

Further, the employees do not state why any of these industries afford a proper comparison with non-operating railway employees, and I do not think it can fairly be said that any one particular operation such as is presented by each of the above references furnishes an adequate comparison when placed beside the railway industry. Left to myself, I do not think that the nature of the work or the conditions involved in the mining of coal, for instance, are comparable to the case I have to consider.

Again, petroleum and its products, apart from other considerations, is not comparable as it is highly localized and does not present the same diversity of occupation as that existing among the non-operating railway employees. As to automobiles and parts, I do not think this industry furnishes an adequate comparison, if for no other reason than that at the present time at least, and for some time past, the industry, by reason of the almost insatiable demand for its product, has been able to pay high wages and pass on increases to the consumer, at the same time maintaining what would appear to be a comparatively high level of profit. Further, the automobile industry has a history not only of high wages but of seasonal lay-offs due to changes in models. There are some seasonal lay-offs in the case of the employees in question here, namely, at ports where navigation ceases in the winter months, and in the western provinces after the movement of the grain is finished, but, by and large, railway employment offers the security afforded by continuity of employment.

Without going through the list in detail, a fair comparison on the basis of the factors already mentioned, is, in my opinion, furnished as nearly as may be, by the group of industries falling under the head of "durable goods manufacturing." That section of industry employs probably a higher proportion of skilled workers than is the case with manufacturing generally, and the proportion of female employees is said, on the material before me, to be about the same as in the case of non-operating railway employees. Generally speaking, women in industry earn less than men, and the proportion of female employees is accordingly an important item in any proper comparison. In 1948 the durable goods industry was used as a basis of comparison for similar purposes in the United States by a presidential board which had to consider problems akin to those arising here.

Of the nine industries particularly mentioned by the employees, all but three, namely, petroleum and its products, coal mining, and pulp and paper mills, are included in the durable goods industry, and of the twenty-three referred to, all but five additional, namely, meat products, rubber products, distilled malt liquor, local transportation and building construction, are also included in durable goods, if I have correctly identified them in the table referred to. The exceptions do not appear to me to be relevant.

The railways point out that the employees here in question do not include its more highly paid employees, namely, the operating employees, and it is said therefore that any comparison is *pro tanto* unfavourable to them if only part of the railway industry is taken into consideration. This is no doubt true, and the circumstance mentioned might well render a comparison which did not take it into account valueless for some purposes. But for use for a purpose such as is here in question, I think the fact which is pointed out does not sufficiently affect the situation as to render inapplicable the proposed comparison.

According to the Bureau of Statistics, the average hourly earnings for 1948 in durable goods were 98·4 cents, while that of the employees here in question were 98·3 cents. This latter figure is due to the existence in January and February of that year of the lower wage rate in operation prior to the increase of 17 cents which came into effect on March 1. As I have already said, hourly earnings after this increase were 101·9 cents. The average hours worked in the durable goods industry in 1948 were 42·3 per week and the average weekly wage $41.62, while in the case of the employees here in question, the average hours worked were 47·7 per week and the average weekly wage $40.68, using the average rate of 85·3 cents per hour in force in 1947 before the increase in rates of 1948. On the basis of 101·9 cents, the rate in effect after the increase, weekly earnings were $48.60. In June 1949, when the employees' notice was given, average hourly

earnings in the case of durable goods had advanced to 106·5 cents, which was also the average for the year.

The latest figure is that for August 1, 1950, when the durable goods rate had advanced to 112·5 cents. The average hours worked in the durable goods industry in August 1950 were 42·7, with weekly earnings of $48.03, as against average hours worked in the case of the railway employees at that time of 47·1 (taking the 1949 average) and average weekly earnings of $47.99.

Both sides have presented their submissions as to what can reasonably be forecast as to the wage rate which will prevail in the durable goods industry in 1951.

The railways point out that the strong upward movement in hourly earnings in durable goods started about June 1946, and that in the fifty months to August 1950, average hourly earnings increased by 37·4 cents or an average of ·75 cents per month. If this rate of advance be projected to June 1951, it shows a figure of 120·0 cents on that date. The railways contend that the period they have chosen as a base for their calculations includes the whole period of post-war inflation since the lifting of controls.

Alternatively they take as a base the first six months of 1950. In that period, average hourly earnings in durable goods rose by 3·0 cents, an average of ·50 cents per month. Projecting this rise to June 1951 gives the figure of 117·5 cents per hour.

The employees criticize both these bases. They contend that the period from June 1946 to August 1950 includes not only the rapid post-war inflation period from April 1946 to September 1948, but also the period described as a period of comparative stability from September 1948 to February 1950. They take the twenty-nine months from April 1946 to September 1948 as the basis of their projection, the average increase being ·89 cents a month. The resulting figure on June 1, 1951, is 121·4 cents.

The employees contend that the base they have used is a much more realistic one than either employed by the railways for the reason that it would appear that a period of rapid rise in the cost-of-living index is in prospect, when one considers the advance in the months February to October 1950 in comparison with that of the first seven months following April 1946, and also because of the trend toward the forty-hour week which the employees say is evident in outside industry and which will push up average earnings.

I should point out that both parties made their projections to September 1, 1951, that being the date the railways were contending should be fixed as the effective date for the institution of the forty-hour week. As I have determined that the date should be June 1, 1951, I have adjusted the respective contentions to that date. My reasons for selecting this date will appear subsequently.

The employees also point out that the rate of 126·3 cents which will come into operation in 1951 for the railway worker as a result of the forty-hour week will continue for the duration of the contract here in question, namely, to September 1, 1952, and thereafter while negotiations for a new contract may be going on, during all of which time they estimate that the rate in durable goods manufacturing will continue to rise, and they project figures for durable goods considerably in excess of 126·3 cents.

Both sides admit that projection into the future on any basis is risky, and as to that there can be no doubt. However, for what they are worth, these estimates of the contending parties as to the comparative situation next June show the durable goods worker in receipt of a weekly wage varying from $49.72 to $51.59, depending upon whether one uses an hourly rate of 117·0 or 121·4 cents. On the other hand, the position of the railway worker as of next June, based upon his present earnings, will be $50.52 for a standard work week of forty hours, the hourly rate being 126·3 cents. On the above basis, therefore, weekly earnings will be much the same, but the railway employee will be working approximately two and one-half hours less per week than his fellow workman in durable goods. In 1948 the average hours worked in durable goods industry were 42·3, in 1949 the figure was 42·5, while in 1950 to August it had become 42·6. In the above computation I have taken the average figure for 1949. According to the annual survey of the Department of Labour, the average normal work week in the durable goods industry in the years 1947 to 1949 inclusive was 45·0 hours, 44·9 hours and 44·2 hours respectively.

It should be kept in mind, of course, that the railway worker now works forty-eight hours for the weekly return shown above. The reduction in hours next June from forty-eight to forty will, however, improve his position very materially and the question arises as to the light, from an economic standpoint, in which this improvement is to be regarded.

In their submissions as to the relation between the cost-of-living index and wage rates, the employees seek to keep separate and distinct the additional three cents per

hour for which they now ask, and the increase in hourly rates occasioned by the institution of the shortened work week with maintenance of present earnings. Their position is that the two are separate and distinct issues, the one being asked for on the basis of increased cost of living, and the other "to conform with changing industrial and social standards relating thereto."

If it could be shown that the pattern exhibited by industry in the country generally was such that the continuation by the railways of a standard other than the forty-hour week was so anachronistic that it should be ignored, the employees would doubtless have made their point. I cannot so find, however, and I shall have occasion to discuss that subject later.

From the standpoint of the railways, the reduction in hours from forty-eight to forty, quite apart from the statutory increase of four cents, will result in payment of 20·38 cents per hour more for each hour of labour performed in the new work week. The increase of 20·38 cents will not, however, *cost* the railways any more money except to the extent that *necessary* labour, formerly done in the forty-eight-hour week, remains undone at the end of the new week of forty hours. This will have to be paid for at the higher rate, and the railway cost may also be increased as the result of the increased rate for overtime. *Prima facie* the railways will have the cost of eight hours of labour at the standard rate to pay for, or 7·1 hours on the basis of the average hours worked in 1949. As to what will be the actual result, the parties are sharply divided. Exclusive of hotel and water transport employees, the railways estimate the annual cost of the forty-hour week at $80,917,900 on the basis of an increase to the full extent of 20 per cent.

The employees contend that this estimate is purely hypothetical and will prove quite exaggerated. They say that

> labour has claimed that with the workers' increased productivity, adoption of new methods of operation, and use of new equipment (such as the diesel engine), the cost of the five-day week will be eliminated entirely within a few years.

They point to a substantial drop in the number of employees in the case of the United States roads in the first seven months of operation in 1949-1950 on the basis of forty hours instead of forty-eight, and they say that, as reported by the American railways themselves, earnings have gone up while operating costs have gone down. It is said that the best information obtainable indicates a figure in the United States of 8½ per cent to 10 per cent instead of the 20 per cent estimate that had previously been made. Published figures, to which the employees refer, show substantial net revenue increases in 1950 over 1949 in the case of American Class I roads. It is contended that such a result indicates that there has been considerable adjustment on the part of the railways to the necessities of the situation and that ways and means have been found of obviating a great deal of estimated expense. The employees therefore say it is reasonable that the same will prove to be the experience of Canadian railways.

The railways contend, however, that it is too soon to draw any conclusion from the United States experience owing to strikes there in 1949, and the curtailment of railway service wherever possible, postponement of inevitable maintenance work and drastic reduction in staffs. It is said that the American railways have been unable to perceive any evidence of increased productivity, except possibly in office work. The railways regard as significant the fact that the New York Central Railroad has recently placed its car shops on a fifty-three-hour week, of which thirteen hours will have to be paid at overtime rates, as well as the further fact that in September 1950 the number of maintenance of way employees increased by 14·26 per cent over the previous year, and maintenance of equipment employees by 16·35 per cent.

The railways also point out that increased mechanization involves increased capital outlay, and that while new equipment may at first require little in the way of maintenance, the day comes when that is no longer true.

With respect to the employees' contention that ingenuity and ability will overcome all that is involved, the railways say that

> we are being asked to accept real expenses on the basis of hypothetical savings that we may be able to make, and that we are also being expected to pledge those savings to wage increases and not to benefits to the shipping public.

Each of the two major railways has had some actual experience of the operation of the forty-hour week on self-contained units either owned or controlled by them, in the United States; the Canadian Pacific with the Minneapolis, St. Paul and Sault Ste. Marie Railroad, of which it is the majority shareholder, and the Canadian National with the Grand Trunk Western Railroad. In the period May to August, 1950 (a period when it is said the immediate reorganization consequent on the introduction of the forty-hour week had been

completed and when expenses incurred due to weather conditions would have less effect on the value of the experience as a comparison with what might be expected in Canada), total disbursements of the "Soo Line" for labour were 8·4 per cent higher than in the corresponding period of 1949. At the same time there was a substantial increase in both net and gross ton miles, accompanied by substantial decreases in man-hours. The "Soo Line" shows also an absolute decrease in both straight time and overtime worked.

The Grand Trunk shows an increase in total disbursements for labour of 9·5 per cent, and a reduction in straight time but an increase in overtime hours of 16·9 per cent, and in overtime compensation of 39·2 per cent. Reports of both roads indicate very substantial economies in operation have been effected.

Whether these two American units are strictly analogous to Canadian railways may well be doubted. They are relatively short lines running through areas with probably denser populations than is the case with the Canadian roads, and they do not have a similar problem to that presented by the area north of Lake Superior. Other distinguishing factors may also exist, as the railways point out in their submissions.

However, I think it may be taken that these examples do, at the present time at least, put considerable substance in the criticism made by the employees of the railways' estimate of cost, whatever the future may prove to be the fact. The employees contend that the examples given bear out the larger experience of the American Class I roads and justify an expectation that the Canadian experience will not greatly differ. Such a result may come about, but whether one takes the experience of the United States Class I roads or that of the two instances in which the Canadian railways have had experience, there is still involved, at present at least, a substantial item of cost to the railways consequent upon the institution of the forty-hour week, even though twenty per cent would appear to be an excessive estimate.

In any event, from the standpoint of the employee, I think it may very well be said that the reduction of the full eight hours is not a matter to be taken into the scales when considering the value of that which he will receive by virtue of the change in the standard work week. In my opinion, the trend toward a reduction in hours of labour generally, which has undoubtedly been taking place, must be taken into consideration, and while that trend has not reached the point of establishing the forty-hour week as the predominant standard, nevertheless, there has been considerable departure from that of forty-eight hours.

The annual surveys of the Department of Labour already referred to, show that in October 1947, 52 per cent of all plant workers in the manufacturing industries of Canada were on a normal work week of forty-five hours or less, while by October 1949, the figure had increased to 63 per cent. In the same period, the number on forty-eight hours had decreased from 30 per cent to 20 per cent. It should also be pointed out that out of a total of 576,477 employees covered by the 1947 survey, only 108,587 or 19 per cent were working on a five-day week of forty hours or less. There were numbers of other employees working on a five-day week but working over forty hours and up to as many as sixty hours. In 1949 the employees on a five-day, forty-hour week or less numbered 178,308 out of a total of 720,249, or 25 per cent.

The result would appear to be that, just as the full twenty per cent should not be taken as the extent to which railway costs will be increased by the reduction in the standard work week, that reduction, from the standpoint of the employee, should be discounted to the extent of the lag, on the part of the railways, behind the social trend toward shorter hours. But after such discount, and allowing for such a matter as increased productivity, there is left, in my opinion, a residue upon which, from the standpoint of the worker, some value should be placed. It is obvious that such value is not capable of reduction to exact mathematical terms.

If a person be given a day in each week to do with as he please, he may use it to increase his earnings by other employment; he may use it for the purpose of performing work for which he would otherwise have to pay someone else; he may employ it in whole or in part to better himself by further training or education; or he may simply accept it for the purpose of leisure. In any of these events, it is "worth" something to him.

The employees here in question have, I think, themselves recognized the principle when, in August last, they refused an increase of 8·5 cents per hour based on continuance of the forty-eight-hour week in favour of a forty-hour week (with maintenance of earnings) plus an increase of seven cents. The difference is only 1·5 cents per hour, but its existence in fact establishes the existence of an economic value to the employee of shorter hours, even although a lower standard of pecuniary return be thereby involved.

In December 1948, the presidential Board to which I have already referred, directed an increase in the existing hourly rates retroactive to October 1, 1948, and institution of a forty-hour week with maintenance of pay to become effective on September 1, 1948.

The employees there concerned, as here, contended that their requests presented two distinct issues which should be kept separate. The Board, however, rejected this contention, even although it was of opinion that the institution of the forty-hour week was overdue in the United States, and that the railroads stood out "as a striking exception" from the "prevailing practice in American industry". As I have already pointed out, this has not been established to be the situation in Canada.

In the course of its reasons, the Board said:—

> Contrary to the contentions of the Organizations, it is not possible to keep the question of a wage increase at this time separate and apart from the increases in hourly rates that will be necessary to maintain 48-hour earnings while working hours are reduced to 40. While the longer work week is an inequitable working condition, reducing it and maintaining present earnings require (an) increased hourly rate; and such increases, in terms of payroll costs, are not different from any other wage increases. These increases cannot be ignored in considering a straight wage increase, although they may amount to less in terms of earnings than the actual percentage rise in the hourly rates.

After pointing out that the employees regarded the forty-hour week as a "must", the Board continued,

> We are persuaded that this is true, but if true, the employees can hardly regard the other requests they have made as equally important. They must be willing to postpone some of the other things they want for the thing that is most important. Certainly they cannot expect as large a wage increase at this time as they might be entitled to if they were not insisting on a 40-hour week.

While this may not express what I consider to be the underlying considerations in the way I have endeavoured to express them, I think the basic reasoning is essentially the same. I should, in any event, have reached my conclusion apart from this decision.

It has been argued on behalf of the railways that whatever provision I should see fit to make within the limits of the proposals, by way of increase beyond the statutory four cents, if I should come to the conclusion that any further increase is called for, the statute excludes any provision by way of a cost-of-living bonus to come into effect in the future. Section 5 (2) which is relied on as the basis for this argument, provides that any increase in rates must be retroactive at least to September 1, 1950. To provide, for instance, that for each point rise in the cost-of-living index subsequent to September 1, 1950, wage rates should be increased by ·66 cents retroactive to the date mentioned would be contradictory of the very essence of such a bonus which is only called into operation at a future time if a situation calling for it develops. On the other hand, if a bonus produces an increase in rates, as it unquestionably does, it must, according to the statute, be dated back and applied to a period during which it was not required. It has also been argued on behalf of the railways that there can be but one "limit" within the meaning of the statute, to the proposals made on each side, and that on the employees' side the limit is the offer of seven cents as of June 1, 1950, as far as rates per hour are concerned. In my opinion, these points are well taken, and the statute must be so construed.

In my opinion, just as the employees have failed to appreciate the economic gain represented by the reduction in the work week, the railways have ignored in their submissions the disadvantageous position of the employees in the period September 1, 1950 to June 1, 1951, with relation to the rise in the cost-of-living index and in comparison with the situation in the durable goods industry, a situation which in both aspects would appear likely to become accentuated as the period progresses. It is the existence of this situation which has prompted me to fix June 1, 1951, the earliest date open to me, as the date for the coming into operation of the forty-hour week. The existence of the situation just referred to has also a bearing on the question as to the extent, if any, to which I should direct either the statutory four cents or any increase thereof, to be retroactive.

The question also arises as to whether there are any considerations relevant to the earlier period between September 1, 1950, and June 16, 1949, when the employees' notice to treat was given, which call for a compensatory provision. The question may be stated in the way of an inquiry as to whether there are any equities in the situation prevailing in the earlier period which, taking into account the normal

processes under the Industrial Relations and Disputes Investigation Act, call for such a direction.

Again, there are a number of factors to be considered. In the first place, the employees' request was not limited merely to an increase of seven cents in hourly rates. It included the five-day, forty-hour week, and both were required to be applied to all employees, including hotel and water transport staffs. The employees made it plain that these terms could only be accepted or rejected as a whole. The answer to the question, therefore, must depend upon whether it was reasonable in all the circumstances for the employees on the one hand to insist on acceptance in toto, and on the other, for the railways to have rejected, without themselves putting into effect an adjustment in wages or hours, regardless of whether or not there would thereby have been left outstanding a residue of the employees' requests.

That the employees did insist on their full claims being accepted or rejected in toto is not a matter in dispute, and it is best shown by the rejection on August 10, 1950, of the railway offer of an increase in hourly rates of eight and one-half cents on the basis of a continuance of the forty-eight-hour standard work week to which I have already referred, as well as by the rejection of the alternative offer of a reduction in the work week from forty-eight to forty-four hours with an increase in hourly rates of 9·2 cents. This latter would have maintained the average weekly earnings under the forty-eight-hour week. The offer of eight and one-half cents would have been a straight increase in weekly earnings.

As already pointed out, the employees' request for an increase of seven cents in June 1949, taken by itself, was not at that time justified on the ground upon which it is put, namely, to preserve the living standard established the year before, and it did not become justified on that basis until a year later.

Further, I do not think it can properly be said that the trend toward a five-day, forty-hour week in Canada had become such that the failure on the part of the railways to accept it was of itself so unreasonable as to call now for a provision of the nature under discussion. I have already discussed the evidence as to that situation.

Also, for reasons which I shall discuss in detail when considering the situation with respect to hotel and water transport employees, I do not think their inclusion in the common settlement, as insisted upon by the employees, was one which ought to have been accepted.

The principle under discussion works both ways, of course, and the question arises as to whether it would not have been proper for the railways, knowing of the existing and increasing impact of the rise in cost of living upon the wage standard set in 1948, to have put into effect on their own initiative some increase in wage rates, without waiting for a complete settlement. I am perfectly well aware that such a course may not be an accepted mode of bargaining in circumstances such as are here in question, but I think that just as the making of excessive claims ought not to be encouraged, the withholding of the granting of that which is proper should equally be discouraged, even though other questions may be left outstanding. There are, however, some relevant facts, not as yet mentioned, which have to be considered.

In 1926, railway revenue per ton mile was 1·04 cents, and in 1949 1·26 cents, the rise being 21·2 per cent. Prior to 1949 and with the exception of 1948, when the figure was 1·18 cents, the 1926 figure was never exceeded after 1930. In the period 1926 to 1949 the wholesale price index rose from 100 to 157, or 57 per cent. During the same period, average hourly earnings of all railway employees as a group increased from 56·8 cents to 111·8 cents, or 96·8 per cent. In 1926 the operating payroll took 45·7 cents of each revenue dollar as against 52·9 cents in 1949. In 1926 net operating revenue of the two major railways was 77·5 millions as against 24·2 millions in 1949. The rate of return on gross investment in 1926 was 2·8 per cent and in 1949 it had fallen to ·72 per cent. In 1948 it was ·73 per cent, in 1947 1·37 per cent, and in 1946 1·78 per cent.

In the first nine months of 1950 a change took place and the Canadian National had a net operating income of $15,772,344 as against a deficit of $7,358,642 in the same period of 1949. The Canadian Pacific also increased its net operating income from $8,503,245 in the same months of 1949 to $20,611,024 in the corresponding months of 1950, a total improvement for both roads of $35,238,765. The higher revenue months of the year, due to lower maintenance work and revenue from the carrying of grain, are the later months, and it is estimated that the net for the full calendar year will be some $74,200,000, made up of $37,000,000 for the Canadian Pacific and $37,200,000 for the Canadian National.

From the standpoint of the fixing of freight rates, the railways estimate the result for 1950, on the basis of what is required by the Board of Transport Commissioners, as follows:—

Estimated net operating income of the Canadian Pacific	$37,000,000
Add charges not allowed for rate-making purposes	6,500,000
	43,500,000
Requirement fixed by Commissioners as a minimum of railway needs	46,000,000
	2,500,000
Allowance for income tax	1,500,000
Total revenue deficiency	$ 4,000,000

When the employees presented their claims to the railways in June 1949, the net earnings from railway operations of the two main systems for the year 1948 had been $23,500,000, a figure which fell short of meeting fixed charges by some $38,000,000 without allowing any provision for improvements or betterments.

In October 1946 the railways had made application to the Board of Transport Commissioners for an increase in freight rates, an increase of ten cents in hourly rates to all employees having become effective on June 1st of that year. This application was strongly contested and it was not until March 30, 1948, that an increase of 17 per cent was authorized, effective April 8, 1948. This was estimated to produce additional revenue of $70,000,000 per annum which it is said was considerably less than the increase in annual operating costs. This was again followed in July by a seventeen cent increase in wages, made retroactive to March 1st.

The railway thereupon made a new application for increased freight rates, and on September 20, 1949, an interim increase of 8 per cent was authorized, effective October 11 following. This was estimated to produce $26,000,000 per annum. In the meantime, costs of materials had again increased. Effective March 23, 1950, a further interim increase of 8 per cent was granted, and on June 16, 1950, this was increased by a further 4 per cent. These increases, however, did not apply to all classes of freight.

It is therefore apparent that at the time of the service of the employees' notice to treat, namely, June 16, 1949, the railways were still in the position of having been afforded no source of revenue to take care of the wage increase which had become effective more than a year before, and that its payment during all that period as well as payment of the ten cent increase during the period June 1, 1946, to April 8, 1949, represented outlays which were completely irrecoverable, as freight rate increases cannot, of course, be retroactive. Payment of the statutory increase for four cents is equally unprovided for.

The employees take the position that whether or not the railways are at any given time able to obtain from the Board of Transport Commissioners authority to increase freight rates, is a matter with which they are not concerned. As put in their submission:—

> It has been alleged that increases in freight rates would be necessary. This we do not know, but we hold to be a matter between the Railways and the Government's regulatory agency, the Board of Transport Commissioners.

The employees say that if they are to be denied warranted wage increases because the railways cannot get necessary revenue, they are in an "economic trap".

One can agree that such a denial would have the effect stated, but this does not establish that no regard can be paid to the fact that payment of the wages of railway employees can come from railway revenue only, the rates upon which they depend being subject to the jurisdiction of the Board of Transport Commissioners. An industry in a position to increase the price of its product without the necessity of considering any outside factor other than the probable effect of the increase on the volume of sales, is in a very different situation from that of a railway subject to the regulative jurisdiction I have mentioned, as well as to competition arising from road, water and air transport. I need not, however, for the purpose of the immediate question under consideration, discuss the matter further than to say that I do not think, in the light of the facts which I have reviewed, it can reasonably be said that the failure of the railways to put into effect an increase in wage rates in the period under discussion was of such a nature as to call for any provision of a compensatory character in respect of that period.

Before expressing the conclusion to which I have come, I think it should be pointed out that some of the evidence put in on behalf of the railways shows that some classifications of railway employees are already in receipt of higher rates than are being paid for similar work in outside industry. Schedules V and VI show the situation to which I refer. In Schedule V there is shown a comparison between certain railway occupations and comparable non-railway employment in the Toronto, Central Ontario and Montreal areas, but the hours worked do not appear. In

Schedule VI, a comparison is made on a monthly basis in the Montreal area, between certain railway clerical help and employees in comparable employment outside the railway.

The employees comment with respect to Schedule V that the examples shown are selective, and that the survey itself was made by a private agency. The question is also raised as to whether or not the rates shown for the non-railway occupations are from organized industry. It is pointed out that the Montreal figures are almost without exception lower than the Toronto figures, and it is said that Montreal is in what is generally considered a low-wage area, while railway wage rates are national in scope, and there are areas where the latter show to considerable disadvantage. It is the fact, however, that the greatest concentration of railway workers is in the Montreal area. Similar objections are raised with respect to Schedule VI and it is pointed out in particular that the latter schedule is confined to the Montreal area. On behalf of the railways the statement is made that with respect to clerical rates, Montreal and Toronto pay approximately equal amounts. Toronto is said to pay more in the case of one or two positions but lower in others, the general effect being as already mentioned.

The objections do not dispose of the evidence afforded by the schedules, and the fact of these higher rates is not denied.

The railways say that the result of past uniform increases in the rates of all classifications of railway employees is in part responsible for the situation disclosed above, and that junior rates in particular have been built up to levels entirely out of line with rates currently established in other industries for that kind of work.

It is also said by the railways that these particular rates have increased from 80 per cent to 100 per cent since 1939 and are now too high to allow a proper spread between relatively unskilled positions and those requiring some knowledge and experience in railway operations. It is said that they have proposed to the employees some modification of these rates, and some modification may come about as a result of discussions with relation to the rules as provided for herein, but the existing fact is as above. It is somewhat incongruous that any increase should be asked for in the case of a cashier already in receipt of $266.89 per month, when the going rate in outside industry is $247.80, and for an elevator operator receiving upwards of $191.89, when the outside rate is $170.

However, the situation thus disclosed is not one with which I have to deal. The existence of such cases merely accentuates the fact to which I have already called attention when discussing the effect of a uniform wage rate increase to all employees based on the existing average rate. To increase a man who is already paid more than he could secure in outside employment is to take from his fellow-employees, whose need is disclosed by the existence of an average rate which is low in comparison with outside industry. It does not increase the expense involved to the railway.

The task involved in coming to a conclusion as to the value which ought to be attributed to the reduction in hours consequent upon the shortened work week is rendered more difficult by the fact that the reduction itself is postponed until next June. This introduces into a calculation, itself incapable of exact measurement, the further uncertainty arising from attempting to estimate the influence of future conditions upon the cost-of-living index.

It would, however, seem from present indications that some continued rise must be contemplated, certainly for the purposes of the problem with which I am faced, even although times are such that existing premises may be invalidated overnight.

The evidence shows that, in a substantial number of establishments in various kinds of industry of recent months, increases in wages have taken place, and if one is entitled to take note of matters of common knowledge, further substantial increases are continuing to come into effect. It is pointed out on behalf of the employees that recent increases in wholesale prices have not yet been reflected in the cost-of-living index which, while increasing from 169·8 on September 1 to 170·7 on October 1, remained stationary at the latter figure on November 1. In the first six months of the current year, the index rose approximately 4·4 points, and by the following month it had risen another 2·3 points. It is also to be remembered that of the term of the contracts here in question, some fifteen months will remain unexpired on June 1 next.

By September 1, 1950, the wage rate-cost-of-living relationship of the railway worker had deteriorated from the 1948 level to such an extent that 10·2 cents per hour was then required to restore that relationship. In other words, the seven cents asked for was already exceeded by 3·2 cents, and this margin, it would appear, will likely continue to be augmented.

Taking into account, therefore, all the factors I have discussed, which enter into the problem of placing a value on the

reduction in hours from the standpoint of the employee, including the necessity of estimating the circumstances which may exist in June next, the present disadvantageous position of the railway employee in relation to the increased cost of living and also with respect to the wage level and hours of labour of the durable goods worker, as well as the probable circumstance that this position will become increasingly disadvantageous, I do not think I would be justified in saying that such value should be set at a figure in excess of that which would permit my awarding the full seven cents which is in controversy. I therefore award that sum. I do not think the award should have any retroactive effect beyond September 1, 1950, however, for the reason that, apart from the considerations I have discussed earlier, I think this award sufficiently takes care, as nearly as one may reasonably say, of any retroactive operation which might otherwise have been proper to give.

In comparison with the projected position of the durable goods worker on June 1 next, the railway employee will be earning $51.72 weekly, at the rate of 129·3 cents for forty hours, while the former will be earning $51 at 120·0 cents per hour, assuming his hours of labour then to be 42·5, a slightly lower figure than obtained on August 1, 1950. The railwayman on this basis will be earning slightly more per week in dollars and cents for 2·5 hours less labour. The respective paths of the two workers have in the past however crossed and re-crossed.

In 1948, before the increase in railway wages of that year, the average weekly earnings in durable goods were $40.93 for a 41·6 hour week, at the rate of 98·4 cents per hour, while the railway employee was earning $40.68 for 47·7 hours of labour, taking as applicable the average rate per hour of 85·3 cents in effect in 1947. As a result of the increase in the year last mentioned, railway earnings increased to $48.60, the hourly rate to 101·9 cents.

By August 1, 1950, weekly earnings in durable goods had risen to $48.03 for a 42·7 hour week, the hourly rate being 112·5 cents, while railway earnings, on the basis of average hours worked weekly in 1949 of 47·1, had decreased slightly. The statutory increase of four cents on September 1, 1950, brought railway earnings up to $49.87 and the hourly rate to 105·9 cents.

While the award of the full seven cents will apparently place the railway worker in a position more advantageous comparatively than has been the case at any of the periods just reviewed, in my opinion, the considerations already discussed call for such an award, and it is to be remembered that, to the extent that past experience may be taken as a guide, the tendency will be for this advantage to be overtaken during the unexpired term of the contracts here in question.

In this award I have not taken into consideration the possibility of earnings being augmented by overtime occasioned directly by the institution of the forty-hour week. Apart from shortage of manpower, which of course may develop, the view of the railways as expressed in the evidence is that overtime "will not normally be the result of applying the 40-hour week."

Hotel and Water Transport Employees

The hotel employees represented in this arbitration are limited to the employees of the hotels of the Canadian National Railways. By reason of an opinion of the Deputy Minister of Justice to the effect that the hotel employees of the Canadian Pacific Railway are not subject to the provisions of the Industrial Relations and Disputes Investigation Act, these latter did not become parties to the negotiations which were in progress on August 21, 1950, as did the employees of the Canadian National Railways. It is only to employees who were parties to such negotiations that the terms of the statute, as provided by Section 8 (*a*), apply. By reason of Section 3, the hotel employees here in question received the four cent per hour increase in common with the other employees of the railway.

These employees contend that the hotels are operated by the Canadian National Railways as a component part of the railway undertaking. It is pointed out that many of the services for the railway proper, such as laundry, baking and purchasing for the dining cars and sleepers, are done by the hotels, while the railway offices in turn perform services for the hotels such as ticket agents acting as hotel booking agents. The employees also point out that in the past, notably in 1946 and 1948 as well as during the depression years, they received not only the same general advances but the same deductions as the other employees of the railway. It is accordingly contended that these facts justify their being now included in any adjustment of wages or hours which may be called for in the case of the other employees of the railway.

In any event, the employees say that the basis of their approach to the railways, as far as proposed wage increase was concerned, was simply an amount to help compensate for increased living costs which have had equal impact on all classes.

whether employed on the lines of railway, in the water transport service, or in the hotels.

On the other hand, the railway contends that there is no basis for including hotel employees in every wage and hours adjustment that may be called for in the case of employees engaged in the operation of the Railway proper. It is said that hotel work is not comparable to that involved in the running of a railway, and the mere fact that a railway company also owns a hotel does not bring about any change in the character of the business conducted or of the work performed with respect to the hotel.

As to the fact that increases or deductions have from time to time in the past been given to hotel employees in common with other employees, it is contended that this does not establish a precedent or lay down a principle calling inflexibly for similar treatment at all times. With respect to this aspect of the matter, the railway says that the increases which were granted following the depression years were called for from the standpoint of all employees as the wages of all had become depressed. It is pointed out that during the war the government adopted the policy of a cost-of-living bonus which applied to all employed persons in Canada. The railway points, however, to the fact that the National War Labour Board in 1944 held that, while a case had been made out for an upward adjustment in the wages of railway workers proper, it was at that time unable to find grounds on which a similar award could be made in favour of hotel employees, the board being of the opinion that those employees formed part of an industry distinct from the railway industry, and that their wages should be related to wage patterns established in such other industry.

The railway also says that the participation of its hotel employees in the general increase granted to all its employees in 1946 was the result of agreement and was justified by the then conditions, but that with regard to the inclusion of the hotel employees in the general increase of seventeen cents in 1948, it was in the circumstances that

> When a settlement was finally being negotiated with the active participation of the Government, practically at the deadline hour for a strike, there was no opportunity to point out the grave difficulties that were being created in hotel operations. Actually, however, the economic power of the railway employees was used to impose a settlement of an increase of 17 cents per hour, or $35.36 per month, not only for railway employees but also for hotel employees. The result of this last increase has been that the rates of the railway hotel employees are entirely out of line with those of the rest of the hotel industry.

During the course of these hearings, I asked the representatives of the employees why an owner of a hotel, who has no connection with any railway and who is already paying wages in line with the highest wages paid by any other hotel of similar standing in the same community, should be asked to increase the wages he is paying, merely because the railway which serves that community has increased its wages. I received no satisfactory answer to that question, and no adequate answer presents itself to me. In my opinion, with respect, the view upon which the ruling of the War Labour Board in 1944 would appear to have proceeded should be adopted here. Apart from such ruling, I should have reached the same conclusion.

The hotel industry, being a separate industry from that of the operation of a railway, mere common ownership cannot, in my opinion, bring about any identity between the two. To accept such a principle would mean that a railway acquiring a coal mine, for example, because it conceives there will be some advantage through its ownership of the mine, would be obliged to increase or decrease the wages of the coal miners with every increase or decrease in the wages of the railway employees proper, or vice versa, notwithstanding that the considerations dictating a particular change in the case of the one were not present in the other. I do not think such a principle can stand examination, and I am therefore unable to accept it.

Further, wage rates in connection with the operation of a railway are, as has already been pointed out, national in scope because of the fact that the railway operates in all areas of the country. That consideration does not apply to the wages paid in a particular hotel or hotels. There seems to be no reason, for instance, why wage rates which would be called for in the case of a hotel operated in such a city as Toronto where the cost of living is high, should automatically apply in another locality where the cost of living may be substantially lower. To fix wage rates of hotel employees with regard to rates prevailing in railway operation rather than with regard to those prevailing in the hotel industry, having regard to all relevant considerations pertaining to the latter, such as the level of wages paid in comparable hotel operations, would or might place the

railway hotel at a distinct disadvantage to the non-railway hotel, or be unfair to the travelling public. However that may be, in my opinion, the employees' contention is not sustainable.

I do not think that the fact that the cost of living has advanced since 1948, affecting hotel employees in common with others is a ground upon which I can proceed, in view of the evidence before me as to the rates which are actually in existence.

The railway has adduced evidence as to the level of wages paid non-railway hotel employees. This evidence shows in the first place that at December 1949, the average hourly earnings of employees in Canadian National hotels were 75·7 cents as compared with 58·7 cents in other hotels and restaurants not railway owned, a difference of some 30 per cent. Since that time, the railway hotel employees have received an increase of four cents per hour, bringing the average rate up to 79·7 cents, while the rate for non-railway hotels and restaurants as at August 1, 1950, was 61·0 cents per hour.

The employees do not deny these figures, but they say that the comparison is not a proper one as it is with rates paid in various classes of hotels throughout the country, whereas the railway hotels are in a class by themselves and in a position to secure much higher rates from the travelling public. Correspondingly, they call for a type of employee of greater ability and more responsibility than in the case of other hotels.

The railway has, however, adduced evidence as to the actual rates paid in each of its hotels and the rates paid in other first-class hotels in the same or comparable communities. The comparison generally indicates much higher wage rates in the railway operated hotels. In one instance, pointed out by the employees, the rate paid for a particular classification of employee in a non-railway hotel is shown to be slightly more than that paid by the railway hotel, and it is said that the non-railway hotel rate is actually higher because that hotel could not obtain that particular type of employee without paying a higher rate. This was the only instance commented on by the employees, and it cannot affect the conclusion to which one is forced upon an examination of the evidence as a whole. I do not think that, the rates now paid in the various railway hotels being substantially higher than those in other comparable hotels, a case for a further increase has been made out. Effect must be given to the undoubted fact that the employees in railway operated hotels could not do better nor perhaps as well if they sought employment in non-railway operated hotels. There is the added consideration that the employees of the railway operated hotel receive benefits in the form of pensions. Evidence as to what pensions, if any, are paid in non-railway hotels was not given.

As in the case of the railway employees proper, no argument has been presented by the employees from the standpoint of the inadequacy of the rate paid to any particular classification of hotel employee. The case has been on the basis of the same increase for all.

The result to which all of the above leads might be otherwise if the earnings of the hotels here in question justified an upward revision in wage scales, but that is not the case. Since 1939 the railway hotels show a loss of some $500,000 if an allowance of 3 per cent on investment is made, during which time room rates have gone up $2 and wages of employees, with the exception of males under twenty-one and certain females, have increased by 43 cents per hour, or $88.57 per month.

With respect to the forty-hour week, no case for its institution from the standpoint of the hotel industry was attempted by the employees, and it has been shown that it is not as yet in operation in any hotel in Canada. I do not think, in these circumstances, there is any basis upon which I can be asked to direct the institution of the forty-hour week. Such an order could not affect the hotel employees of the Canadian Pacific, and considerable confusion would result from such an order.

The basis of argument with respect to the water transport employees is essentially the same as that in the case of the hotel employees.

The number of water transport employees here involved comprises 1,174 employed by the Canadian National Railways and 1,803 employed by the Canadian Pacific Railway, a total of 2,977. These represent a small minority of the total water transport employees of the two companies. The water transport operations in question are services on the Pacific Coast, the bulk of the business being local and subject to competition by an independent operator, and there is also involved a water transport service on inland lakes in British Columbia. This latter is said to be subject to increasing road competition.

The history of the inclusion of this group of employees with all employees of the railway in past general increases or deductions is the same as in the case of the employees of the railway hotels, and the contending points of view as to the results

which should follow therefrom I have already discussed in connection with the hotel employees.

The railways contend, as in the case of their hotels, that their water transport operations constitute a separate industry, and any adjustment of wages or hours ought to be considered from the standpoint of the water transport operations rather than bulked with railway operation proper. The financial experience of the two companies with respect to their water transport operations is as follows:—

CPR

	Deficit	Net Earnings
1946		$ 576,678
1947	$ 617,465	
1948	852,076	
1949		401,001
1950 (Jan. 1-Sept. 30).		475,001
	$1,469,541	$1,452,680
Deficit		$16,861

CNR

	Deficit
1946	$ 47,616
1947	152,427
1948	194,352
1949	314,298
1950 (Jan. 1-Sept. 30).	72,160
Deficit	$ 780,853

The employees contend that the railways have gone into the hotel and water transport business and that, as a result, these two groups must be considered as "railway" employees. They say that the whole is but one undertaking, and neither is to be separated from the other. They emphasize the fact of "through" traffic and point out that the group of water transport employees include shore staffs as well as floating personnel, and they contend that the classifications of floating and shore staffs have their counterparts in railway personnel proper. In any event, the employees' fundamental contention is, as before, that of the cost of living, and they contend that this precludes any differentiation in the case of these employees. With respect to the five-day, forty-hour week, they contend there is no factor which militates against its application to these employees any more than to the others.

It can be argued in favour of the employees' position that, after all, water transportation is merely part of the business of transportation by rail and water, and that the employees of both are really engaged in a common operation, and there are circumstances in which such a contention would, in my opinion, be sound. Perhaps a good illustration would be afforded where the water transportation is a mere link between two parts of the rail system. The employees really put their case on this ground, as they referred to the ferry services between New Brunswick and Prince Edward Island, and across the Straight of Canso, as comparable. I think, however, that these illustrations rather point up the distinction which, in my opinion, is manifest. The coast services do not constitute a mere link in the rail service as the bulk of the business handled is local and there is competition on the part of a local independent operator.

Such an operation, therefore, must stand on its own feet, and must be considered a separate industry. I think the inland lake operation, by a parity of reasoning, cannot be considered as an integral part of the operation of the railway.

As has already been pointed out in connection with the consideration of matters affecting employees of the railway proper, the railway rate structure is national in scope, and considerations which may dictate changes therein are not necessarily operative in a purely local operation. A wages and hours structure proper and adequate on one coast might be quite inappropriate on the other coast where local conditions such as prices, traffic available, or presence or absence of competition may be different.

During the hearings, it occurred to me that in the case of the shore staffs, the fact that some categories of employee perform essentially the same work as that performed by a number of classifications engaged in connection with the railway, who work in fairly close physical proximity to the former, would warrant identical treatment, but on reflection I have come to the conclusion that that is not so. To do so would be contrary to the principle discussed above and would necessitate dealing with particular classifications of employee rather than with the water transport staff as a whole. This cannot be done intelligently as I have no evidence which enables me to deal with the rates of particular classifications. No evidence was given to indicate that the present scale of wages being paid the water transport employees is lower on the average or in any instance than is being paid elsewhere in the area, nor lower than it ought to be, having regard to all relevant circumstances in the area.

Again it is to be remembered that not only are the water transport employees here represented a small minority of the total water transport staffs of the two major

railway companies, but also an even smaller minority of the employees of the water transport industry. This is an added circumstance which would prevent any intelligent treatment of particular classifications.

Findings

I therefore direct that—

1. With respect to employees other than hotel and water transport employees:
   (*a*) the four-cent increase in wage rates provided for by Section 3 of the statute be increased by a further three cents, the resulting seven cents to be effective from the day fixed by the said section.
   (*b*) the five-day, forty-hour week here in question shall become effective June 1, 1951, and the terms of Exhibit 28 shall apply thereto, provided that from the said date to and including August 31, 1951, straight time only shall be payable up to forty-eight hours per week.
   (*c*) each agreement shall contain clauses in the terms of Exhibits 27 and 30.
2. With respect to hotel and water transport employees, the term of all agreements to which they are parties shall be for one year from September 1, 1950.

As to any matter requiring to be dealt with for the purpose of concluding all agreements in question in this arbitration, with which I may not have dealt or may not have dealt completely, I shall dispose of upon the same being brought to my attention.

(Sgd.) R. L. Kellock.

Ottawa, December 18, 1950.

APPENDIX "A"

The parties were represented as follows:—

G. R. Pawson, Commercial Telegraphers Union of North America.

H. A. Stockdale, Brotherhood of Railroad Signalmen of America.

Keith Cockburn, International Brotherhood of Electrical Workers.

A. R. Mosher, T. McGregor, W. J. Smith, Canadian Brotherhood of Railway Employees and Other Transport Workers.

T. J. Clark, Brotherhood of Express Employees.

W. H. Phillips, Order of Railroad Telegraphers.

W. Aspinall, Brotherhood of Maintenance of Way Employees.

F. H. Hall, Brotherhood of Railway and Steamship Clerks.

J. T. Galloway, International Brotherhood of Blacksmiths, Drop Forgers and Helpers.

G. E. Schollie, International Association of Machinists.

J. Connolly, United Association of Journeymen and Apprentices of the Plumbing and Pipe Fitting Industry of the United States and Canada.

R. Melancon, Brotherhood of Railway Carmen of America.

Sam Finlay, International Brotherhood of Boiler Makers, Iron Ship Builders and Helpers of America.

A. E. Payne, Sheet Metal Workers International Association.

R. Y. Menary, International Moulders and Foundry Workers Union of North America.

J. W. Lebeau, International Brotherhood of Firemen and Oilers, Power Plant Employees, Roundhouse and Railway Shop Labourers.

A. R. Johnstone, Hotel and Restaurant Employees and Bartenders International Union.

Schedule III

FACTS ABOUT THE CANADIAN PACIFIC RAILWAY'S PENSION PLAN

From January 1, 1903, to December 31, 1936, voluntary pensions were granted without contributions by the employees. Due to changed conditions it was necessary to establish a contributory plan effective January 1, 1937, the main provisions being as described briefly hereunder:—

1. *Eligibility*

All regular employees under age 40 on date of entry into the service. If entry was after January 1, 1937, membership in the Plan is compulsory.

2. *Employees' Contributions*

Each participating employee makes contributions equal to 3 per cent of salary or wages.

3. *Company's Contributions*

The Company bears the full cost of service prior to January 1, 1937 and the greater part of the cost of service after that date.

4. *Selection of Type of Pension*

A contributor may select either of the following:

(*a*) A pension payable to himself only.

(*b*) A joint and survivor pension. This is a reduced allowance to pensioner, one-half of which would be payable to surviving wife or dependent.

5. *Calculating Service*

One month allowed for each calendar month in which some service was performed, twelve such months being equal to a year of service. From January 1, 1937, however, only those months are allowed in which contributions were made.

Periods of absence to serve the cause of the Allies during World Wars I and II included at Company's expense.

6. *Calculating Pension*

Years of service multiplied by 1 per cent of average monthly pay for 10 years preceding age 65, or for the last 10 years if retired before that age.

7. *Normal Retirement*

Normal retirement age is 65 years, but retention beyond that age may be allowed under certain conditions.

8. *Early Retirement*

(*a*) If retirement occurs between the ages of 60 and 65 years, due to disability, an allowance may be authorized by the Pension Committee.

(*b*) If retirement occurs under age 60, in special circumstances an allowance may be authorized by the Pension Committee, subject to approval by the Board of Directors.

9. *Refund of Employees' Contributions*

Contributions are refunded where service definitely terminates before retirement. In the case of a contributor's death, refund is made to his legal representative.

Where death of a pensioner occurs before total pension payments equal the amount of contributions made, the difference is paid to his legal representatives.

10. *General*

Minimum pension is $30 monthly except in the case of non-contributors who entered the service after January 1, 1912, whose annual allowance is equal to $14.40 for each year of service subsequent to his last entry into the service and prior to January 1, 1937.

As a further temporary measure, where the allowance is in an amount less than $45 monthly, the Company, effective from June 1, 1948, is providing out of its own funds, and without effecting a change in the minimum allowance payable under the pension rules, a supplemental allowance of $5 monthly to all pensioners under seventy years of age, in receipt of amounts between $30 and $40 monthly, and in the case of pensioners receiving more than $40 monthly and less than $45 monthly, the supplemental allowance is provided in an amount sufficient to bring the total payments for pension and special allowance up to $45 monthly.

There are approximately 70,000 members of the pension plan and presently some 11,000 pensioners are in receipt of allowances, the average pension amounting to $62.60 monthly.

Total pension payments from January 1, 1903 to December 31, 1949 amounted to $75,223,000. In the year 1949 payment for pensions amounted to $7,600,000 exclusive of levies in respect of employees covered by the United States Railroad Retirement Act. In addition, to assist in providing for increased pensions, the Directors authorized an increase from $1,750,000 to $3,000,000 in the annual contribution by the Company to the Pension Trust Fund.

The contributory pension plan is administered by seven members, four of whom are officers of the Company (the Vice-President, Finance, being Chairman) and three who are elected triennially from among the General Chairmen of the organized classes of employees of the Company having agreements with it, by a majority vote of such General Chairmen.

Schedule IV

INFORMATION ABOUT THE CANADIAN NATIONAL RAILWAYS' PENSION PLANS

The amalgamation (so-called) of the principal lines of railway (Grand Trunk Railway, Grand Trunk Pacific Railway, Canadian Northern Railway, Canadian Government Railway) which form the system now known as Canadian National Railways took place early in 1923. On a large part of the new system no pension plan had been adopted, since the Canadian Northern and the Grand Trunk Pacific had barely emerged from the construction stage and had few employees of retiring age.

There were two contributory pension plans in operation—one (of limited application) on the Grand Trunk (Grand Trunk Superannuation and Provident Fund Association) which, however, had been closed to new employees in 1907—and one on the Canadian Government Railways (Intercolonial and Prince Edward Island Railways and National Transcontinental Railway) which was closed to new entrants in 1929. The Grand Trunk Superannuation Association now has 12 contributing members and 143 drawing pensions. More will be said about the Canadian Government Railways' plan, the proper name of which is the Intercolonial and Prince Edward Island Railways Employees' Provident Fund. On the Grand Trunk, a new non-contributory plan had been put into operation in 1908 applicable to all employees excepting those who remained members of the contributory plan above referred to.

The 1908 Grand Trunk plan provided, subject to prescribed age and service qualifications, that the company would pay to the employee, on retirement, a pension of 1 per cent of his highest average wage or salary during any ten consecutive years of his service multiplied by the number of years of service. For example, an employee who had forty years' service and whose highest average annual compensation during a ten-year period amounted to $1,000 would receive 40/100 of $1,000 or $400 per annum.

After the amalgamation, steps were taken to resolve the many problems arising therefrom, and it was several years before a comprehensive pension plan for the new system was written. In the interval, as an expedient, the Grand Trunk plan was applied to retiring employees who were not otherwise provided for.

On August 1, 1929, the Canadian National pension plan came into force. Except for a few small details, the plan was the same as the Grand Trunk plan. The Canadian

Government Railways' contributory plan was concurrently closed to new entrants; in other words, after the general plan was adopted, all new employees were subject to the rules and regulations of the new plan.

A few years later, a review of the experience under this non-contributory plan created some concern that the Canadian National System could not continue to stand the growing cost of a pension scheme of that type. As a result of studies made, the present Canadian National Railways' pension plan became effective on January 1, 1935. This plan provided for a cut-off between the old and the new plan as of that date. With respect to employees in the service on that date, who entered the service before attaining the age 50, and who had more than 10 years' service prior to December 31, 1934, the company undertook to pay them if they remained in service to pension age, an amount calculated on the basis of the old plan, i.e., 1 per cent of the employee's highest average compensation during any ten consecutive years to January 1, 1935, multiplied by the number of years of service to that date. This is called a *Service Pension*. To those who had less than 10 years' service on January 1, 1935, and to employees who entered the service after that date, the company undertook to pay them a pension, without any financial contribution by the employee, of $300 per annum, provided the employee remained in the service until reaching pension age. This is called a *Basic Pension*.

It was also provided that an employee having ten years' service might augment his service or basic pension by contributing to the pension trust fund, such contributions to be any even percentage from 1 per cent to 10 per cent of his salary or wages. The company undertook to match such contributions up to but not exceeding 5 per cent. The pension resulting from these joint contributions is known as a Supplemental Annuity, and in determining the employee's gross pension, is added to the service or basic pension. Contribution is not compulsory.

With respect to employees entering the service after January 1, 1935, the age limit for pension eligibility was reduced from fifty to forty-five. Effective January 1, 1947, the ten-year service requirement for contributions was waived except that the company's matching contribution does not commence until the 11th year of service.

For convenience, a summary of the salient features of the present general pension plan is given hereunder:—

Commenced—January 1, 1935.

Employee Contributions—Optional up to 10 per cent of total wages.

Company Contributions—Matching up to 5 per cent after 10 years' service, plus basic or service pension.

Refunds of Employee Contributions—With compound interest. Rule 44 with compound interest in case of death.

Qualifications for Pension—Age 65 with 20 years' service (15 years if entered service prior to January 1, 1935).

Qualifications for Disability—Age 60 years with 20 years' service.

Qualifications for Voluntary early Retirement—Age 60 with 35 years' service (Age 60 with 30 years' service at reduced rate).

Types of Pensions—Straight Life, Joint and Survivor, or Guaranteed.

Basis of Pensions

Service Pension

(*a*) With 10 or more years of service prior to January 1, 1935—1 per cent for each year of service of best 10 years' average to December 31, 1934, minimum $25, also supplemental annuity and additional service pension referred to in (*c*) and (*d*) below.

Basic Pension

(*b*) Employees not covered in (*a*)—$25 per month, also supplemental annuity referred to in (*c*) below.

Supplemental Annuity

(*c*) The product of employee and company contributions with compound interest, converted into an annuity based on approved actuarial tables.

Additional Service Pension

(*d*) If service pension, together with the supplemental annuity purchasable by a 5 per cent matched contribution, does not equal 1 per cent for each year of service of last 10 years average, the difference is made up by the Company. This provision compensates an employee who was a member of the previous plan, in respect of possible reduction in his pension under the new rules as compared with what it would have been under the old rules.

Example

Male employee, salary $100 per month, who contributes $5 per month to age 65 throughout the entire period of service, with compound interest at 3 per cent, pension expressed as a straight life annuity.

Years of Service	(a) Basic Pension	(b) Supplemental Annuity	(c) Total Pension
20	$25	$20.16	$45.16
25	25	28.96	53.96
30	25	39.15	64.15
35	25	50.97	75.97
40	25	64.67	89.67

A pension, where salary is $175 per month with 5 per cent contributions, would be Column B x 175 plus $25.

100

A 5-year guarantee is 96·02 per cent of Column C; 10-year is 86·48 per cent; 15-year is 75.32 per cent; and joint and survivor (both age 65) is 72·91 per cent of Column C.

The Intercolonial Provident Fund, hereinbefore referred to, has (December 31, 1949) 5,091 contributing members and 3,155 drawing pension. The principal features of the plan are as follows:—

Commenced—April 1, 1907.

Entry age limit—35 years if inexperienced in railway work; 45 years if experienced or if professionally employed.

Employee Contributions—1½ per cent of wages.

Company Contributions—Matching, with a limitation of $100,000 per annum.

NOTE: The fund having been insolvent for many years, the Company has had to make up the annual deficit which, for the year 1949, was $3,002,888.

Refunds of Employee Contributions—Total contributions on severance by company for other than misconduct; 90 per cent in case of death; both without interest.

Qualifications for pension—Age 65 with 15 years' service.

Qualifications for disability—15 years' service.

Qualifications for voluntary early retirement—Age 60 with 35 years' service.

Type of Pension—Straight Life.

Basis of Pension—1½ per cent for each year of service of last 8 years' average earnings, minimum $30 per month, maximum ⅔ or 8-year average .

During the year 1949, a total of 15,671 persons received pension allowances from the Canadian National Railways. The total pension costs were $12,705,434, which includes $2,474,460 as provision for pensions which will be paid subsequently. Of the total cost, $11,562,547 was assumed by the Company.

Collective Agreements and Wage Schedules

Recent Collective Agreements

A file of collective agreements is maintained in the Economics and Research Branch of the Department of Labour. These are obtained directly from the parties involved and through the Industrial Relations Branch of the Department. A number of those recently received are summarized below.

Agreements made obligatory under the Collective Agreement Act in Quebec are summarized in a separate article following this.

Mining

Metal Mining

SCHUMACHER, ONT.—MCINTYRE PORCUPINE MINES, LIMITED AND PORCUPINE MINE WORKERS' UNION, LOCAL 100 (CCL).

Agreement to be in effect from July 1, 1950, to June 30, 1951; either party may, on 10 days' notice, require the other party to enter into negotiations for the renewal of the agreement within the period of 2 months prior to the expiry date. The company recognizes the union as the sole and exclusive collective bargaining agent for all eligible employees. There will be no discrimination, intimidation, or coercion because of an employee's union or non-union affiliation.

Hours: 8 per day 6 days per week, except where by established practise certain groups of employees work a longer shift for 5 days and a shorter shift on the sixth day, a 48-hour week in either case, with the exception of some surface workers. *Overtime:* time and one-half for all work in excess of the normal working hours, double time on 4 specified *paid holidays*.

Vacations with pay: after one year's continuous service one week, after 5 years' continuous service 2 weeks.

Hourly wage rates for certain classes: mining department—shaft leaders $1.28, shaftmen $1.13, shaft inspectors, steel and bit-man, drill repairmen, diamond drill runners $1.09; machine men, muckers-leaders, mucking machine operators, chute blasters, timbermen, trackmen, pipe-fitters, car repairman (underground), motormen, scalers, grizzlymen, ore-pass-men, waste-pass-men, crushermen, skip tenders, cage tenders, powdermen, sanitation men, lamp servicemen, samplers, trammers, fuse cutters and tamping men (surface), ventilation maintenance men, saw filers $1; slusher maintenance men, cagers $1 to $1.05; helpers, nippers, deckmen 93 cents; timber yard and treating plant—treating plant operator, sawyer $1.09; butt sawyer, timber framer $1; timber handlers 93 cents; gas locomotive operator 93 cents, helper 87 cents; labourers 87 cents, casual 77 cents; crushing plant 87 to 99 cents; mill—pipefitters, carpenters, sewing machine operators, solutions operators $1.02; mechanics 99 cents and $1.02; painters 96 and $1.02; clarifier operators, samplers, pump operators, supplymen, filter operators, flotation operators, tube mill operators 96 cents; helpers 93 and 96 cents, labourers 87 cents; assay office 90 cents to $1.10; *apprentice* rate starts at 50 cents with a 5 cents per hour increase every 6 months until the lowest helper rate is reached; high school boys on vacation (on extra crews) 52 cents. A cost-of-living bonus of 15 cents per hour has been incorporated in the above basic hourly rates.

Escalator clause: the company agrees to continue the cost-of-living bonus up to a maximum of 7 cents per hour. It is to be based on the Dominion Bureau of Statistics' cost-of-living index: for every increase (or decrease) of one point in the index above 161·8 the bonus shall be increased (or decreased) by 25 cents per week.

Both parties agree to explore the possibility of instituting a *pension plan* "which will provide for a minimum pension of say $50 a month".

Provision is made for *seniority rights* and *grievance procedure*.

SCHUMACHER, ONT.—CONIAURUM MINES LIMITED AND PORCUPINE MINE WORKERS' UNION, LOCAL 100 (CCL).

Agreement to be in effect from August 1, 1950, to July 31, 1951; either party may, on 10 days' notice, require the other party to enter into negotiations for the renewal of the agreement within the period of 2 months prior to the expiry date. The company recognizes the union as the sole and exclusive collective bargaining agency for all eligible employees. There shall be no discrimination against any employee because of his race, colour, religious creed or political belief or because of membership or non-membership in any lawful union or for participating in affairs of the union.

Hours: underground—8 hours from collar to collar; delays in the hoisting and lowering schedules in excess of 15 minutes shall be paid for at straight time; surface—3-shift work—8 hours per day 6 days a week; steady day shift—8½ hours for 5 days and 5½ hours for one day, a 48-hour week in either case; hoistmen, cage-tenders and deckmen on a two shift basis shall lower the shift and return it to surface as part of their regular shift's work. *Overtime:* time and one-half for all time worked in excess of an employee's daily schedule or in excess of 48 hours in any work week (except where longer week is due to regular change in shift), double time for work on 4 specified *paid holidays*.

Vacations with pay: one week after one year's continuous service, 2 weeks after 5 years' continuous service.

Wages: to the scale of wages in effect prior to the date of the agreement shall be added, as a general hourly increase, the cost-of-living bonus of 15 cents. If there should be any change in the price received by the company for its gold, the parties may re-open negotiations regarding wages.

Escalator clause: the company agrees that, commencing at a cost-of-living index of 161·9

as a base (replacing the previous base index of 133·1), the cost-of-living bonus will be continued for the duration of the agreement up to a maximum of 5 cents per hour; for each point by which the index exceeds 161·9 each employee will be paid a bonus equal to 2⅝s of a cent per hour.

The parties will explore the possibility of instituting a *pension plan* which would provide a minimum pension of about $50 a month.

Provision is made for *seniority rights* and *grievance procedure.*

TIMMINS, ONT.—DELNITE MINES LIMITED AND PORCUPINE MINE WORKERS' UNION, LOCAL 100 (CCL).

Agreement to be in effect from October 1, 1950, to September 30, 1951, and thereafter from year to year, subject to notice. This agreement is similar to the one between Coniaurum Mines Limited and Porcupine Mine Workers' Union, summarized above, with the following exceptions:—

Hours: the hours of work for employees on steady day shift shall be 8 per day 6 days a week, except for employees who by custom have worked a longer day for 5 days a week and a shorter day on the sixth.

The *cost-of-living bonus* will be continued up to a maximum of 7 instead of 5 cents.

No provision is made for an exploration of the possibility of instituting a pension plan.

PAMOUR, ONT.—BROULAN PORCUPINE MINES LIMITED AND PORCUPINE MINE WORKERS' UNION, LOCAL 100 (CCL).

Agreement to be in effect from September 15, 1950, to September 14, 1951. There shall be no discrimination or intimidation because of any activity or lack of activity, past or future, of any employee in respect to union activity or membership.

Hours: the schedules of hours in effect at the date of this agreement shall be maintained except if this should be impractical due to lack of work.

The provisions regarding overtime, paid holidays, vacations with pay and wages are similar to the ones in the agreement between Delnite Mines Limited and Porcupine Mine Workers' Union summarized above.

Manufacturing

Vegetable Foods

CHATHAM, ONT.—LIBBY, MCNEILL AND LIBBY OF CANADA, LIMITED, AND THE INTERNATIONAL UNION UNITED AUTOMOBILE, AIRCRAFT AND AGRICULTURAL IMPLEMENT WORKERS OF AMERICA, LOCAL 127.

Agreement to be in effect from November 1, 1950 to October 31, 1951, and thereafter, subject to notice. The company recognizes the union as the sole and exclusive collective bargaining agency for all eligible employees.

Check-off: effective August 1, 1950, a modified "Rand Formula" is to be part of the agreement: the penalties which may be exercised against the union differ from the penalties provided under the "Rand Formula" and dues are automatically deducted from employees' pay only after 4 months of continuous service.

Hours: 9 per day 5 days a week, a 45-hour week. *Overtime:* time and one-half for work in excess of above hours, except for a 4-week period on peas and a 6-week period on tomatoes and corn, when the hours shall be unrestricted for all plant employees and no overtime shall be paid; similar provisions may be made for new seasonal products. Time and one-half shall also be paid for work on Labour Day and on Sundays, except for employees regularly scheduled to work on Sundays; double time for work on 7 specified *paid holidays* (an increase of 1 from previous agreement). The company shall have the right to require hours of work including overtime and night work; penalties are provided for employees refusing to work the sixth day in a week during seasonal work. Available hours of work shall be distributed equally as far as possible; when night work is required, the company shall endeavour to rotate the employees required for such work in a fair and equitable manner.

Vacations with pay: effective January 1, 1951, the company will grant to all employees one week after 1 year's continuous service. 2 weeks after 5 years' service and 3 weeks after 15 years' service (previously only females were granted 3 weeks after 15 years' service, males after 20 years).

Wages: effective October 30, 1950, the minimum hourly wage rates for all regular year around employees shall be: for men 95 cents, for women 80 cents (an increase of 5 cents per hour over previous rates).

Provision is made for *seniority rights* and *grievance procedure.*

Tobacco and Liquors

REGINA, SASK.—SICKS' REGINA BREWERY LIMITED AND INTERNATIONAL UNION OF UNITED BREWERY, FLOUR, CEREAL, SOFT DRINK AND DISTILLERY WORKERS OF AMERICA, LOCAL 318.

Agreement to be in effect from July 1, 1950, to July 1, 1952, and thereafter from year to year, subject to notice.

Union security: the company agrees to employ only members in good standing with the union. If the union cannot supply help within 48 hours, the company may hire other help on permit cards for a probationary period of 2 months after which they must become members of the union. During the busy season from May 1 to September 1, extra help may be employed as long as such employment does not cause any lay-offs of union members. All such extra help must have permit cards issued by the union. No employee shall be discriminated against nor discharged for his activity as a union member. Should it be necessary to reduce the number of employees no union members shall be discharged. They shall be laid off impartially and in rotation in their respective departments for not less than one day, nor more than one week at a time. Only union made malt shall be used. All other union made materials and machinery shall be given preference. The company shall be allowed to use the union label on all packages and cooperage provided all the provisions of the agreement are strictly lived up to.

Hours: for other than operating engineers —8 per day Monday through Friday, a 40-hour week, except where employees are required to work on Saturday morning, in which case they shall be entitled to ½ day off with pay in the next succeeding week;

for operating engineers—8 per day 5 days a week, a 40-hour week on continually rotating shifts (the previous agreement provided for a 44-hour week for all employees). *Overtime:* time and one-half for all work in excess of above hours and for work on Saturday afternoons; double time for work on Sundays and, in the case of operating engineers, for work in excess of 48 hours per week; double time and one-half for work on 9 specified *paid holidays* (previously 8 holidays were paid for).

Vacations with pay: 2 weeks to all union members after one year's service, 3 weeks after 20 years' service, except in the case of operating engineers and night watchmen who shall be granted 3 weeks after one year's service and 4 weeks after 20 years' service.

Minimum hourly wage rates: brewing department—first cellar man, first brewhouse man, first washhouse man $1.26½; brewhouse and cellar men, racking, pitching and washing machine operators $1.21; brewhouse and cellar helpers, washhouse helpers with over one year's service $1.15½; beginners, first 6 months $1.04½, after 6 months $1.10; bottling department—filler, labeller, crowner, soaker operators $1.21; bottleshop men $1.04½ to $1.15½; engineering department—operating engineers, second class $252.66 (per month), third class $237.66 (per month); general mechanics $1.26½; labourers, first 6 months $1.04½, second 6 months $1.10, after 1 year $1.15½; miscellaneous employees—carpenter and painter $277.66 (per month), gateman $165.66 (per month), truck driver $187.66 (per month), watchman 99 cents.

Cost-of-living bonus: if and when the Dominion Bureau of Statistics' cost-of-living index reaches 172·5 the bonus shall be paid on the basis of 5 points and any rise over 172·5 shall also be paid for. If and when the index falls below 172·5 the bonus shall be discontinued.

Provision is made for *seniority rights* and *grievance procedure.*

Printing and Publishing

Montreal, P.Q.—The Montreal Star Company, Limited, and International Typographical Union, No. 176.

Agreement to be in effect from May 15, 1950, to November 14, 1951, and for such reasonable time thereafter (not exceeding 30 days) as may be required for the negotiation of a new agreement. This agreement is similar to the one previously in effect (L.G., July, 1949, p. 874) with the following change:—

Hourly wage rates are now: for the first 12 months of the agreement (May 15, 1950, to May 14, 1951)—for day work $1.80, for night work $1.97⅓, for lobster and split shifts $2.05⅓ (an increase of 15, 16 and 16 cents, respectively, over the previous rates); for the last 6 months of the agreement (May 15, 1951, to November 14, 1951)—for day work $1.85, for night work $2.02⅔, for lobster and split shifts $2.10⅔. Apprentices' rates—31 per cent of journeymen's scale during first 6 months, 32 per cent during second 6 months, 35 per cent during third 6 months and 40, 45, 50, 55, 60, 68, 74, 79 and 84 per cent respectively during the fourth, fifth, sixth, seventh, eight, ninth, tenth, eleventh and twelfth 6 months.

Fur and Leather Products

Toronto, Ont.—Associated Fur Manufacturers of Toronto and the Fur Workers' Union, Locals 21479, 21480 and 21481 of the American Federation of Labour.

Agreement to be in effect from April 15, 1950, to April 15, 1952, and thereafter from year to year, subject to 60 days' notice.

Union security: all workers in the shops shall be members in good standing with the union. All new help shall be secured through the union; if the latter is unable to furnish suitable help within 48 hours the employer may secure help any other way, provided, however, that any experienced or classified help so secured must join the union within 2 weeks.

Check-off: the employers agree to deduct from the wages of all their employees union dues, amounting to 2 per cent of the employees' regular wages, and also all other duly levied assessments, and to remit same to the union weekly.

Hours: 8 per day Monday through Friday, a 40-hour week. *Overtime:* time and one-half for all work in excess of above hours, provided that an employee must first have worked his full 40 hours during the week before being entitled to overtime rates; double time and one-half for work on 7 specified *paid holidays.* The principle of equal division of work shall be adhered to, having regard to the practical working of the shops and to the ability of the employees to perform the work. All employees who have worked for 4 weeks shall be entitled to share in the division of work. There shall be no contracting, sub-contracting, piece-work, or homework. No foreman shall be allowed to work in the factory at work other than his duties as foreman may require. Where there are more than one employer in the firm only one of them shall be allowed to work in the factory.

Vacations with pay: after 4 months' service 1 week, after 1 year's service with the same employer 2 weeks. Employees who work during the holiday period at any place whatsoever will be penalized by the loss of their vacation pay. Any employer allowing such work to be done in his factory shall be penalized a similar amount in addition to any penalty imposed on him by the Association.

Minimum weekly wage rates: cutters, first class $65, second class $55; operators, finishers, first class $48, second class $42; blockers and squarers $39.60, after 5 years' service $45.60; tapers and assistant finishers (to be classed as second class finishers) $42. Employees who are members of the union shall be entitled to an increase of 10 cents per hour from September 1, 1950. Wage adjustments between the 2 parties shall be made only during the month of February (except in the case of not fully skilled workers whose wages may be adjusted from time to time), provided that any adjustment agreed upon shall not come into effect until April 15 of the year the adjustment was made.

Apprentices: the ratio of apprentices shall be one to every 13 workers. Apprentices shall become members of the union after one year's service in the industry.

Sick Benefit and Hospitalization Fund: the employers will continue to maintain a Sick Benefit and Hospitalization Fund to be administered by a joint committee with equal representation from the union and the employers. The employers shall each contribute 1½ per cent of the regular weekly payroll to the fund. Should any health and insurance scheme be instituted by the Provincial or Federal Governments this plan shall immediately cease to function.

Provision is made for the *adjusting of disputes and complaints.*

TORONTO, ONT.—BLACHFORD SHOE MANUFACTURING COMPANY LIMITED AND THE NATIONAL UNION OF SHOE AND LEATHER WORKERS, LOCAL 19.

Agreement to be in effect from October 2, 1950, to June 30, 1951, and thereafter from year to year, subject to 30 days' notice. The company recognizes the union as the sole collective bargaining agency for all eligible employees.

Union security: all present employees to whom this agreement applies shall, as a condition of employment, become and remain members of the union in good standing. New employees shall join the union within one month from the date of employment. All part-time workers must become members of the union.

Hours: 8½ per day Monday through Friday, a 42½-hour week. *Overtime:* time and one-half for work performed outside of the regular daily working hours. There shall be no work on Saturdays, Sundays and on 8 *paid holidays,* except as negotiated with the shop committee. No supervisor or foreman shall perform work during regular or overtime hours when regular employees are available, except for demonstration or instruction or in case of emergency.

Vacations with pay: after 1 year's continuous service 2 weeks, after 20 years' service 3 weeks (this last provision is a new one); employees with 3 months' but less than one year's continuous service shall receive 2 per cent of their earnings in the period that they have worked for each week of the vacation period.

Hourly wage rates: for males—minimum rate 85 cents, operation of covering 87 cents, "A" jobs $1.22, "B" jobs $1.02; for boys—minimum rate 62 cents, increased to 72 cents after one year; for females—starting rate 52 cents, increased to job rate as follows: after 1 year—group 1 (including cementing, pulling, rubbing edges, ironing, singeing) 60 cents, group 2 (including doubling, lining, punching, sorting, trimming, creasing, dressing, shaping, packing, handmarking) 66 cents, group 3 (including closing, eyeletting, taping, repairing, folding) 72 cents; after 18 months—group 4 (binding, cording, fancy stitch, perforating, skiving) 78 cents, group 5 (vamping, top stitching) 84 cents. (With a few exceptions, the above rates represent an increase of 12 cents per hour over the previous rates.) Where female help is used to replace male help, the principle of equal pay for equal work shall prevail.

Provision is made for *seniority rights* and *grievance procedure.*

Metal Products

SYDNEY, N.S.—DOMINION IRON AND STEEL LIMITED AND UNITED STEELWORKERS OF AMERICA, LOCAL 1064.

Agreement dated October 6, 1950, to continue in effect until March 31, 1952, and thereafter from year to year, subject to 30 days' notice. The company recognizes the union as the sole bargaining agency for all eligible employees. There shall be no discrimination, interference, restraint, intimidation or coercion because of membership or non-membership in the union. When hiring new employees the company agrees to give consideration to former union members, if available, and to residents of the immediate vicinity, and to encourage new employees to become members of the union.

Check-off: the company agrees to make deductions for union dues, but only upon presentation of a card signed by the employee in the presence of a witness who has also signed; such cards and all cards already in possession of the company, unless withdrawn 7 days after the signing of the agreement, shall be irrevocable, except for union employees promoted to confidential positions.

Hours: the standard working shift shall be 8 hours (for a job on a continuous basis the 8 hours include the lunch period). From April 1, 1950, to October 28, 1950, the standard work week is to be 44 hours; from October 29, 1950, to June 30, 1951, the working schedule shall be arranged so that employees will work three 40-hour weeks and one 48-hour week in each consecutive 4 weeks; from July 1, 1951, to March 31, 1952, the standard work week shall be 40 hours. *Overtime:* time and one-half for work in excess of the scheduled standard work shift (provided it exceeds 15 minutes) or the standard work week (except in the case of certain dock-workers who shall be paid straight time for any extra time worked) and for work on Sundays to those classes who have heretofore been similarly paid; double time for work on 8 specified *paid holidays;* employees, not qualifying for the holiday allowance, who work on any of the 8 holidays shall be paid time and one-half for such work.

Vacations with pay: 1 week after 1 year's continuous service, 2 weeks after 3 years' service (previously after 5 years' service) and 3 weeks after 25 years' service. The minimum number of shifts which must be worked to obtain full vacation credits is 268 for 1950 and 257 for 1951, less shifts not worked because of accidents, sickness, union duties, jury duty, etc. (previously the minimum requirement was 270 shifts).

Hourly wage rates in effect March 31, 1950, shall be amended as follows: there shall be paid a bonus of 2½ cents per hour for every hour paid for from April 1, 1950, to October 28, 1950, inclusive; from October 29, 1950, to June 30, 1951, all rates shall be increased to 4·65 per cent above the March 31, 1950, rates; commencing July 1, 1951, all rates shall be increased 12½ per cent above the March 31, 1950, rates. Where female help is employed the principle of equal pay for equal work shall apply.

Provision is made for *seniority rights, grievance procedure,* the *health and safety*

of employees and the setting up of joint *committees to study welfare and pension problems.*

TORONTO, ONT.—THE ORNAMENTAL IRON AND BRONZE CONTRACTORS' SECTION OF THE TORONTO BUILDERS EXCHANGE AND THE INTERNATIONAL BROTHERHOOD OF BOILERMAKERS, IRON SHIPBUILDERS AND HELPERS OF AMERICA, LOCAL 128.

Agreement to be in effect from July 1, 1950, to June 30, 1951, and thereafter from year to year, subject to 90 days' notice.

Union security: all union members shall, as a condition of employment, maintain their membership in the union; new employees must become members within 30 days from the date of their employment.

Hours: 8 per day Monday through Friday, a 40-hour week. *Overtime:* time and one-half for work after the regular hours Monday through Friday up to 10 p.m. and for work on Saturdays up to 5 p.m. (with the exception of maintenance and housecleaning work on Saturdays from 8 a.m. to 12 noon); double time thereafter and for work on Sundays and 8 specified holidays 3 of which are *paid holidays* (previous agreement provided for 2 paid holidays).

Vacations with pay: vacation pay amounting to 4 per cent of an employee's earnings shall be granted to all employees in the form of stamps. Vacations shall be given during the months of June, July or August.

Minimum hourly wage rates: special layout men and erectors $1.40; fitters, blacksmiths and erectors $1.30, welders $1.25, rollermen and shearers, continuous operation, $1.20, helpers $1, labourers 95 cents; apprentices, first 6 months 55 cents, second 6 months 65 cents and so on to $1.25 for tenth 6 months. (The above rates are 5 cents per hour higher than the previous rates.)

Apprentices shall be at least 16 years of age. Five years shall constitute the complete apprenticeship period. One apprentice will be allowed for each 3 mechanics; if an employer has fewer than 3 mechanics he shall be allowed one apprentice.

Provision is made for *seniority rights* and *grievance procedure.*

MONTREAL, P.Q.—WARDEN KING LIMITED AND THE UNITED ELECTRICAL, RADIO AND MACHINE WORKERS OF AMERICA, LOCAL 528.

Agreement to be in effect from September 15, 1950, to September 14, 1951, and thereafter from year to year, subject to notice. At any time between March 1 and March 31, 1951, the company agrees to re-open negotiations on wage rates and hours of work upon receiving 15 days' notice from the union. The company recognizes the union as the sole collective bargaining agency for all eligible employees. There shall be no discrimination, interference or coercion practised with respect to any employee because of his membership or non-membership in the union.

Check-off: the company agrees to deduct monthly union dues and initiation fees from the pay of employees who so authorize and to remit same to the union. The authorization may be cancelled only upon the employee giving 10 months' notice.

Hours: 9 per day Monday through Friday, a 45-hour week; the company agrees to notify the union 2 weeks in advance of any reduction in the hours of work. *Overtime:* time and one-half for work in excess of 8½ hours per day Monday through Friday and for work on Saturday up to the completion of 16 working hours, double time for work in excess of 16 consecutive hours Monday through Saturday and for work on Sundays and triple time for work on 8 specified *paid holidays.*

Rest and wash-up periods: two 10-minute rest periods and a 10-minute wash-up period daily will be granted all employees covered by the agreement to be paid at the employees' regular hourly rate or, in the case of piece-workers, at their average piece-work rate.

Vacations with pay: after 2 months' service ½ day for each month in excess of 2, after 1 year's service 1 week, after 2 years' service 1 week and 1 day, after 3 years' service 1 week and 2 days, after 4 years' service 1 week and 3 days, after 5 years' service 2 weeks and after 25 years' service 3 weeks.

Wages (effective June 1, 1950): piece-work rates—all previous piece-work rates shall be increased by a percentage so that the increased rates shall represent a 5 cents per hour increase; *hourly rates* (where 3 rates are given they are for classes A, B and C, respectively): radiator foundry—pourer $1.46, $1.41, $1.36; moulding machine operator, shake-out, stacker, car pusher, top plate $1.20; helper $1.20, $1.12, $1.07; radiator cleaning—tumbling mill operator, snaggers $1.24, $1.17, $1.12; testers $1.27, $1.20, $1.15; radiator core—bakers oven tenders, core rap-out, strainer core makers $1.27, $1.22, $1.17; radiator core makers $1.17, $1.12, $1.07; radiator machine—machinist setter $1.37, $1.32, $1.27; set-up man $1.32, $1.27, $1.22; tapping machine operator, radial drill operator $1.29, $1.23, $1.18; shipper $1.22, $1.17, $1.12; machine operator $1.20, $1.15, $1.10; truckers, checkers, testers helpers, radiator building machine operator $1.17, $1.12, $1.07; spray painter $1.22; boiler foundry—shake-out, moulding machine operator, mould finisher, top plate, core setter, pourer $1.20; floor moulder $1.42, $1.37, $1.32; jobbing foundry—pit moulders, floor moulders $1.42, $1.37, $1.32; bench moulders $1.37, $1.32, $1.27; crane operators $1.32, $1.27, $1.22; pit moulders (improver) $1.27, $1.22, $1.17; helpers $1.17, $1.12, $1.07; boiler machine shop—machinist and setter, tool grinder and setter, reaming machine operator $1.37, $1.32, $1.27; heavy machine operator $1.32, $1.26, $1.21; bench fitter $1.30, $1.24, $1.19; boiler assembler $1.25, $1.19, $1.14; stock keeper $1.22, $1.17, $1.12; nipple machine operator, tool crib attendant $1.17, $1.12, $1.07; maintenance—master electrician, master plumber and steamfitter $1.52, $1.47, $1.42; journeyman electrician, general maintenance welder, millwright $1.42, $1.37, $1.32; general maintenance $1.39, $1.34, $1.29; blacksmith $1.37, $1.32, $1.27; electrician helper, plumber and steamfitter helper $1.27, $1.22, $1.17. The following special rates are provided for certain classes for all productive hours worked: pourers, shake-out $1.42 to $1.60; top plate, moulders, core setter, mould finisher $1.42; for all non-productive labour hours they shall revert to their regular hourly rate. *Apprentices*—first 6 months 87 cents with an increase of 5 cents per hour every 6 months; after 3 years they shall

advance to the "C" rated improvers' hourly rate. The company will continue to pay bonuses in the foundries to units with a low percentage of scrap. The above rates are from 10 to 15 cents per hour higher than the rates provided in the previous agreement.

Night shift differential: a bonus of 12½ per cent per hour shall be paid for work on the second and third shifts.

Provision is made for *grievance procedure* and *seniority rights.*

ST. CATHARINES, ONT.—ENGLISH ELECTRIC COMPANY OF CANADA LIMITED AND UNITED STEELWORKERS OF AMERICA, LOCAL 4152.

Agreement to be in effect from July 12, 1950 to July 11, 1952, and for a further period of one year unless either party gives notice of termination at least 60 days before the expiry date.

Union security: all employees, subject to the provisions of this agreement, who are members of the union, shall remain members during the term of this agreement. New employees shall become members of the union within 30 days and will then be subject to deductions for initiation fee and union dues.

Check-off: the company will deduct union dues monthly from the pay of all employees within the bargaining unit and remit same to the union.

Hours: from July 14, 1950—8½ per day Monday through Thursday, 7½ on Friday, a 41½-hour week; from July 15, 1951—8 per day Monday through Friday, a 40-hour week. (Previous agreement provided for a 42½-hour week.) *Overtime:* time and one-half for work on Saturdays and for the first 4 hours in excess of the normal daily hours, double time thereafter and for work on Sundays, double time and one-half for work on 8 specified *paid holidays,* provided, however, that when an employee has been absent without authorization, overtime payment shall be limited to hours worked beyond the scheduled hours for that week. (The previous agreement provided for time and one-half for all hours in excess of the normal daily hours.)

Rest periods: employees will be granted one 10-minute rest period per shift (previously two 10-minute rest periods were granted) and one-5-minute wash-up period.

Vacation pay shall be 2 per cent of annual earnings after 3 months' continuous service, 2½ per cent after 2 years' continuous service, 4 per cent after 3 years and 6 per cent after 20 years' continuous service.

Hourly wage rates for certain classes (excluding supervisors and learners) for the periods beginning July 14, 1950, and July 15, 1951, respectively: pattern shop—patternmaker 89 cents to $1.57 and 93 cents to $1.63; boxmaker $1.12 to $1.29 and $1.17 to $1.34; woodworker $1.12 to $1.35 and $1.17 to $1.40; cabinet maker and carpenter $1.23 to $1.39 and $1.28 to $1.45; clerk, female 89 to 93 cents and 93 to 97 cents; machine shop $1.12 to $1.46 and $1.17 to $1.52; press room $1.12 to $1.35 and $1.17 to $1.40; transformer $1.12 to $1.35 and $1.17 to $1.40; motors $1.12 to $1.32 and $1.17 to $1.37; inspection $1.12 to $1.46 and $1.17 to $1.52; switchgear $1.12 to $1.39 and $1.17 to $1.45; toolroom $1.12 to $1.62 and $1.17 to $1.68; welding $1.12 to $1.40 and $1.17 to $1.46; test $1.16 to $1.46 and $1.21 to $1.52; packing and crating $1.12 to $1.29 and $1.17 to $1.34; shipping $1.12 to $1.21 and $1.17 to $1.26; maintenance $1.12 to $1.45 and $1.17 to $1.51; general labour $1.12 and $1.17; females, in various departments 89 cents to $1.08 and 93 cents to $1.12. (The rates for the period beginning July 14, 1950, are in most cases 8 cents per hour higher than the previous rates.)

An *off-shift premium* of 6⅔ per cent shall be paid employees on a regularly scheduled shift commencing after 2 p.m.

Provision is made for *seniority rights* and *grievance procedure.*

Construction

TORONTO, ONT.—THE ORNAMENTAL IRON AND BRONZE CONTRACTORS' SECTION OF THE TORONTO BUILDERS EXCHANGE AND THE INTERNATIONAL BROTHERHOOD OF BOILERMAKERS, IRON SHIPBUILDERS AND HELPERS OF AMERICA, LOCAL 128.

The agreement between the parties summarized above under Manufacturing: Metal Products applies as well to erection work in this industry.

Collective Agreement Act, Quebec

Recent proceedings under the Collective Agreement Act, Quebec,* include the extension of one new agreement and the amendment of five others. In addition to those summarized below, they include: the amendment of the agreement for barbers and hairdressers at Victoriaville published in the *Quebec Official Gazette* of December 2, and amendments to the agreements for barbers and hairdressers at Chicoutimi and at Quebec in the issue of December 9.

A request for a new agreement for longshoremen (ocean and inland) at Sorel and requests for the amendment of the agreements for the printing trades at Montreal, for barbers and hairdressers at Valleyfield and at Joliette were gazetted November 25. Requests for the amendment of

* In Quebec, the Collective Agreement Act provides that where a collective agreement has been entered into by an organization of employees and one or more employers or associations of employers, either side may apply to the Provincial Minister of Labour to have the terms of the agreement which concern wages, hours of labour, apprenticeship, and certain other conditions made binding throughout the province or within a certain district on all employers and employees in the trade or industry covered by the agreement. Notice of such application is published and 30 days are allowed for the filing of objections, after which an Order in Council may be passed granting the application, with or without changes as considered advisable by the Minister. The Order in Council may be amended or revoked in the same manner. Each agreement is administered and enforced by a joint committee of the parties. References to the summary of this Act and to amendments to it are given in the LABOUR GAZETTE, January, 1949, page 65. Proceedings under this Act and earlier legislation have been noted in the LABOUR GAZETTE monthly since June, 1934.

the agreements for the shoe manufacturing industry and for truck drivers at Montreal were published December 2. Requests for the amendment of the agreements for the corrugated paper box industry, for the ladies' cloak and suit industry and for tannery workers in the province and for the building trades at St. Hyacinthe were gazetted December 9; requests for the amendment of the agreements for garage employees at Quebec and for the uncorrugated paper box industry, for millinery workers and for tannery employees in the province were gazetted December 16.

Orders in Council were also published approving the constitution and by-laws of certain joint committees and others approving the levy of assessments on the parties.

Manufacturing

Fur and Leather Products

SHOE INDUSTRY, PROVINCE OF QUEBEC.

An Order in Council, dated November 23, and gazetted December 2, extends the term of the previous Orders in Council for this industry (L.G., Jan.-Feb., 1948, p. 50, April, p. 331, Nov., p. 1245; Jan., 1949, p. 65; Jan., 1950, p. 77, Nov., p. 1902, and previous issues) to February 1, 1951.

Metal Products

ORNAMENTAL IRON AND BRONZE WORKERS, MONTREAL.

An Order in Council, dated November 16, and gazetted November 25, makes obligatory the terms of a new agreement between The Builders' Exchange Inc., representing certain companies engaged in the ornamental iron and bronze industry and the United Steel Workers of America, Local 2366. Agreement to be in effect from November 25, 1950, to November 24, 1952, and thereafter from year to year, subject to notice. The agreement is administered by the Building Materials Joint Committee and applies to the manufacture and erection of industrial and building metalwork (with the exception of structural steel framing for buildings) and to architectural work in all metals used for ornamentation; architecturally or for utilitarian purposes.

Territorial jurisdiction comprises the Island of Montreal, Ile Bizard, the counties of l'Assomption, Terrebonne, Laval, Deux-Montagnes, Argenteuil, Soulanges, Vaudreuil, Beauharnois, Châteauguay, Laprairie, Chambly, St. Jean and Iberville.

Hours: 8 per day, 4 on Saturday, a 44-hour week. However, by mutual agreement between employer and employees, the 44-hour week may be distributed by working 9 hours per day Monday to Thursday, 8 hours on Friday.

Overtime is payable at time and one-half, double time for work on Sundays and 7 specified holidays, as provided for in the former agreement. Employees are now entitled to 3 *paid holidays* instead of 2 as provided for in the previous agreement.

Minimum hourly wage rates for mechanics and erectors are increased from $1.17 per hour to $1.25; fitters, blacksmiths from $1.04 to $1.12; helpers (shop or field) from 90 cents to $1 per hour. Rates for *apprentice-mechanics* are based on a percentage of the mechanics' rates and are as follows: from 25 per cent during the first 6 months to 75 per cent during the fourth year. *Night shift* employees to receive a premium of 10 per cent in excess of the day rates. Employees called to work will receive a minimum of 4 hours at prevailing rates for each time called if no work is available.

Cost-of-living escalator clause: this agreement shall be re-opened whenever the cost-of-living index, as established by the Dominion Bureau of Statistics, shall have advanced 5 points in the City of Montreal. The wage rates herein established shall then be readjusted on a percentage basis, calculating from the index figure in effect on September 21, 1950, on which date the agreement was signed.

Vacation: one week with pay after one year of service; 2 weeks with pay after 7 years of continuous service. One-half day for each full month of service to those employed less than one year and one full day for each full month of service to those employees entitled to 2 weeks' vacation with pay who have not completed the current year of service. (The provision governing 2 weeks' vacation with pay was not included in the terms of the former agreement.)

Provision is made for *apprenticeship* regulations and for board, room and travelling expenses for *out-of-town work.*

Construction

BUILDING TRADES, MONTREAL.

An Order in Council, dated November 30, and gazetted December 9, amends the previous Orders in Council for this industry (L.G., June, 1950, p. 874, Oct., p. 1679, Nov., p. 1904, Dec., p. 2067).

Minimum hourly wage rates for employees of the elevator construction industry in the Montreal region are increased by 13 cents per hour for mechanics and by 10 cents per hour for helpers, so that the new minimum wage rate for mechanics is $1.75 and for helpers, $1.23 per hour.

FAIR WAGES CONDITIONS IN DOMINION GOVERNMENT CONTRACTS

The Fair Wages Policy of the Dominion Government has the purpose of ensuring that all government contracts contain provisions to secure the payment of wages generally accepted as current in each trade for competent workmen in the district where the work is carried out.

There are two sets of conditions applicable to government contracts, those which apply to building and construction work, and those which apply to contracts for the manufacture of various classes of government supplies and equipment.

The practice of the different departments of the Government, before entering into contracts in the first group, is to obtain from the Department of Labour schedules setting forth the current wage rates for the different classifications of workmen required in the execution of the work. These schedules, known as fair wages schedules, are thereupon included by the department concerned in the terms of the contract.

Fair wages schedules are not issued in respect of contracts for supplies and equipment. Contracts in this group are awarded in accordance with a policy which provides that wage rates must equal those current in the district.

A more detailed account of the Dominion Government's Fair Wages Policy is given in the LABOUR GAZETTE for July, 1946, p. 932.

Schedules Prepared and Contracts Awarded During November

(1) ***Works of Construction, Remodelling, Repair or Demolition.***

During the month of November the Department of Labour prepared 120 fair wages schedules for inclusion in building and construction contracts proposed to be undertaken by various departments of the Government of Canada in different parts of the Dominion.

During the same period a total of 136 construction contracts was awarded by the various Government departments. Particulars of these contracts appear in the accompanying table.

Copies of the relevant wages schedules are available to trade unions or other *bona fide* interested parties, on request.

The labour conditions of each of the contracts listed under this heading, besides stipulating working hours of not more than eight per day and forty-four per week, provide that "where, by provincial legislation, or by agreement or current practice, the working hours of any class of workers are less than forty-four per week, such lesser hours shall not be exceeded on this work except in cases of emergency as may be approved by the Minister of Labour and then only subject to the payment of overtime rates as specified by the Minister of Labour", and also specify that the rates of wages set out therein are "*minimum* rates only" and that "nothing herein contained shall be considered as exempting contractors and subcontractors from the payment of higher rates in any instance where, during the continuance of the work such higher rates are fixed by provincial legislation, by agreements between employers and employees in the district or by changes in prevailing rates".

(2) ***Contracts for the Manufacture of Supplies and Equipment.***

Contracts for supplies and equipment were awarded as follows, under the policy that wage rates must equal those current in the district:—

Department	No. of contracts	Aggregate amount
Canadian Commercial Corporation. . . .	9,836	$65,136,992.33
Post Office.	15	181,474.93
Public Works.	5	36,415.21
R.C.M.P.	7	178,987.78

(3) ***Arrears of Wages.***

During the month of November the sum of $438.56 was collected from one employer who had failed to pay the wages required by the labour conditions attached to his contract. This amount was distributed by the Department to the 21 employees concerned.

* The labour conditions of these contracts contain the General Fair Wages Clause providing for the observance of current or fair and reasonable rates of wages and hours of labour not in excess of 8 per day and 44 per week, and also empower the Minister of Labour to deal with any question which may arise with regard thereto.

Recent Regulations Under Dominion and Provincial Legislation

A general increase of 20 per cent has been made in minimum wage rates in Quebec. The minimum for forest workers in that Province has also been raised by approximately 20 per cent. ¶The Board of Industrial Relations in British Columbia has revised several more Minimum Wage Orders, in each case increasing the minimum rates. ¶The regulations governing stationary engineers in British Columbia have been revised. ¶In Alberta, the weekly newspaper trade has been removed from the Apprenticeship Act.

In Quebec, the minimum rates of wages for all factory, shop, office and hotel employees and other workers covered by General Minimum Wage Order 4 are now 20 per cent higher, as the result of new regulations. A similar 20 per cent increase in the minimum for woodsmen governed by Order 39 has also been put in effect.

In British Columbia, revised Minimum Wage Orders were issued for taxicab drivers and janitors. In revising its Minimum Wage Order for the taxicab industry, the Board of Industrial Relations made an important change similar to that made for a section of the transportation industry in 1948, applying the principle of punitive overtime rates for work done in excess of certain specified hours. Former restrictions on hours, by which longer hours than those provided by the Hours of Work Act were permitted, have been removed. Janitors and janitresses working in apartment buildings are now covered by a Minimum Wage Order; another Order applies to those employed in buildings other than apartment houses. Previously, there was an Order for each sex establishing uniform rates but no distinction was made in the type of building. In all three revised Orders, an increase was made in the minimum rate.

Under the Alberta Apprenticeship Act, changes were made in the rules for the radio technician and sheet metal trades, and the weekly newspaper trade was removed from the Act.

Revised regulations governing the qualification and certification of stationary engineers were issued in British Columbia, as a consequence of 1950 amendments to the Boiler and Pressure-vessel Act.

DOMINION

Canada Shipping Act

The pilotage by-laws governing four pilotage districts have recently been amended.

In the districts of British Columbia, Sydney and Halifax, the by-laws were amended by Orders in Council P.C. 5165, 4969 and 5195, respectively, with respect to eyesight and hearing tests, and qualifications for pilots' licences. Changes were also made regarding the movage rates in these districts. In the Restigouche River district, the surcharge on pilotage dues was raised.

In the British Columbia, Sydney and Halifax districts, on entering the pilotage service and every fifth year thereafter until they reach the age of 50, pilots must undergo examinations in eyesight and hearing as prescribed in the by-laws. A pilot over 50 years of age is required to have these tests every second year. The licence of a pilot who fails to pass the examination will be suspended. Previously, annual eyesight and hearing tests were required. The same change was made in the by-laws for the Montreal district in June, 1950 (L.G., 1950, p. 1698).

Slight amendments were made with regard to the certificates of competency which a candidate for a pilot's licence in the Sydney and Halifax districts must hold. Candidates in these districts must be Canadian citizens resident in Canada, between the ages of 25 and 50 years and of good character and habits. Candidates in the British Columbia district must be Canadian citizens resident in Canada and be between the ages of 30 and 50 years.

76446—7

The former requirement was that candidates should be British subjects resident in Canada. The age limits are unchanged.

An amendment to the Sydney by-laws deleted the section providing that in addition to the pilotage dues a flat rate of $5 must be paid for embarking or disembarking the pilot by pilot boat, and in the British Columbia district the section was omitted which provided for a charge of $10 for each occasion on which a pilot boat stationed at Victoria is used to embark or disembark a pilot. A similar amendment in all three districts fixes the pilotage dues payable for moving a dead ship.

The by-laws for the Halifax district were amended to provide that each year out of the gross pilotage dues received there should be set aside for the Superannuation Fund a percentage of the revenue, to be determined by the Pilotage Authority after yearly consultation with the Pilots' Committee. These deductions must be made monthly from the pilotage rates collected and must be a first charge against the gross earnings. The section dealing with fines and suspensions was amended to exclude apprentice pilots from its application.

The changes in the by-laws for the Sydney and British Columbia districts were made on October 17 and October 27, respectively, and gazetted on November 8, and those for the Halifax district were made on November 1 and gazetted November 22.

The surcharge of 20 per cent added to pilotage dues in the Restigouche River district in 1947 (L.G., 1948, p. 56) is now raised to 30 per cent by an Order in Council (P.C. 5081) made on October 25 and gazetted November 8.

Prevailing Rate Employees

An amendment has been made to the Prevailing Rate Employees General Regulations by an Order in Council (P.C. 5745) of November 29, gazetted December 13, with regard to vacation leave credits when an employee is absent from work with leave of the deputy head and without pay for more than seven working days unless his absence is due to an injury sustained while on duty or to his obligation to serve on jury duty.

If the period of absence of such a person is over seven working days but does not exceed four times the number of working days in the employee's standard work week, he will forfeit the vacation leave credits which would normally accrue to him for one month of continuous service. If his absence exceeds four times the number of working days in the standard work week, the employee will forfeit the vacation leave credits in respect of the month or months in which the whole or any part in excess of seven working days of that period occurred.

Where an employee is absent in order to serve on jury duty or because of an injury sustained while on duty, his leave credits continue to accrue during his period of absence.

PROVINCIAL

Alberta Apprenticeship Act

New apprenticeship rules have been issued for the radio technician trade, the regulations for the sheet metal trade were amended and the weekly newspaper trade has been removed from the list of designated trades under the Act.

Radio Technicians

New apprenticeship regulations for the radio technician trade were issued under an Order in Council (O.C. 1464-50) of November 20, gazetted November 30, rescinding the former rules for the trade (L.G., 1947, p. 1333).

The term of apprenticeship for the radio technician trade remains at three years, including three months' probation. As before, the term of apprenticeship may be reduced, on the recommendation of the local advisory committee, where a person holds a certificate from an approved technical or vocational school or has had previous experience in the trade. As regards previous experience, a new provision stipulates that, on or after March 31, 1951, no person, unless specially authorized by the Apprenticeship Board, may have his term of apprenticeship reduced except for time during which he has been indentured under the Act.

However, a person working in the trade on November 30 may register as an apprentice without counting in the quota of apprentices which an employer is allowed.

A higher ratio of apprentices to journeymen is now permitted. An employer who employs one journeyman or who is himself a journeyman may employ one apprentice, and thereafter one apprentice for every two journeymen, instead of one for every three, as before. The ratio of apprentices to journeymen throughout the Province must not exceed 2 to 3. This change (from 1 to 3 to 2 to 3) was made in the regulations for the seven building trades and

for the trade of motor vehicle repair when they were revised last year (L.G., 1949, p. 1571).

Every apprentice must attend educational classes as prescribed by the Board and the Department of Education. Technical instruction must be given in accordance with the syllabus of training approved by the Board.

As previously, before being granted an annual certificate of progress or a final certificate of qualification, an apprentice is required to pass trade tests and examinations as prescribed by the Board on the advice of the Provincial Advisory Committee. He must now, in addition, secure a satisfactory report from his employer or the trade school. Failure of the employer to provide a report will be evidence of satisfactory progress.

Wage rates, which are a percentage of the journeyman's prevailing rate, remain unchanged.

Sheet Metal Trade

The regulations for the sheet metal trade (L.G., 1949, p. 1571) were amended with respect to the length of the apprenticeship period by an Order in Council (O.C. 1465-50) made on November 20 and gazetted November 30.

The term of apprenticeship for sheet metal workers remains at four years but this period is now exclusive of any probationary or basic training period whereas previously it included the three months' probationary period.

There has been a corresponding adjustment in wage rates. Beginning, as before, at 35 per cent of the journeyman's rate for the period of registered employment prior to basic training, rates are set for the four years following basic training. These rates are 50, 75, 80 and 90 per cent of the prevailing wages of a journeyman for the first, second, third and fourth year, respectively.

Weekly Newspaper Trade

By an Order in Council (O.C. 1385-50) made on November 6, and gazetted November 15, the Apprenticeship Act is declared not to apply to the branch of the printing trade engaged in publishing weekly newspapers and in job printing done in addition to the publication of the newspaper.

The decision to rescind the 1946 Order in Council (1537-46) under which this trade was designated (L.G., 1946, p. 1463) was made after the Provincial Apprenticeship Board received a resolution from the Weekly Newspaper Association requesting that the Act should no longer apply to the trade, and after the Board made inquiries to determine the wishes of employers and employees in the trade. The trade regulations which were approved by Order in Council 546-47, and those appointing a Trade Advisory Committee (1538-46 and 264-47) were also rescinded.

British Columbia Boiler and Pressure-vessel Act

Effective from November 17, 1950, revised regulations governing the classification and certification of stationary engineers were issued by an Order in Council (No. 2430) approved on November 1, and gazetted November 16. The regulations, which replace those issued in 1947, provide as before, for the certification, by examination, of first-, second-, third-, and fourth-class engineers, and in line with the amendments made to the Act at the 1950 session of the Legislature, set out the qualifications required for a logging-donkey engineer's certificate and three classes of boiler operators' certificates (L.G., 1950, p. 1058). Before the Act was amended, engineers qualified to take charge of certain types of heating plants, logging-donkeys, or other types of steam plant were classified as "engineers with special certificates". The regulations set out the scope of the duties which a person within each of the four new classes may perform. Persons who formerly held a special engineer's certificate are to be deemed to hold a Boiler Operator, Class B, certificate.

Application for Examination

The provisions regarding application for examination are, for the most part, unchanged. Every candidate for a certificate of competency as a steam engineer must complete a written application on the prescribed form and forward it to the Chief Inspector together with the examination fee and copies of testimonials certifying to his character, knowledge and experience and stating the working pressure and horse-power of the plant where he worked. He must have a satisfactory knowledge of both spoken and written English. As an alternative to the requirement that a candidate must be a Canadian citizen, the regulations now provide that he may be a British subject or he must prove that he has filed with the Court Registrar in any Province a declaration of intention to become a Canadian citizen.

A fine not exceeding $100 is provided, on summary conviction, for a person making false representations for the purpose of procuring a certificate and any

76446—7½

certificate granted through error or on improper or insufficient evidence must be immediately cancelled by the Chief Inspector. However, if the evidence entitles the candidate to a certificate of lower grade, this may be issued to him.

Examinations must be both written and oral except in the case of a temporary certificate when the test may be either written or oral. Fees are $2.50 for an examination for a temporary certificate, $5 for an examination for fourth-class, boiler operator, and for a logging-donkey certificate, $7.50 for third-class, $10 for second-class and $15 for a first-class certificate.

If a candidate fails to pass an examination on his practical knowledge, he may not be re-examined for three months.

Qualification and Examination of Engineers

The qualifications for first-, second-, third-, and fourth-class engineers' certificates are, with minor changes, the same as before. The earlier regulations set forth the subject-matter of which a candidate in each class was required to possess a thorough knowledge and this has been omitted. Graduation in mechanical engineering from an approved school of technology as well as from a university is now provided for.

A candidate for a first-class engineer's certificate must have held a British Columbia second-class certificate for at least 12 months; he must have served at least five years as engineer in charge of a shift in a steam plant of not less than 500 h.p., or, as an alternative, have served as a mechanic in a machine-shop on the construction and repair of steam boilers and engines for three years, and three years as engineer in charge of a shift of a steam plant of not less than 500 h.p. The period served as assistant chief engineer of a steam plant over 900 h.p. will be considered equal to that served as shift engineer. A graduate in mechanical engineering from a university or school of technology approved by the Chief Inspector and who has held a British Columbia second-class certificate for at least one year, during which time he has been employed as engineer in the operation of a steam plant of not less than 500 h.p., will be eligible for examination for first-class certificate.

For a second-class certificate, a candidate must be 22 years of age and have served at least four years as engineer of a high-pressure steam plant of at least 250 h.p. or he must have served as a mechanic for three years in a machine-shop on the construction or repair of steam boilers and engines and at least two years as engineer of a high-pressure steam plant of not less than 250 h.p. A new provision permits a candidate who has served six years in a steam plant over 900 h.p. while in possession of a third-class certificate to be eligible for examination for a second-class certificate, provided that his duties have been of an engineering nature approved by an Inspector. Further, a graduate in mechanical engineering from an approved university or school of technology who has been employed two years in a steam plant, or one year on the construction or repair of steam boilers and engines and one year in a steam plant as engineer in charge of a shift, will be eligible for examination for a second-class certificate if his service was in a steam plant of 250 h.p. or over.

To be eligible for a third-class certificate, a candidate must be 20 years of age and have served for two years as engineer of a high-pressure steam plant of not less than 50 h.p. or two years as fireman and one year as engineer. As an alternative, he must have served four years as fireman in a high-pressure steam plant over 50 h.p. or two years as a mechanic in a machine-shop and one year as engineer of a high-pressure steam plant of not less than 50 h.p. A candidate will also be eligible for a third-class certificate if he has graduated in mechanical engineering from a university or school of technology and if he has been employed one year in a steam plant or six months in a machine-shop and six months in a steam plant.

For a fourth-class certificate the candidate must be 18 years old and have served for one year as fireman or engineer of a high-pressure steam plant over 10 h.p. or of a low-pressure plant over 100 h.p. He is also eligible if he has spent one year as a mechanic in the construction or repair of steam engines or boilers and has had six months' service in a high pressure steam plant.

New Classes of Certificates

A logging-donkey engineer is qualified to take charge of any steam-boiler used in the operation of a logging camp or a boiler used for hoisting purposes.

A boiler operator, Class A, may take charge of a low-pressure heating plant up to 200 h.p. and a high-pressure boiler up to 50 h.p. used for heating purposes only.

A boiler operator, Class B, may, as indicated on his certificate, take charge of either (1) a high-pressure boiler not exceeding 50 h.p. or (2) a low-pressure boiler not exceeding 100 h.p. He may also act as second or assistant engineer of a low-pressure heating plant up to 200 h.p.

The qualifications required of candidates for these certificates are as follows:—

A logging-donkey certificate will be granted to a person having twelve months' experience as engineer or fireman on a steam logging-donkey and whose competency and experience is certified to by the owner or superintendent of a steam-powered logging camp in the Province.

For a boiler operator's certificate, Class A, a candidate must be 18 years of age and have served at least one year as fireman or engineer of a high-pressure steam plant over 10 h.p. or of a low-pressure heating plant over 40 h.p. Twelve months' service in a machine-shop on the construction or repair of steam engines and boilers will be considered as equal to six months' service in a steam plant over 10 h.p.

A certificate for boiler operator, Class B (low-pressure heating) will be granted to a candidate, 18 years of age, who has had six months' experience as engineer or fireman in a steam plant over 3 h.p. A candidate who is a *bona fide* member of the plumbing and heating trade may be considered eligible for this examination on presentation of satisfactory testimonials that he is experienced in the installation of steam heating systems.

A candidate for a boiler operator's certificate, Class B (high-pressure heating) must also be 18 years old and he must have had one year's experience as fireman or engineer of a high-pressure steam plant over 3 h.p.

Temporary Certificates

As before, the regulations provide for the granting of temporary certificates which are issued only in emergencies when an engineer of the required class is not available and only on the request of the plant-owner who is required to testify as to the candidate's ability. A candidate for this certificate must furnish testimonials as to his character and must pass an examination regarding the operation of the particular steam plant for which he requires the certificate. Owner-operators of small steam plants may be issued temporary certificates annually.

Marine Certificates

The holder of a marine engineer's certificate issued by any British Commonwealth Government may, at the discretion of the Chief Inspector, be examined for a certificate one grade lower than his marine certificate, providing that his watchkeeping service conforms with the horse-power requirements of the Provincial certificate sought.

Alternative Qualifications

Certain alternative qualifications may be accepted in lieu of the requirements for the various certificates and credits are given for vocational, technical and correspondence courses.

Service in a machine-shop where boilers and engines are not made or repaired but where similar work is done may be accepted in lieu of engine-room service, provided the candidate has served at least one year as engineer in addition to that required for the grade of certificate sought. Maintenance on boilers and engines in a steam plant over 450 h.p. may be considered in lieu of machine-shop service, provided that the class of work performed is satisfactory to the Inspector of the district. As previously, an additional three years' service or more in a machine-shop engaged in the manufacture or repair of steam boilers and engines may be accepted in lieu of one year's engine-room service. If the candidate has been employed as a draughtsman on the design of steam-power plants and equipment for two years or over, his total period of service while so employed may be accepted in lieu of one year's machine-shop service, provided that in either case the Chief Inspector is satisfied that the service has fitted the candidate for the class of certificate for which the application is made.

A candidate who has successfully completed a course in steam engineering at the Vancouver Vocational Institute (Steam Engineering Division) will be credited with six months' steam plant experience toward the certificate covered by the course, and with three months' experience if he has successfully completed a correspondence course in steam engineering with the Department of Education. Similar credits may be given for engineering courses completed at other educational institutions.

Absence of Engineer from Plant

A new section makes provision for the temporary absence of an engineer from a plant.

In the absence of the Chief Engineer from the boiler, engine or compressor room while attending to other duties in the plant, or in the case of a plant operating on two or more shifts, the Chief Engineer must arrange to be relieved by an engineer holding a certificate not less than one grade lower than that required to operate the plant as Chief Engineer. When a shift engineer (i.e. a certificated engineer under the direction of a chief engineer) finds it necessary to leave the boiler room for more than 15 minutes while it is operating, he

must be relieved by another engineer whose certificate is not less than one grade lower than his own.

When an engineer is absent on holidays of because of illness, an engineer with a certificate one grade lower than his own may replace him for a period up to 30 days, though this period may be extended in special circumstances.

Certificates

Certificates are granted for life or during good conduct except in the case of temporary certificates which are valid only for the period stated on the certificate. If an engineer proves that his certificate has been lost or destroyed, he may obtain a duplicate for $5. If the classification of a steam plant is changed due to an increase in horse-power or to changed regulations, the engineer need not immediately obtain a certificate of the grade required due to the change, provided that he has been operating the plant for three consecutive years prior to the change. He must, however, take an examination within a time limit set by the Chief Inspector. When a candidate who holds an engineer's certificate issued under the Act qualifies for a higher grade, he must, on request, deliver his certificate of lower grade to the Chief Inspector for cancellation.

A certificate must be framed, protected by glass and kept posted in the engine or boiler room. It must be removed when the engineer ceases to be employed in the plant.

The regulations are now more specific in listing the circumstances which will make certificates liable to cancellation or suspension. These include intemperance, negligence, physical or mental incapacity, allowing another person to operate under the holder's certificate, an engineer absenting himself before ensuring that all machinery is shut down and all boiler fires banked, and other reasons considered by the Chief Inspector to be hazardous to the operation of the plant.

British Columbia Electrical Energy Inspection Act

By a notice gazetted on November 16, the regulations under the above Act which went into effect on June 1, 1950, governing electrical permits and inspection fees will now apply throughout the entire Province. Originally, the regulations applied only to the industrial area along the west coast and the international boundary (L.G., 1950, p. 1064) and subsequently they were extended to cover the southern half of the Province (L.G., 1950, p. 1700).

The regulations require any person who constructs, installs or alters electrical work in any premises to obtain a permit from the Inspector of Electrical Energy, on penalty of a fine of not more than $50.

British Columbia Hospital Insurance Act

Amendments have been made to the general regulations under the Hospital Insurance Act with respect to the hospital insurance period by Orders in Council made on November 25 and gazetted December 7.

The former section which provided for two hospital insurance periods in each year, one from January 1 to June 30 and the other from July 1 to December 31, has been rescinded. Instead, hospital insurance period is now defined to include "any period of time less than 12 months which is designated as such by the Commissioner. Periods of time having different numbers of days may be so designated by the Commissioner, and such periods may comprise portions of two consecutive calendar years".

As before, premiums must be paid in advance but no specific date is set. Previously, payment was required at least one month in advance of the beginning of the year or of the hospital insurance period to which the payment applied, e.g. on or before November 30 when annual payment was made in full, and on or before May 31 or November 30 when payment was made in two or more instalments. Payment of the annual premium must now be made before the commencement of the year to which it is applicable. When a premium is paid in instalments, the amount of each may be determined by the Commissioner in relation to the length of the hospital insurance period, and payment must be made before the beginning of that period. If the required payment is made by or on behalf of a person on or after the first day of the hospital insurance period to which it is applicable, the person will not become a beneficiary under the Act until one month from the day on which the payment was made.

British Columbia Hours of Work Act

The Board of Industrial Relations has decided to remove the hours of work restrictions on taxicab drivers and to attempt to regulate their hours by imposing progressive overtime rates of pay as a penalty upon the employer for working employees in excess of certain specified hours. The industry was brought under the Hours of Work Act in 1938 (L.G., 1938, p. 1094).

Accordingly, the taxicab industry has been deleted from the schedule to the Hours of Work Act, and effective from December 17, 1950, Regulation 28A which permitted taxicab drivers to work nine hours in a day and 50 hours in a week is rescinded. The rescinding regulation, No. 28B, was made and gazetted on November 23. The Minimum Wage Order fixing new minimum and overtime rates of pay is described below.

The Board made a similar change with respect to drivers, swampers and helpers in the transportation industry in 1948, when it issued Minimum Wage Order No. 9 (L.G., 1948, p. 1135). Under this Order, time and one-half must be paid after 8½ and up to 11 hours in a day and double time after 11 hours. For work beyond 47 hours in a week time and one-half must be paid, provided that in the latter case overtime does not include the overtime covered above.

British Columbia Male and Female Minimum Wage Acts

Three new Minimum Wage Orders have recently been issued by the Board of Industrial Relations, governing taxicab drivers, janitors and janitresses. For the first time all male and female taxicab drivers and dispatchers in the Province are covered by a Minimum Wage Order (No. 33). The two previous Orders in effect applied in the Vancouver and Victoria districts and governed men only. With the new Order 33 the Board will apply the principle of punitive overtime rates instead of limiting hours by regulation under the Hours of Work Act. Time and one-half must now be paid for the first two hours after eight in a day and double time after 10 hours.

The two former Orders, made in 1942, one governing janitors and the other janitresses, which laid down uniform conditions for these workers, are rescinded and replaced by two new Orders, one covering both janitors and janitresses employed in buildings other than apartment houses (No. 44) and the other for those employed in apartment buildings (No. 43).

The Orders governing the manufacturing industry (No. 25) and the fruit and vegetable industry (Nos. 46 and 47) were amended with respect to the daily guarantee clause.

These Orders were made on November 24 and gazetted November 30, with the exception of the one covering taxicab drivers which was made on November 13 and gazetted on November 23.

Taxicab Drivers and Dispatchers, Order No. 33 (1950)

Effective from December 18, 1950, a minimum rate of 55 cents an hour is fixed for male and female taxicab drivers and taxicab dispatchers. The Order covers all persons in the Province who operate or drive for hire a motor vehicle with seating accommodation for nine passengers or less, or who are responsible for assigning work to taxicab drivers or directing their movement. The two Orders previously in effect for taxicab drivers [No. 33 (1940) and No. 60 (1938)] classified taxicabs as motor vehicles with seating capacity for seven persons or less. These two Orders, now rescinded, applied to males only. Order No. 33 fixed a daily minimum rate of $3.30 for taxicab drivers in Vancouver. Under Order No. 60, which applied to Victoria, Esquimalt, Oak Bay and Saanich, the daily minimum was $3.60 for a day of not more than 10 hours.

The new Order requires time and one-half the regular rate to be paid for the first two hours worked in excess of eight in a day, double the regular rate of pay for all hours worked in excess of 10 in a day, and time and one-half for hours worked in excess of 48 in a week, provided that the weekly overtime does not include any overtime calculated on a daily basis. The earlier Order covering Victoria and district fixed an overtime rate of 54 cents an hour for time worked in excess of 10 hours in a day. Overtime was not provided for in the Order for Vancouver.

The daily guarantee clause in the new Order provides that when an employee reports for work on the call of an employer he must receive his regular rate of pay for the entire period spent at the place of work with a minimum of two hours' pay in any one day.

Janitors in Buildings other than Apartment Houses, Order No. 44 (1950)

Effective from January 1, 1951, a minimum of 50 cents an hour must be paid to every male and female janitor, janitor-cleaner, janitor-fireman and janitor-engineer in buildings other than apartment buildings, an increase of five cents an hour over the previous rate.

Unless with the written authorization of the Board of Industrial Relations, hours of work of janitors must not exceed eight and 44. Where, by written authorization, the Board permits working hours to exceed eight and 44, the hours authorized must be in accordance with the exceptions permitted by the Hours of Work Act and must be paid for at time and one-half the employee's regular rate of pay. Where in

accordance with the variations provided for by the Hours of Work Act, different arrangements with respect to hours are permitted, the overtime rate of time and one-half does not apply until the employee has completed the hours so established.

A weekly rest of 32 consecutive hours must be granted to every employee of which he must be duly notified by his employer.

Janitors in Apartment Buildings, Order No. 43 (1950)

Janitors and janitresses in apartment buildings containing four residential suites or less also receive a five-cent increase and must be paid a minimum of 50 cents an hour from January 1, 1951. As before, in buildings with more than four suites, the minimum wage is graded on a monthly basis according to the number of suites. These rates have all been raised by about 8 per cent and range from $35.10 a month for five residential suites to $178.75 a month for 47 or more suites. In buildings containing five or more suites, the janitor must receive, in addition to the above rates, 50 cents an hour for all time spent in attending to single rooms, stores, or accommodation other than residential suites.

If two or more janitors are employed in an apartment building and reside on the premises, the employer must designate and record on the payroll at least one as resident janitor and pay him the minimum monthly rate specified according to the number of suites. If more than one are designated as resident janitors, each must be paid the minimum rate fixed.

Certain deductions are allowed to be made from the minimum rates established by this Order. If the janitor resides on the premises, his wages may be reduced by an amount equal to a fair rental value for the accommodation in proportion to the rental value of the other suites in the same building. However, not more than $20 a month may be deducted for two rooms and bathroom and not more than $5 a month for each additional room and in no case must the total rental value deducted exceed $30 a month (previously $25). A new provision permits the Board, when it is of the opinion that the accommodation is unsuitable, to give notice in writing to the employer of the facts and also to limit the charges and deductions which the employer may make.

If the janitor is supplied with electricity or gas, the employer may deduct not more than $4 a month from his wages or, as an alternative, meters may be installed and the janitor must pay for the consumption of the electricity according to the meter.

As before, a weekly rest of 24 consecutive hours must be granted to janitors in apartment buildings containing 20 or more suites, and eight consecutive hours' rest if he is employed in buildings containing from 12 to 19 suites.

Manufacturing, Order No. 25 (1948)

Effective from November 30, 1950, the Board of Industrial Relations by Order 25A may grant exceptions to the provision in Order No. 25 covering the manufacturing industry which stipulates that an employee reporting for work on the call of an employer must be paid at his regular rate of pay for the entire period spent at his place of work with a minimum of two hours' pay if he does not start work and four hours' pay if he does commence work.

Fruit and Vegetable Industry, Orders 46 and 47 (1946)

In the two Orders governing men and women workers in the fruit and vegetable industry (L.G., 1946, p. 988) the clauses have been deleted which required workers to be paid a specified daily minimum which was equal to three hours' pay at the minimum rate. Instead, there is now inserted a clause which is similar in wording to the daily guarantee sections in most of the revised Orders. This clause provides that an employee reporting for work on the call of an employer must be paid for the entire period spent at his place of work in response to the call with a minimum of three hours' pay at his regular rate. This change was made by Orders 46A and 47B.

Ontario Labour Relations Act

The rules of procedure made under the Labour Relations Act, 1950 (L.G., 1950, p. 1922), were amended by O. Reg. 259/50 of November 17, gazetted November 25, to provide for the procedure to be followed for the service of papers where there are more than five interventions filed by employees claiming the same interest in the proceeding. In such circumstances, the registrar must serve upon the parties to the proceeding a copy of one of the interventions, and issue to the employer of the interveners an appropriate number of copies of any notice, report, document or paper which the Board directs to be served, to be kept posted upon the employer's premises for five working days in conspicuous places where they are most likely to come to the attention of the interveners.

Quebec Minimum Wage Act

An increase of 20 per cent has been made in the minimum rates for all workers covered by General Minimum Wage Ordinance 4 and for woodsmen covered by Ordinance 39 governing forest operations. One of the seven categories of workers into which Order 4 has been divided and part of another category were deleted from the Order and made the subjects of two new special Orders. Amendments were also made to Order 3 which provides for an annual vacation with pay for most workers in the Province.

General Order 4

Employees governed by General Order 4, which covers industries to which special Orders do not apply, were formerly classed in seven categories—I. Employees of industrial and commercial establishments; II. Office workers; III. Carters and chauffeurs, messengers and garage employees; IV. Employees in hotels, restaurants, lodging houses, boarding houses, staff houses and taverns; V. Watchmen and janitors; VI. Employees of public corporations and of certain seasonal industries, telephone operators and miscellaneous employees; and VII. Stationary enginemen and firemen.

Category VI, Section I, which covers employees of municipal and school corporations, firemen and policemen, professors, teachers, sacristans and sextons, has been deleted from Order 4 and made into a new special Order, No. 41. Category VII covering stationary enginemen and firemen now becomes Order 42. These changes were approved by Order in Council 1254 of November 16 and gazetted on November 25.

Effective from December 16, 1950, the minimum rates for all workers now covered by General Order 4 were increased by 20 per cent by an Order in Council (O.C. 1290) made on November 23, and gazetted on December 16. Some 400,000 employees in the Province are governed by this Order.

For the purpose of Order 4, the Province is divided into four zones, consisting of Montreal and district, Laprairie, Longueuil, St. Lambert and Laval-des-Rapides as Zone I; Quebec and district and towns of 10,000 people or over as Zone II; Terrebonne and towns of from 2,000 to 10,000 people as Zone III; and the rest of the Province as Zone IV.

If a rate, when increased by 20 per cent, includes a fraction of a cent it is to be reckoned to the nearest cent, half a cent or more being counted as one cent. With the 20 per cent increase added, the new rates for some of the more important classes of workers are as follows: In industrial and commercial establishments, at least 75 per cent of the employees must be paid 42 cents an hour in Montreal and district, 38 cents in Quebec and other municipalities of 10,000 persons and over, 34 cents in Terrebonne and municipalities of from 2,000 to 10,000 persons, and 30 cents in the smaller places. Not more than 25 per cent of the workers in industrial and commercial establishments may be paid 36, 34, 29 and 24 cents in the four zones, respectively.

For office workers with two years or more experience, the increased rates are 42, 38, 34 and 30 cents in the four zones, respectively. With respect to hotel and restaurant workers, waiters, maids and elevator operators must receive at least 36, 34, 29 and 24 cents in Zones I, II, III, and IV, respectively; kitchen help must be paid 42, 38, 34 and 30 cents; the minimum for cooks is now 48, 44, 40 and 36 cents; and bellboys and porters in all zones must be paid at least 18 cents an hour.

The deductions permitted for board and lodging have also been increased and the new rates set out in the amending Order are as follows (the three rates given refer in each case to Zone I, Zones II and III, and Zone IV, respectively): 25, 20, and 15 cents for a single meal; $4.50, $3.60 and $2.70 for a week's meals; 25, 25 and 22 cents for a day's lodging; $1.50, $1.40 and $1.30 for a week's lodging; $6, $5 and $4 for a week's complete board; and $26, $21.50 and $17.50 for a month's complete board.

Forest Operations

The minimum rates of wages for different classes of woodsmen were raised 20 per cent by an Order in Council (O.C. 1290) of November 23, gazetted December 2, amending Ordinance 39, 1942, governing forest operations. Ordinance 39 (L.G., 1943, p. 268) covers all work in forests including transporting timber and reforestation, but does not apply to the handling of wood in mill storage ponds or to work in forest colonies. The Minister of Labour for Quebec in announcing the increase in rates stated that it will cover in the neighbourhood of 80,000 workers. The last general increase in the minimum rates for these workers was made in 1948 (L.G., 1949, p. 186).

Rates are now fixed by the day in all cases where they were previously set for a month of 26 working days. The new rates are given below but not the monthly rates which they replace.

As with other special Orders, the employees covered by Order 39 are classed in various categories. These are: I. Cooks, teamsters, tradesmen and others whose work is needed

for any forest operation regardless of the use to which the wood may be put; II. Employees engaged in pulpwood operations; III. Employees engaged in cutting firewood and charcoal wood; IV. Employees engaged in cutting sawlogs and other kinds of wood; V. Employees employed on driving operations; VI. Apprentices and incapacitated.

For cooks the new rates range from $4.40 a day in a camp of nine men or less to $6 a day in a camp of 50 or more. Cookees and choreboys and other kitchen and camp help must now receive $3.40 a day. The daily minimum for a stableman is $4.60. A teamster must be paid at least $5.30 a day, with an additional $1.60 if he uses his own team and an additional 70 cents for a single horse. The rate for carpenters, blacksmiths, sawfilers, shotfirers, mechanics, truck and tractor drivers, enginemen and motor men is at least $5.50 a day.

In pulpwood operations, workmen engaged in felling trees, or in making, handling or transporting logs are now entitled to $5.10 a day; those engaged in road-making, construction of camps or improvement work of all kinds must receive at least $4.90 a day; all other employees except those of Category I must be paid a daily rate of $5.10. For pieceworkers whose work is the felling and making and piling of wood and the construction of small hauling roads, the rate varies from $4.40 per 100 solid cubic feet for lengths of from 4′ to 6′ to $2 for 16-foot lengths. For wood measured by the cord, a rate of $3.75 per cord is set. For aspen and poplar wood, rates approximately 25 per cent lower are fixed. When peeling is included in the making of the wood, an additional $1.80 per cord must be paid, or $2.10 per 100 s.c.f. and for aspen and poplar $1.35 per cord or $1.60 per 100 s.c.f. For work other than the piling of logs or the construction of small hauling roads, lower rates may be agreed upon and stipulated in the hiring contract but such rates may not be lower than $4.20 a day.

For cutting firewood and charcoal wood, the new rate for workers on a fixed wage basis is $4.20 a day. For pieceworkers cutting and piling firewood, the rate per cord for wood 4 feet in length is $3.75. The minimum per 32 square feet (4′ x 8′) of piling surface is $2.80 for logs 3 feet long; $2.25 for logs 2 feet long; $1.70 for logs 1½ feet long; and $1.40 for those 15 inches long.

For cutting sawlogs and other kinds of wood, employees are entitled to $4.40 a day. For pieceworkers in this category, the rates range from $4.05 to $6.10 for 1,000 board feet depending on the length of the logs. For cutting wood measured by the cord the rate must be at least $3.75 per cord, or for wood measured in solid cubic feet $4.40 per 100 s.c.f. An additional $4.50 per 1,000 board feet, $1.80 per cord and $2.10 per 100 s.c.f. must be paid where peeling of the wood is included. As with pulpwood operations, the minimum for work other than that mentioned above is $4.20 a day and the rate must be stipulated in the hiring contract.

The rates fixed for piecework done by persons employed in pulpwood or sawlog operations apply only to the quantity of marketable timber accepted by a culler as defined in the Quebec Cullers' Act.

The rates for drivers have been raised to $6.50 a day; for sorters and other employees to $5.10; and for dam guardians to $4.40.

Apprentices and incapacitated workers must be paid at least $4.20 a day, but cooks, persons employed in firewood operations and drivers may not now be classed in this category. As before, apprentices and incapacitated must not exceed 20 per cent of all employees in the camp.

Also increased are the maximum deductions which the employer is permitted to make for board and lodging furnished to his employees. The sum deducted may now not exceed $1.50 a day instead of $1.05 a day. Added to the list of deductions which may be made from wages is the cost of laundering certain specified articles of clothing to the extent of 40 cents, and the laundering of any other article provided it is included in a list posted in the employees' living quarters.

Unless exempted by the Minimum Wage Commission, the employer must give an employee who leaves his employment a signed pay statement in the form set out in the regulations, stating his gross earnings, whether on piece-work or on a fixed wage basis, the nature and amount of deductions made from his wages, and the number of days worked and days present in the camp. As before, the employer is required to send to the Commission a copy of the engagement contract and of the pay statement of the employee.

As before, if the employer so stipulates in the hiring contract, a worker who voluntarily leaves his work without adequate reason within 15 days after he begins work is entitled to a minimum wage but can claim neither travelling expenses nor board and lodging expenses en route. The minimum now fixed for such workers is $4.20 a day rather than $85 for 26 days' work.

The employer must post a copy of the Order in his employees' lodging quarters. Previously, he had to do so only on request.

Vacations with Pay

The list of exceptions from the coverage of the Vacations with Pay Order (No. 3) was amended with respect to construction workers by Order in Council No. 1254 of November 16, gazetted November 25. Formerly, all employees engaged in the construction of buildings were exempted but from November 25 only manual workers in that industry are excluded. The Order continues to exclude workers engaged in forest operations, those employed by public corporations, farm workers, domestic servants, janitors, watchmen, salesmen and certain part-time workers, as well as workers covered by a decree under the Collective Agreement Act.

Construction workers who are usually employed by several employers during the year on the Island of Montreal and a 15-mile radius, in Hull and district and in Salaberry de Valleyfield are covered by Order 3A which provides for a stamp system of holiday pay credits.

Saskatchewan Hours of Work Act

Effective from November 6, persons employed in garages and automobile service stations in or within a five-mile radius of any Saskatchewan city who work over 44 and up to 48 hours a week must receive a minimum weekly wage of $23.

These workers were exempted from the 8- and 44-hour limits of the Hours of Work Act by Order No. 6, 1947 (L.G., 1947, p. 1187) to the extent that they may work nine hours a day and 48 a week after which time and one-half has to be paid. Until now, however, no special provision was made for requiring these workers who worked between 44 and 48 hours to be paid more than the general minimum of $21 a week fixed by Minimum Wage Order No. 1 (L.G., 1949, p. 747).

Legal Decisions Affecting Labour

An Ontario Court has issued an injunction forbidding picketing where employees have not used the machinery provided by law for settlement of a dispute before going on strike.

An appeal from an order forbidding discrimination in employment on grounds of colour was heard by the Connecticut Superior Court.

Injunction granted by Ontario High Court of Justice to restrain picketing in support of a strike not recognized as lawful.

An interlocutory injunction restraining certain employees of Oakville Wood Specialties Limited from picketing the employer's premises was issued by Mr. Justice Gale of the Ontario High Court of Justice on September 25, 1950. The order restrained the employees from picketing, from intimidating employees or customers, from inducing breaches of contract or from encouraging any of these acts.

Picketing had occurred during a strike which began August 31, 1950. The International Woodworkers of America, Local 95, CIO-CCL, had been certified by the Ontario Labour Relations Board on June 13, 1950, as the bargaining agent for the firm's employees. Negotiations for a first collective agreement were in progress when the strike took place, and no application had been made to the Labour Relations Board for conciliation services. A temporary injunction restraining picketing was granted by the Court on September 20 and was extended after a hearing on September 25.

Mr. Justice Gale, in giving his reasons for extending the injunction, pointed out that the strike that had taken place "cannot be recognized as lawful under our existing statutes". The basis for the injunction was the unlawfulness of the strike and the damage caused to the employer as a result of this unlawful act by the disruption of operations at the height of the manufacturing season.

It was argued for the defendants that, rather than ask the Court for an injunction, the proper procedure for the employer would have been to apply to the Ontario Labour Relations Board in accordance with the Ontario Labour Relations Act, 1950, Chapter 34, Section 59, for a declaration that the strike was unlawful, or, alternatively, to apply for leave to prosecute or lay an information under Section 501 (*f*) of the Criminal Code.

[Section 59 provides that where a trade union calls or authorizes a strike which

the employer concerned alleges is unlawful, the employer may apply to the Board for a declaration that the strike is unlawful and the Board may make such a declaration. This is a new provision in the 1950 Ontario Labour Relations Act.]

In dealing with this contention, Mr. Justice Gale stated:—

> I do not think that in the circumstances of this case the company is to be denied the remedy it seeks here simply because there is available other new procedure which, if successful, will result in a mere declaration. Such a declaration would not be of any value to the company that I can see since the Board is not clothed with the authority to adjust property and other rights which have been disrupted by the strike.

Neither such proceedings nor proceedings under the Criminal Code would have answered the purpose of the company, which was to stop immediately the damages caused by the unlawful strike.

It was further argued for the defendants that, although the company appeared to be asking for termination of the continuing damage caused by the strike, it really was seeking to defeat the strike as such, whether legal or illegal, and that the Court's aid ought not to be extended for that purpose. Mr. Justice Gale ruled out this objection, saying that

> it would be preposterous if that argument were to prevail, for it would mean that there would then be a decision to the effect that, notwithstanding that irreparable injury was being suffered by the plaintiff as a result of that strike, no remedy would be available to the applicant because that remedy might have the appearance of interfering with a strike or with the relations between employer and employees.

The last argument of counsel for the defendants was that the company's conduct from July 29 to August 31 was such as to disentitle it to relief through an injunction. His Lordship did not find from the material before him that the conduct of the employer was such as to deprive him of the aid of the Court. He pointed out that there was available to the employees

> other lawful and effective means of achieving their ends. It would have been a simple matter for the employees and their representatives to have immediately caused to be put into operation the machinery provided for that purpose by the Labour Relations Act, and by it to have properly and powerfully made known the complaints they were then voicing.

He accordingly granted an injunction restraining picketing "until the trial or other final disposition of this action."—*Oakville Wood Specialties Limited* v. *Mustin, et al.* [1950] OWN, p. 735.

A collective agreement was signed between the company and the bargaining agent on October 2, 1950.

A recent judgment of the Connecticut Superior Court deals for the first time with an order under the State Fair Employment Practices Act.

An appeal from an order of the Interracial Commission made under authority of the State Fair Employment Practices Act was heard in the Connecticut Superior Court on October 10, 1950. The Court supported the order in a modified form.

Connecticut is one of the ten States which has legislation seeking to prevent discrimination in employment. The statute provides that

> it shall be an unfair employment practice (*a*) for an employer, by himself or his agent, except in the case of a *bona fide* occupational qualification or need, because of the race, colour, religious creed, national origin or ancestry of any individual, to refuse to hire or employ . . . such individual . . .

Any person claiming to be aggrieved may file a written complaint, under oath, with the Commission. The Commission is required to investigate and endeavour to eliminate the matter complained of "by conference, conciliation and persuasion." If it fails to do so, the matter proceeds to a hearing before a tribunal consisting of members of the Commission or panel of hearing examiners. The respondent, that is the employer, labour organization or employment agency named in the complaint, is required to appear before the tribunal. After making its finding of fact the Commission may issue an order and petition the Court for the enforcement of the order. The respondent named in the order has the right of appeal to the Court.

In the case under appeal, the tribunal found that Draper, a 23-year old negro, was the first to answer an advertisement inserted by a dairy company in a daily newspaper reading "Boys, 18 years or over. Experience unnecessary. Evening work." Draper was interviewed, with another coloured applicant, by the store manager, and was told the advertised job was taken, but he left his name, upon the assurance that the manager would get in touch with him in the event of future openings. Several other applicants later answered the advertisement and four of these, all white persons, ranging in age from 18 to 23 years, secured jobs within a short time either as dishwasher or fountain man in the employer's milk and ice cream stores. The first of these was employed as a dishwasher some two and a half hours after

the applicant's interview. The employer had several job openings on the day Draper applied, for which no special qualifications were required other than that the applicant should be 18 years of age or older and that he should be willing to work nights. Subsequently the manager gave the Commission's investigator three reasons for refusing employment to Draper: that the job was filled, that the applicant was too old, and that the wages were too low for a man of his age. The employer had no negro employees in any of its stores except a girl who appeared to be white. The hearing tribunal, from the evidence before it, drew an inference that on August 1, 1949 the employer refused employment to the applicant because of his race. It then, on March 8, 1950, issued an order directing the employer "to cease and desist forthwith" from refusing to employ Draper. The employer appealed under the provisions of the Act, and pending determination of the appeal, obtained from the Court a stay of the order.

Three issues were raised in the appeal before the Court: first, whether the applicant for employment is a necessary party to the action; second, whether the hearing tribunal's finding should stand; and third, whether, if the finding stands, the order based upon it is legally proper.

In dealing with the first issue, Judge Alcorn in his reasons for decision stated that it is an established principle that no court will adjudicate on a matter involving conflicting rights and interests, until all persons directly concerned have been given reasonable opportunity to appear and be heard. He found, however, on examination of the statute that while the applicant's complaint of discrimination sets the machinery in motion, he has no part in its subsequent operation. If the applicant's complaint is not sustained by the Commissions's order, or if the order appears to him inadequate to meet his grievance, no provision is made for him to appeal to the Courts. "Clearly the adversary parties before the Court are the Commission and the respondent employer. The statute gives no right or interest to the applicant which makes him a necessary party. It is equally true that no decision upon this appeal can be binding upon him."

The second issue raised by the employer was that the tribunal's finding of facts should not stand. In dealing with this objection the Judge described the function of the Court in a hearing of this kind where the findings of an administrative tribunal are questioned. The Court cannot substitute its own discretion for that reposed by statute in the hearing tribunal. Due consideration must be accorded the presumption that an administrative body has acted fairly, with proper motives, and upon valid reasons, and not arbitrarily. "Finally, in cases where the statute provides for a full hearing and record before the administrative body, the procedure on the so-called appeal is upon the record of the proceedings before that body and from this record the Court's function is to determine whether the administrative body acted arbitrarily, unreasonably or contrary to law."

The statute places upon the Commission and the hearing tribunal the heavy responsibility of determining the intent behind a given act, in this case the reason why the dairy company refused employment to Draper. The hearing tribunal saw and heard the witnesses and the Court did not, and the hearing tribunal is the judge of the credibility of the witnesses. The conclusion reached by the hearing tribunal is not reviewable by the Court unless it is one which cannot reasonably be reached. "The test is, whether the evidence, fairly and impartially considered, would be likely to induce in the minds of men of ordinary intelligence, attentively considering it and using common sense logic, a reasonable belief that it is more probable than otherwise that the fact in issue is true." Applying this test to the record in question, the Court held that the finding of the hearing tribunal should stand.

Thirdly, he found that the order as it stood was in effect an affirmative order to the employer to employ Draper now. If no vacancy existed, it would require the employer to discharge an employee to make a place for Draper or else to create a useless job for him. It further presumed that Draper would submit himself for employment. He had studied at a photography school and had applied for the job in issue as a stop-gap. He was not a party to the proceedings and an order arising out of them could not bind him. The purpose of the statute is to eliminate discrimination in employment for specified reasons. Employment might legitimately be refused, at the date of the order, for other reasons. The Court accordingly modified the order to provide as follows:—

> In the event that Oscar S. Draper . . . presents himself for employment you are hereby ordered to cease and desist from refusing, because of his race, to employ him.

Draper v. *Clark Dairy, Inc.*, Connecticut Superior Court, Labour Relations Reporter, Vol. 27, No. 7, p. 2072.

LABOUR LEGISLATION AND SOCIAL SERVICE IN ICELAND

Iceland's labour legislation covers the legal position of trade unions, the handling of industrial disputes, labour exchanges, holidays with pay, publicly-aided housing, and social insurance.

A recent publication of the Ministry of Social Affairs in Iceland describes in considerable detail the labour and welfare legislation in effect at present in that country. With a view to acquainting the reader more fully with such legislation, the Ministry of Social Affairs devotes some space to outlining the historical growth of labour organizations and of social welfare schemes.

Early Labour Statutes

The first labour organizations in Iceland were formed towards the end of the nineteenth century. The National Federation of Icelandic Trades Unions, to which most trade unions are affiliated, was organized in 1916. At the same time legislation directly affecting workers was developed. In 1915 strikes by public servants were banned and ten years later a law was passed providing for machinery to effect official mediation in labour disputes.

The Labour Act, 1938

Comprehensive labour legislation in Iceland dates from the Labour Act of 1938. Under this statute workers are granted the right to organize and trade unions are given the right to negotiate the wages and terms of employment of their members. If not otherwise specified in the agreement, contracts remain in force for one year, in which case three months' notice of annulment is required. Trade unions are held by law to be financially responsible for losses resulting from a breach of contract and/or illegal strikes instigated by the unions themselves.

The Labour Act recognizes the legality of strikes and lockouts. However, such action is lawful only upon the holding of a general ballot by the organization contemplating such a move. Seven days' notice must be given to the party against whom the strike or lockout is to be directed. Strikes and lockouts must not be resorted to in cases where the dispute is solely about matters coming within the jurisdiction of the Industrial Tribunal, or if their purpose is to force the public authorities to act beyond their duty. The reference here is to political strikes. Sympathy strikes are permitted subject to the same principles.

The Industrial Tribunal

The Industrial Tribunal referred to above was established by the 1938 Labour Act "to give judgment . . . in cases arising out of strikes or lockouts as well as on losses resulting from such actions; . . . and in cases arising from infringement of wage agreements, or disputed interpretation of an agreement or its validity." The Tribunal consists of five members nominated as follows: two, who must be lawyers, are nominated by the Icelandic Supreme Court, one nominated by the Minister of Social Affairs, one by the National Federation of Icelandic Trades Unions and one by the Federation of Employers. The same number of alternate members are nominated and all hold office for three years. Decisions handed down by the Industrial Tribunal are final and cannot be appealed to the Supreme Court.

Actual mediation of labour disputes is conducted by a State mediator and three District mediators appointed by the Minister of Social Affairs. In cases where official mediation proves fruitless the conciliation officer may propose a compromise settlement to be decided upon by a secret ballot of the union members involved in the dispute. If less than a minimum of 20 per cent of the members entitled to vote participate, the compromise proposal must be regarded as accepted.

The Labour Exchange

Under the provisions of a 1935 statute, it is obligatory for a locality to maintain a labour exchange, if the municipal corporation concerned or the Minister of Social Affairs decides that the employment situation in the area merits the establishment of such a bureau. Two-thirds of the cost is borne by the municipality and one-third by the Treasury. The management of each local labour exchange office is composed of a committee of five members. One member, who acts as chairman, is appointed by the Minister of Social Affairs, two are elected by the municipal corporation and the remaining two are chosen by

employer and employee organizations respectively. Through the central labour exchange office located at Reykjavik, regional and local employment problems are surveyed and a national employment and placement policy made to prevail.

Holidays with Pay

A 1943 Act provided for annual leave for any worker employed in the service of others, individuals or public institutions. Two classes of employees, however, were exempted from the provisions of the Act. Apprentices who come under the Skilled Crafts Apprentices Act, and those on fishing craft engaged under the catch-sharing system entirely, are exempted from the operation of this statute.

Employees covered by the Act are entitled each year to leave from their work for a specified time and are paid a set percentage of their wages during this period. An employee taking leave is entitled to receive four per cent of the wages he has earned during the preceding leave year.

To facilitate the operation of this Act, the Government, through the post office, issues leave stamps of varying values and leave books. The employer buys such stamps at face value and affixes them in the employee's stamp book. When the employee goes on leave, he receives from the post office cash to the value of the stamps that have been entered in his book during the year. This legislation is somewhat similar to that in effect in several of the provinces in Canada.

The Act further provides that an employee may not work for wages in his regular occupation or a kindred one while he is on leave. The minimum annual vacation is one day's leave for each month worked during the preceding leave year. However, many employers grant more than this minimum vacation.

Government Support for Home Building

Due to the fact that nearly all building material in Iceland has to be imported, construction costs are relatively high. To help the working classes secure adequate accommodation the Workmen's Dwelling Act of 1929 was enacted. Each town or municipality was permitted to create a building fund for the purpose of granting loans. Such a fund could be established only if a locally elected committee gave evidence to the Minister of Social Affairs that the housing situation in the particular area required official assistance. Revenue for a local building fund was secured by means of a State grant, a grant from the local municipal or parish fund and such other loans as might be negotiated. Loans from the fund could then be made to working men's building societies. Loans could not exceed 85 per cent of the cost of a dwelling, interest rates were set at six per cent but were gradually reduced to four per cent by 1941, and the term of the loan was set at 42 years.

In 1935 the Act was amended to provide a single building fund for the whole country in place of the many local funds. The Act was repealed in 1946 and was superseded by a new statute providing for official assistance for the building of houses in towns and villages under three distinct forms of aid.

To assist with the construction of dwellings for workingmen, a building fund is to be created, divided into departments, one for each town or village in which the Minister of Social Affairs has recognized the need for official assistance in the building of houses. Revenue for the departmental funds is provided for by an annual contribution by each inhabitant or from four to six Kronas,* while the Treasury contributes an equal amount. The parish fund of the parish concerned is responsible for a loan advanced to the local building society.

The management of the building fund is confined to a board of five members, elected jointly by both houses of the Althing (Parliament) on a proportional basis, for a term of four years. This committee is responsible for the over-all administration and direction of the many departmental building funds.

The local building societies thus organized under the authority of the central board may enrol as members those who are residents of the town or village concerned, whose income has not on the average exceeded 7,000 Kr. a year for the past three years and who do not own assets in excess of 10,000 Kr. Buildings thus erected by local building societies must be sold to members at cost price. Loans granted to local societies are secured by first priority mortgages on the dwellings and ground rights, and must not exceed 90 per cent of the cost price of the dwelling. The term of such loans ranges from 42 to 75 years at an interest rate of two per cent.

Official aid for house-building may also be secured by organized co-operative building societies who build for their members on the most advantageous terms. Such groups must conform to the provisions of the Co-operative Societies Act.

* At the time of writing, the Krona is approximately equal to 6½ cents in Canadian currency.

A co-operative building society receives its revenue from two sources: contributions from its membership and loans guaranteed by the Treasury. The co-operative society in making loans to its members establishes terms and conditions as favourable as those affecting the loans it has raised and which have been officially guaranteed.

The 1946 statute provides a third form of housing development assistance. Parishes that satisfy the requirements of the Ministry of Social Affairs may receive extensive State aid for the erection of living quarters in place of units which have been classed as unsanitary.

Social Insurance

Prior to 1936 the only social insurance legislation in effect in Iceland was the Accident Insurance Act. Commencing with 1903, different groups of seafarers were brought within the scope of this Act, till 1909 when it was extended to cover all registered crews. By 1925 accident insurance included the majority of workers on land and sea, the payment of the insurance premium being for the most part defrayed by the employer.

Until 1936 health insurance was organized along the lines of voluntary association and was of small social significance. The Social Security Act of that year was the first inclusive legislation covering the field of health, accident, disablement and old age insurance. The health insurance provisions of the Act were made compulsory only in urban areas, rural centres being permitted to vote upon the establishment of a local health insurance society.

In order to make the provisions of the 1936 Act national and all-inclusive, the Social Security Act of 1946 was enacted. By this Act accident, old age, disablement, health, widow's, children's and maternity insurance were made compulsory for the whole country. The administration of these various branches of social security was centralized in the Social Security Institution.

The two main objects of the Act are to provide a health service, comprising both sickness relief and preventive medicine, and to provide security of income. To prevent disease and to alleviate its consequences, a nation-wide system of preventive hygiene is to be established with the necessary clinics rendering medical aid and treatment.

Sickness relief includes payment in full for any necessary stay in hospital as well as medical treatment, medicine and bandages, etc. Three-fourths of the cost of medical care, including that of specialists, is paid for out-patients.

Though the health insurance section of the 1946 Act is not yet in force, the health section of the Social Security Act of 1936 with amendment from 1943 is in effect. Under this statute health insurance is provided by local sick benefit societies which pay in full the necessary accommodation, medical care and medicine in hospitals. Out-patients receive ordinary medical attendance free, but pay one-fourth of the cost of specialized medical care.

The sections of the 1946 Act that deal with old age, widow's, children's, maternity and disablement insurance recognize the present-day high costs of living. Accordingly, the country has been divided into two price level zones, with allowances in the first zone being larger than those in the second. Furthermore, the above-mentioned allowances are geared to a cost-of-living index, and rise or fall in amount, as the index climbs or declines.

All Icelandic citizens over the age of 67 are eligible to receive a pension of 1,200 Kr. annually if living in the first price level zone and 900 Kr. if resident in the second zone. Married couples, if both are over 67, receive a double pension minus 20 per cent.

The disablement pension program is administered in much the same manner as the old age pensions. Anyone who has lost 75 per cent of his working capacity is entitled to a pension equivalent to an old age allowance. Disablement cases requiring special care or nursing may receive an increased allowance up to 40 per cent of the initial payment.

Under the children's allowance provisions of the Act, payments are made to the children of old age pensioners, to the children of disabled persons and widowed mothers, to orphans, illegitimate children and to the children of divorced mothers. All these payments are made in respect of children under 16 years of age.

Family allowances are paid to families in excess of three children under 16 years of age, and who are not in receipt of children's allowances. If the father is out of work because of accident or illness, and for that reason in receipt of a daily allowance, the family will receive the children's allowance in respect of the first three children.

Maternity allowances are the same throughout Iceland although a distinction is made between working and non-working women. Working women receive a smaller payment but if their pregnancy entails a loss of wages, they are entitled to a special weekly allowance for the six weeks before and after delivery. Married working women receive this allowance only where the husband cannot maintain his family.

The Act provides for two forms of daily allowances: accident and sickness. Accident insurance now covers all wage-earners except those engaged in domestic work. The payments extend for a maximum of 26 weeks for each accident and a standard per diem allowance of 7.5 Kr. has been established.

Sick benefits vary according to the zone the recipient is located in and as between single and married beneficiaries, the allowances being considerably higher for married persons.

Revenue for this extensive social security program is secured by contributions from employers, employees, parochial bodies and State grants. Total annual expenditure for the principal items enumerated is estimated at 71,500,000 Kr. or approximately 4·5 million dollars in Canadian currency.

UNEMPLOYMENT INSURANCE

Selected Decisions of Umpire Under the Unemployment Insurance Act

The decision printed below relates to the benefit rights of apprentices who lost their employment by reason of a stoppage of work due to a labour dispute. Because of its importance it is printed in full.

Held that the apprentices concerned in the appeal lost their employment by reason of a stoppage of work due to a labour dispute between the Ottawa Master Plumbers Association and Local 71 of the United Association of Journeymen and Apprentices of the Plumbing and Pipe Fitting Industry of the United States and Canada, in which dispute they were directly interested and that in addition the appellant, who was also an apprentice, participated therein.—CU-B 622 (October 2, 1950).

DECISION

Summary of the Facts:

The claimant, single, 20 years of age, filed an initial application for benefit on January 23, 1950. He reported therein that he became employed as an apprentice plumber with Band and Cole Limited, Plumbers, etc., Ottawa, Ont., in August, 1947 and that his last day of employment with that firm was January 20, 1950. In the same application, he also reported that he had lost his employment for the following reason:—

> Labour dispute—I was laid off—I am a union member. I had no part in strike decision.

In the separation questionnaire, the employer stated that the claimant was laid off because of "lack of work due to strike".

According to the submissions, the agreement between the Ottawa Master Plumbers Association of which the claimant's employer is a member and Local 71 of the United Association of Journeymen and Apprentices of the Plumbing and Pipe Fitting Industry of the United States and Canada was due to expire on December 31, 1949. Two months prior to the expiration thereof, Local 71 notified the Employers' Association that they intended to ask for a new agreement including a 20 cent wage increase in the hourly rate, two weeks' vacation with pay, compulsory check-off of union dues and improved working conditions. As a result negotiations were carried on between both parties but no settlement was reached. Finally, a general stoppage of work occurred at the premises of approximately 37 employers on the morning of January 3, 1950, affecting 375 workers comprising journeymen, plumbers, plumbers' helpers, steamfitters, steamfitters' helpers and apprentice plumbers.

Upon the evidence before him, the insurance officer disqualified the claimant from receipt of benefit as from January 23, 1950 under Section 39 (1) of the Act for so long as the stoppage of work continued.

From the decision of the insurance officer, the claimant, on February 8, 1950, appealed to a Court of Referees on the following grounds:—

> I am a plumber's apprentice under Government contract. Was laid off due to no work. Was laid off January 20, 1950, and was told not to come back until called. Also was refused Unemployment Insurance.

The claimant's case as well as that of another apprentice, Gerard Jobin, came before a Court of Referees in Ottawa, Ont., on March 7, 1950, but the hearing was adjourned as the Court required additional evidence.

The Court of Referees resumed its hearing of the two cases in Ottawa, on March 16 and 20, 1950. Those who appeared before the Court were the claimants, Barter and Jobin, their representatives Messrs. Leduc, Bruce and Connolly and employers Seasons, McLellan, Band, Erskine and their solicitor, Mr. Laishley. The majority of the Court upheld the decision of the insurance officer but amended the effective date of the disqualification imposed upon Frederick Barter. Their decision reads:—

> The claimants are members of Local 71 of the United Association of Plumbers and Steamfitters of United States and Canada and they are indentured apprentices under the Apprenticeship Act. Accordingly their wages are set by their respective contract with their employer, pursuant to Section 8, subsection (2) of the general regulations under the said Act. Both claimants were aware of the claims being made by Local 71 previous to December 30, 1949, and of the pending labour dispute as well as the impending stoppage of work previous to January 3, 1950. They did not show up for work on January 3, 1950, because of the stoppage of work decided upon for that day. They had been working with Master Mechanics who kept them aware of what was going on, but Barter was also present on December 28, 1949, at the meeting of Local 71 when the stoppage of work was decided upon.
>
> Both of these claimants have been in receipt of strike pay from the Local Union 71 and by not reporting to work on the 3rd of January, 1950, on account of said dispute and stoppage, both lost their employment in that way. It must be noted, however, that Barter was taken on again by the same employer from January 9th to 21st but was laid off on the last-mentioned date for an indefinite period because of the strike. Both sides admit the labour dispute and consequent stoppage of work.
>
> It is contended however on behalf of Local 71 that the claimants are not on strike because they are governed absolutely by the Apprenticeship Act and by their respective indenture and that they are not included in the agreement between the Master Plumbers and Local Union 71.
>
> Consequently they are not affected by Section 39 of the Unemployment Insurance Act.
>
> The majority of this Court believe that it cannot be denied that the claimants are workmen in the plumbing and steamfitting trade and have lost their jobs because of the dispute and stoppage of work. Moreover, that the said agreement does include them by its opening declaration and by Sections 2 (*a*), 9, 10, and 11. As members of Local 71 they are on the same footing as other employees in the trade, in so far as the general purposes of the agreement are concerned and they stand to lose or gain by the dispute or stoppage of work. By paying their dues as members of the Union, they acquire a proprietory interest in the funds of the Union and are thereby financing the strike. They also receive a strike pay. Unless they have some interest in the stoppage of work in some measure, common with the members of Local 71, it would be hard to understand the presence and the strenuous arguments of Mr. Leduc, the business agent, and Messrs. Connolly and Bruce, the two general organizers before us.
>
> We further believe that these claimants have failed to discharge the double onus placed upon them by Section 39, subsection (2).
>
> The work in the shop or other places where these claimants were employed has not been resumed since the 3rd of January, 1950.
>
> The question now before the Court in our opinion should be, therefore, answered in the affirmative and both appeals should be dismissed.
>
> It will be well to recall in the case of Barter that the evidence has shown that he resumed work on January 9 to 21 with the same employer and was laid off on the last-mentioned date by reason of the stoppage of work referred to. Subsequently found work in the same line on March 2, 1950. Consequently in the case of Barter, his disqualification should be for the periods of December 31, 1949 to January 12, 1950, and from January 22, to March 1, 1950, all dates inclusive.

From the decision of the Court of Referees, the claimant, on April 5, 1950, appealed to the Umpire.

CONCLUSIONS:

This case was the subject of two hearings (May 20 and July 4, 1950), at which the claimant was ably represented by Messrs. S. Wolstein and J. Bruce. At the second

hearing, Mr. H. S. Relph, Chief Claims Officer, expressed the views of the Unemployment Insurance Commission.

According to the two union officials, the claimant, as well as all the other apprentices interested in this appeal, had no concern or interest whatsoever in the labour dispute between the Ottawa Master Plumbers Association and Local 71 of the United Association of Journeymen and Apprentices of the Plumbing and Pipe Fitting Industry of the United States and Canada and were merely victims thereof. In their opinion, the apprentices were unemployed due to a shortage of work caused by the strike of the journeymen and as they were bound by the particular conditions of their apprenticeship and under the control of their employers they would not have benefited by the result of that strike. They finally argued that the apprentices were "in the same position as other building tradesmen whose employment was cut off by the strike."

The Chief Claims Officer contended that not only were the apprentices directly interested but they participated in and financed the said dispute.

At the outset of my remarks, I would like to stress the fact that pursuant to subsection (1) of Section 39 of the Act, a claimant is automatically disqualified from receiving benefit "if he has lost his employment by reason of a stoppage of work due to a labour dispute at the factory, workshop or other premises at which he was employed unless he has, during the stoppage of work, become *bona fide* employed elsewhere in the occupation which he usually follows, or has become regularly engaged in some other occupation."

In accordance with subsection (2) of that section, however, he is entitled to relief from disqualification if he proves, and the burden is specifically placed upon him, that he satisfies each of the six following requirements:—

(*a*) That he is not
1. participating in
2. or financing
3. or directly interested

in the labour dispute which caused the stoppage of work; and (*b*) that he does not belong to a grade or class of workers of which immediately before the commencement of the stoppage of work there were members employed at the premises at which the stoppage is taking place, any of whom are

4. participating in
5. financing
6. or directly interested in the dispute.

The claimant is a member of Local 71 which was actively engaged in the labour dispute. This, in itself, is not conclusive evidence of his participation in the dispute. It appears, however, that he was present at the meeting of his local when the strike was decided on by the journeymen and that notwithstanding the fact that his contract of apprenticeship was entered into with his employer, he did not report for work on the morning of the commencement of the strike.

Under the circumstances and notwithstanding the argument of the representatives of the union that pursuant to the trade regulations of the Apprenticeship Act (building trades) a junior mechanic "shall not be obliged to remain with the employer during a strike or lockout," it is my opinion that the claimant identified himself with the labour dispute and that, he must be considered as having been a participant therein.

According to Form UIC 743A (Report on Industrial Dispute Commencement) which is on file, the cause of the strike was the refusal of the employers to meet the demands of the union for a new agreement which would include the following changes:—

1. Increase in hourly rate of 20 cents
2. Two weeks' vacation with pay
3. Employer supply all tools
4. Retention of old city limits for starting and quitting time
5. Compulsory check-off in union dues. Double time on Saturdays.

I am satisfied that as the plumbers' apprentices in Ottawa were paid a flat rate of wages in accordance with their contract of apprenticeship, they would not have benefited by an increase in the rate of wages given to the journeymen.

The employers, however, who appeared before the Court of Referees, emphatically stated that any increase in the vacation period with pay would also apply to the apprentices. Furthermore, as in accordance with the Apprenticeship Act the hours of employment for apprentices have to be the same as those of journeymen engaged in the trade, they would certainly have been affected by any change in the "starting and quitting time" of the journeymen. Finally, it is hard to conceive that if the journeymen's demand for "double time on Saturdays," was granted, the apprentices would not have benefited accordingly.

As to the union officials' argument that the apprentices "were in the same position as other building tradesmen whose employment was cut off by the strike," I cannot agree for the obvious reason that neither

were the latter's conditions of work regulated in any way by the bargaining agreement between the employers and Local 71 nor had they anything to do directly or indirectly with the strike.

Under the circumstances, I consider that all the apprentices concerned in this appeal were directly interested in the labour dispute between the Ottawa Master Plumbers Association and Local 71 of the United Association of Journeymen and Apprentices of the Plumbing and Pipe Fitting Industry of the United States and Canada. Having decided also that the claimant participated in the said labour dispute, it is quite unnecessary for me to go into the question as to whether the claimant or the other apprentices financed the dispute or belonged to a grade or class of workers within the meaning of paragraph (*b*) of subsection (2) of Section 39 of the Act.

The appeal is dismissed.

(Sgd.) ALFRED SAVARD,
Umpire.

Dated at Ottawa, Ont., this 2nd day of October, 1950.

Unemployment Insurance Statistics, November, 1950*

The monthly report issued by the Dominion Bureau of Statistics on operations under the Unemployment Insurance Act states that during the month of November, 1950, initial and renewal claims for benefit filed at local offices of the Unemployment Insurance Commission amounted to 93,016. This represents a seasonal increase over the October total of 62,243 but a considerable reduction from the November, 1949, level of 114,888 claims.

A similar seasonal increase is exhibited in the number of ordinary claimants on the live register. In November there were 124,794 ordinary claimants on the live register as compared with 90,301 in October and 152,269 in November, 1949.

Of the 138,583 active claimants (ordinary, short-time and casual) on the live register on the last day of the month, 91,813 or 66 per cent were on the register seven days or more. This represents a percentage decline from last month, when 70,902 or 70 per cent of a total of 101,924 active claimants were in this category.

A total of 82,319 initial and renewal claims were adjudicated during the month. Claims allowed numbered 64,562, while those disallowed or disqualified totalled 17,757. In addition, 9,430 revised claims were disqualified.

Claims disallowed (because of insufficient contributions) numbered 8,854. Chief reasons for disqualification were as follows: "voluntarily left employment without just cause" 4,669 cases; "not unemployed" 2,472 cases; "not capable of and not available for work" 1,225 cases.

* *See* Tables E-1 to E-7.

Persons commencing benefit on initial and renewal claims in November numbered 49,532. This represented an increase over the total for the previous month (33,772) but a considerable decrease from the total for the same month last year (63,702).

During the month of November a total of $4,184,103 was paid in respect of 1,781,566 days, as compared with $3,570,904 and 1,540,670 days in October, and $5,048,373 and 2,178,130 days in November, 1949.

For the week of November 25 to December 1, 79,052 persons received $1,052,948 in respect of 439,993 days. This represents a moderate increase over the total of 65,682 persons, $858,376 and 369,286 days for the week of October 28 to November 3.

Average weekly duration of benefit of 5·6 days for the week of November 25-December 1, was unchanged from the week of October 28-November 3. The amount of weekly benefit, however, increased from $13.07 for the week of October 28-November 3 to $13.32 for the week of November 25-December 1.

Insurance Registrations

Reports received from local offices of the Unemployment Insurance Commission showed that during November, 1950, insurance books were issued to 3,944,985 employees who had made contributions to the Unemployment Insurance Fund at one time or another since April 1, 1950. This was an increase of 89,048 since October 31, 1950.

As at the end of November, there were 241,506 employers registered.

Employment Conditions

An analysis of the current employment situation prepared by the Economics and Research Branch, Department of Labour, on the basis of returns from the National Employment Service, reports from the Dominion Bureau of Statistics, and other official information.

December 1950 . . .

. . . saw an accentuation of trends that had become apparent in November; that is, a seasonal employment decline in many industries, accompanied by expansion in some sectors of manufacturing in response to defence needs. As a result, with a growing surplus of unskilled workers on one hand, on the other, more skilled workers of certain types were required than were available, especially in the metal-working trades. In the highly industrialized provinces of Ontario and Quebec, these shortages were more apparent than in the other regions.

Seasonal unemployment continued to grow during December. The onset of winter brought about further lay-offs of workers in construction, transportation and fishing. The increase was offset in part by continued hiring in the manufacturing industries of the central provinces and a steady demand in Eastern Canada for woods workers. At the beginning of the year, however, the number of those seeking work had increased substantially. Most of these were unskilled and semi-skilled workers and, for those without factory or woods experience, there was little prospect of steady employment until spring.

By January 4, the total number of applications for work at National Employment Service offices were 248,100, or 4·8 per cent of the civilian labour force. Comparison with the total at December 21 shows that applications increased by 33,000 during this two-week period, distributed equally across the country. An increase of 4,000 applications from female workers in the week ending January 4 reflects the lay-off of Christmas help in the retail trade. About 85 per cent of all those applying for jobs were covered by unemployment insurance.

The current employment situation had altered considerably from that of last year at this time. There were over 50,000 fewer applications for jobs and employers have been listing a greater number of vacancies with the NES. Average weekly salaries and earnings in the eight leading industries had increased by almost 6 per cent since the previous year to total $46.39 at November 1. In the same period, total labour income had increased by 9 per cent; by November 1, for all Canada it amounted to $723 million. Average hours being worked per week in manufacturing which totalled 43 at Novmeber 1, showed signs of a slight upward trend over the year.

The scarcity of materials, mainly steel, did not prevent the expansion of employment in manufacturing during December. More workers were absorbed into many industries, particularly aircraft firms and foundries, and the letting of substantial defence contracts gave promise of increased hirings in the near future. The immediate need was for skilled workers. The demand for tool and die makers, machinists, draftsmen and welders was particularly strong.

At the end of 1950, much work remained to be done in the woods. The combination of heavy snow in northern Ontario and wet weather in the Maritimes has delayed operations, causing operators to extend their cutting season beyond the normal dates. Although most camps had complete staffs, the turn-over of labour was heavy, and there was still a steady demand for experienced men.

Regional Analysis

In ***Newfoundland***, most fishing activity ended during December, construction slackened and ice in harbours in the northern half of the province brought coastal navigation in those parts to a close. Consequently, employment in wholesale trade and dock work was also reduced. Woods employment on the other hand remained much higher than last year and a continuing high rate of labour turnover resulted in a wide distribution of income from this employment. Iron mines on Bell Island

have been operating steadily with two shifts each. On balance, it appeared that conditions in Newfoundland this winter were considerably less severe than last year. Job applications on hand at NES offices totalled 4,200 at the end of December as against 9,100 a year earlier.

In the ***Maritimes,*** employment conditions contrasted sharply with those that existed last year at the same time when, as well as the usual seasonal slackening, woods activity had been considerably curtailed by loss of United Kingdom markets. Applications for work at NES offices totalled 23,900 at December 28, 1950. Many of these workers had been engaged in construction or fishing, and were seeking alternative winter jobs. Woods activity in both Nova Scotia and New Brunswick, although hampered by soft ground conditions because of the mild weather, was already providing employment for hundreds of men and demand for workers would likely be accelerated with hauling in January. The shipbuilding and railway rolling stock manufacturing industries were also in a considerably better position than last year as far as orders were concerned, although steel shortages might cause difficulties in the future.

Employment conditions in the ***Quebec*** region, as in the Maritimes, were much better in December, 1950, than they were a year ago. Activity was well maintained in woods work, mining and most phases of manufacturing. A relatively high level of construction employment continued, especially for skilled tradesmen. Some construction workers however, along with dock workers, freight handlers, seamen and farm workers were seeking winter jobs. Registrations at NES offices rose to 71,000 at the end of December but were still 17,000 below those at the same time last year.

The strong demand for experienced pulp cutters throughout the region was only slightly eased during December by the release of additional workers from farming and construction and the completion of some cutting programs. In other areas, where shortages of cutters have been acute, extended cutting seasons were anticipated.

Manufacturing output and employment in the region reached the highest point of the year in December. Had it not been for the uncertainty created by shortages of materials and the growing scarcity of key skills, even further expansion might have resulted. This was especially true in and around Montreal, where heavy iron and steel industries in particular were handicapped by the tight materials and skilled manpower situation. Defence orders for electronic equipment, chemicals, aircraft and aircraft parts, as well as for military clothing, have already been distributed in this area and substantial hiring was expected.

In the ***Ontario*** region, unusually favourable employment conditions prevailed, in spite of some seasonal curtailment in construction, water transportation and certain sectors of manufacturing. As a result, the total of 53,000 job applications filed with the NES at the end of the month was 6,000 greater than at December 1, although considerably lower than at the same time last year.

Although expansion of manufacturing output and employment was made difficult by shortages of steel, these were not sufficiently severe or widespread to reduce the overall level of employment in Ontario manufacturing. The aircraft industry continued to hire extensively, foundries throughout the regions showed slight increases in employment, and the electrical apparatus chemicals, rubber, leather and textile industries in general maintained normal activity with expansion reported in some areas.

Although cutting programs were well advanced by the end of the month and hauling was expected to begin early in January, the larger woods operators in northern Ontario continued to seek experienced cutters. Some were still awaiting the arrival of immigrant woods workers to expand their operations.

In the ***Prairie*** region, employment opportunities slackened considerably during December and active registrations at NES offices rose by 7,000 during December to total 37,000 at the end of the month. The leading factor contributing to the lower level of activity was the release of workers from the construction and meat-packing industries. Temporary clerks were also released from retail stores after Christmas.

Generally, unemployment was higher than last year in the north and centre of the region and lower in the eastern section. Because of the greatly increased pulp cutting program, conditions at the Lakehead were much better than a year ago. In the west, particularly in centres on the Regina plains and along the north Saskatchewan valley, registrations showed a considerable increase over the comparable 1949 levels. Part of the increase was due to the effect of the early and severe winter upon the construction industry, but some could be attributed to the lower cash income of farmers. The consequent lower purchasing power had a noticeably depressing effect on retail trade in those areas during December.

In the ***Pacific*** region, operations in nearly all industries reached a low ebb during the month of December, but the employment situation was generally better than in the same period during the past two years. Favourable weather made possible a comparatively high level of logging and construction activity and, due to the higher income from all sectors and the prospect of continued logging employment, retail sales for the month were much greater than expected. Active registrations at NES offices were 13 per cent lower than the comparable total in 1949. During the month, however, registrations increased by 7,000 to a total of 37,000 at December 28.

The increase was largely in forestry occupations and occurs annually when logging camps and sawmills shut down for alterations and repairs over the Christmas holiday period. Prospects appeared bright for the logging industry in the coming year with both domestic and export demand at record heights. After set-backs in the fall, shingle mills were increasing production. With mild weather, the construction industry was still relatively active. Full time employment in coal mining was maintained during the month but stocks on hand were increasing with continued mild weather.

Industrial Analysis

Some seasonal curtailment of employment in the ***manufacturing*** industries took place during December as the annual peak of activity passed but this was offset in part by the upward cyclical employment trend.

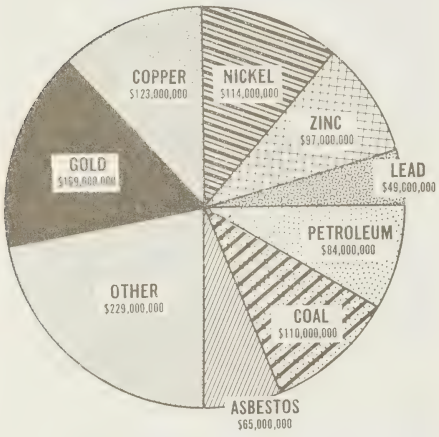
Industries in their active period during December included those producing some primary textiles, tobacco, agricultural implements, non-ferrous metal products, meat products and furniture. The automobile and parts industry was busy in December also, but a lay-off of nearly 4,000 workers due to re-tooling by one of the major producers reduced the numbers actually at work. The above groups constituted about 25 per cent of the working force in all the manufacturing industries, or about 300,000 persons.

On the other hand, several of the manufacturing industries were in their slack period in December. In particular, declines in employment took place in the food products, clothing and sawmill industries. In other manufacturing industries, employment declines at the year-end have been usual but not extensive. On the whole, therefore, an increase in unemployment occurred during December among workers usually associated with manufacturing firms.

The total number of applications for manufacturing employment on hand with the NES at the end of the month was slightly less than 50,000, an increase of about 10,000 during the month. This increase was about equally divided between skilled and unskilled groups. Among both these, new applications were heaviest in the food, secondary textile, lumber and metal-working trades.

Employment in the ***logging*** industry in Eastern Canada reached its yearly peak in the first week of December and subsequently began to decline. This decrease in the number at work in the woods was due in part to the completion of cutting in some camps but also to the movement of loggers back home for the Christmas holiday season.

The number of loggers employed by the Canadian Pulp and Paper Association member companies, which control the larger part of pulpwood logging in the East, reached a peak of 67,250 at December 3. This represented an incerase of nearly 60 per cent over last year's peak. By December 23 of 1950 the number reported at work had declined to about 56,000.



Although British Columbia logging continued at a high level in most areas during the first three weeks of December, nearly all camps closed then for holidays until the first week in January. Logging conditions were generally good both in the mainland coastal areas and on Vancouver Island and were excellent in the Northern Interior. A high degree of optimism prevailed throughout the entire logging industry and, if weather conditions remained favourable, a heavy demand for loggers was anticipated shortly after the New Year.

December brought to a close the most active year in the history of the Canadian ***mining*** industry, both in terms of value of production and of labour force employed. Preliminary estimates made by the Dominion Bureau of Statistics placed the gross value of mineral production for 1950 at $1,040,000,000. Employment in all sections of the industry was in the neighbourhood of 90,000 during the year.

The greatest expansion during the year was in the non-metallic group. The index of employment in the industry reached a high of 197·2 at October 1 (June 1, 1941=100), compared to 168·9 one year earlier. This employment increase was principally due to increased activity in petroleum and asbestos mining. The annual value of asbestos production reached an all-time high of $65,000,000 and petroleum production increased from 21,000,000 barrels to 29,000,000.

In the metal mining industry, gold, copper, zinc and nickel all showed improvement over 1949 levels. The index of employment in this sector of the industry is indicated by the rise in the employment index from 92·4 to 98·0 (June 1, 1941=100) in the twelve-month period following October 1, 1949. The estimated value of all metals produced during 1950 was $621,000,000.

MINERAL PRODUCTION IN CANADA
1950

A moderate decline in both production and employment in the coal mining industry took place during 1950. About 23,000 persons were reported as employed in Canadian coal mines in the fall of the year, a drop of 1,500 from 1949. The decline in production was relatively less; coal output for 1950 was estimated at 19,000,000 tons compared with 19,120,000 in 1949.

The rapid post-war expansion in the ***service*** industries was tapering off in the latter part of 1950, according to the latest labour force statistics. The number of persons employed in the industry was recently estimated at 900,000, compared to about 750,000 at the end of 1945. In the past year, there was only a moderate expansion in the industry's labour force, apart from the short-run fluctuations which occurred in the personal service sector.

By type of work, the total labour force was distributed as follows: public service, 259,000; government service, 279,000; recreational service, 25,000; business service, 56,000; personal service, 276,000. Over the last year, there has been a moderate increase in public and business service employment and a slight downward tendency in the personal service group.

There was a marked increase in male applications for employment in the personal service occupations at NES offices during December, although at the same time there was a decline in female registrations. This was chiefly due to the demand for extra workers around the Christmas season in occupations in which women predominate, such as waitresses and domestic help. Male applications were concentrated in such occupations as protective service and building service, which showed a substantial increase over the month.

In the ***construction*** industry, seasonal lay-offs during December were less extensive than in the same month last year, due to the heavy backlog of work in the industry and the high volume of winter work being carried on as a result. This decline in winter unemployment has taken place in spite of the continued expansion in the size of the construction labour force. At the peak this year, it was estimated that the working force in the industry totalled about 380,000, nearly 20,000 above the high point in 1949.

There was, however, a substantial increase in the number of live applications for construction work registered with the National Employment Service during December. At the first of the month, the figure was 21,000, which increased to 37,000 by December 28. In 1949, the comparable figures were 27,000 and 45,000.

Among the skilled trades the two largest groups registered were carpenters, and painters. These were also the two largest occupational groups in the industry's labour force. In proportion to the number employed, winter unemployment has usually been heaviest amongst bricklayers and cement finishers and similar trades where work is restricted by weather conditions, but this tendency was not apparent in December. There were 13,000 applications from unskilled construction workers on file at December 28.

Employment Service Activities

Although hampered by the seasonal decline, placement activity at employment offices continued fairly strong during most of December. Hiring was active for the Christmas trade in stores, in the post office, and in some service establishments. The influx of seasonal workers continued but few of those released were suitable for this type of work; students and women made up the bulk of the temporary Christmas working force.

Applications from men increased at a rate of 10,000 or more a week from the middle

of November to December 28. Applications from women during December dropped by about 8,000, in part the result of Christmas hiring and partly because of the regulations regarding the eligibility of married women for unemployment insurance benefits.

Registrations on hand from skilled and semi-skilled workers rose at approximately the same rate as those from the unskilled group, although it was probable that within the first group the increase was mainly among the semi-skilled.

More handicapped workers were being placed this year than a year ago, another indication of the more active labour market. Efforts were being made by special placement officers to discourage youths from leaving school after one or two years secondary school education; those who have done so often have presented a difficult placement problem.

PRICES AND THE COST OF LIVING*

Cost-of-Living Index

The Dominion Bureau of Statistics urban cost-of-living index advanced from 171·1 to 172·5 between December 1, 1950 and January 2, 1951. All group indexes, except rents, registered increases between these dates. Foods advanced 1·4 points to 220·2, as a result of higher prices for meats, butter, vegetables and fruits. These increases were sufficient to overcome a sharp seasonal drop in eggs of nearly eleven cents per dozen. The clothing index moved from 184·9 to 187·1, following higher prices concentrated mainly in men's wear. The largest group index increase was shown for home furnishings and services, which rose 3·4 points to 179·8. The more important advances in this group were registered by furniture, carpets, blankets, laundry and telephone rates. Fuel and light moved up 0·8 point to 141·5, largely owing to higher prices for coal. The index of miscellaneous items increased from 134·1 to 135·8, influenced by higher quotations for health care, barbers fees, gasoline, street car fares and newspapers. Rents were unchanged at 136·4.

From August 1939 to January 1951, the increase in the cost-of-living index was 71·1 per cent.

Cost of Living in Eight Cities

Seven of the eight regional city cost-of-living indexes registered increases between November and December. Halifax receded 0·1 to 159·0. Among groups food prices registered narrow changes in eastern Canadian centres while prices were higher in western centres. This reflected mainly sharp seasonal increases for eggs in the west. Home furnishings and services indexes were higher at all centres as also were clothing prices. The indexes for miscellaneous items were unchanged to narrowly higher while fuel and lighting costs were unchanged. Rentals also remained unchanged since they were not surveyed in December.

Composite city index increases between November 1 and December 1 were as follows: Edmonton 1·5 to 166·4; Vancouver 0·9 to 172·6; Saskatoon 0·9 to 169·6; Winnipeg 0·9 to 166·2; Montreal 0·5 to 175·3; Toronto 0·3 to 167·2 and Saint John 0·1 to 167·6.

Wholesale Prices, November, 1950

The General Wholesale Price Index recorded an all-time high in November 1950, moving up 1·4 points from the October level to 174·0. All groups registered increases with the exception of Non-metallic Minerals which declined 1·5 points to 141·7. Non-ferrous Metals recorded the largest gain, advancing 3·4 points to 176·4. Wood Products followed with an increase of 3·2 points to 213·4. Textile Products advanced 3·1 points to 197·7 and Animal Products moved up 2·3 points to 184·0. Fractional increases were recorded for the remaining three groups. Chemical Products at 130·8 registered a point increase of 0·9 over the October level. Vegetable Products and Iron Products moved up 0·4 each to 149·1 and 189·6 respectively.

Among price increases recorded by selected commodities between October and November, the following were noted: eggs, Grade "A", Calgary, 21·2 per cent, solder 20·0 per cent, tin ingots 19·6 per cent, soya-bean oil 19·4 per cent, zinc sheets 18·3 per cent, raw rubber 16·1 per cent, hessian 15·9 per cent, wool blankets 15·0 per cent, worsted yarn, 4 ply, 13·3 per cent, cheese, No. 1 white, Montreal, 12·7 per cent, men's woollen underwear 12·4 per cent. Price decreases were recorded for the following items in the same period: gasoline, Regina, 17·5 per cent, onions, Toronto, 16·6 per cent, red cedar shingles 12·5 per

* *See* Tables F-1 to F-6.

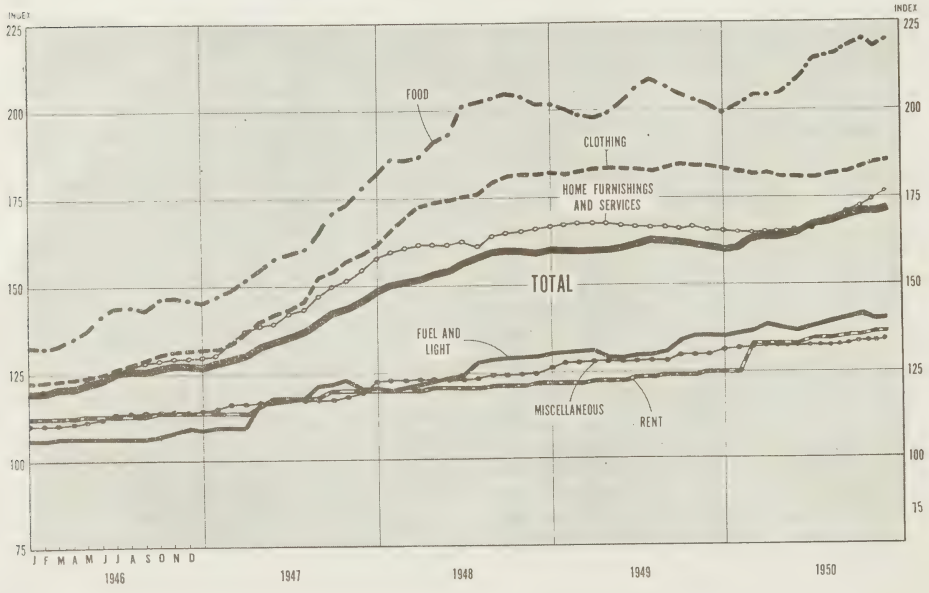
cent, lard, Vancouver, 9·8 per cent, green coffee beans, Santos, 9·4 per cent, gluten feed 8·6 per cent, potatoes 8·1 per cent, ham, Vancouver, 7·7 per cent, eggs, Grade "A", Toronto, 7·1 per cent.

The Canadian Farm Products wholesale price index rose 1·2 points to 142·5 from October to November. The Animal Products group rose 3·2 points to 207·7, as higher prices for raw wool, hides and skins, eggs and fresh milk outweighed a small decline in livestock.. A drop of 0·1 point to 103·5 in Field Products was due to declines in onions and potatoes.

Changes in Prices Tables

Beginning with next month's issue, certain changes will be made in the prices tables published monthly in the LABOUR GAZETTE.

Food.—As part of a program modifying the procedure used in calculating the cost-of-living index, the Dominion Bureau of Statistics is reducing its sample of cities from which food prices are collected from sixty-four to thirty-four. As of January 1951, the present list of sixty-four cities is being reduced to thirty-three and St. John's, Newfoundland, is being added for the first time. While prices will be collected in Newfoundland, they will not be included in the Dominion cost-of-living index until the revision now under way is completed.



This reduction in sample size will contribute materially to speed and economy of operation without affecting index accuracy. Tabulation work required to include sixty-four cities is such that the cost-of-living index is not published until the fourth day of the month following, whereas under the new procedure it is planned to release the index in the month to which it applies. Extensive tests have established that a food index calculated from prices in thirty-three cities is as accurate as one obtained from sixty-four cities.

As a result of this action, price averages of specified foods will be published in the LABOUR GAZETTE, starting with the March issue, for thirty-four rather than sixty-four cities.

Rent.—Since November, 1947, the Dominion Bureau of Statistics has been collecting at quarterly intervals, records of rents paid by a sample of households in urban areas all across Canada. The aggregate rent paid by a group of households in a given month is compared with the aggregate rent paid by the same group for the same living quarters in the next month. With a matched sample such as this, variations due to changes in the sample and to non-response are eliminated, and the result is a reliable measure of the change in rent paid for comparable accommodation. Rent reported is cash rent paid in all cases,

COST OF LIVING IN CANADA FROM JANUARY 1946

(1935-39=100)

regardless of minor changes in the services provided. Rent for commercial properties is specifically excluded.

The foregoing record of change in rents obtained directly from a scientific sample of households is considered more accurate than previous records (now being published in the GAZETTE), which are based mainly on realtors' lists of rental properties, and which have become much smaller in recent years. As a result, this latter record is being discontinued and household sample data will now provide the sole source of rent information. While this material provides accurate individual measurements information for larger cities, the household sample is not large enough to give reliable comparisons for smaller cities and towns. Therefore, commencing with prices for January, 1951 (to be published in the March issue), average rent ranges for certain cities as presently published in the LABOUR GAZETTE will be discontinued. Instead a table of rent indexes for eight cities will be published to provide an idea of trends in some of the larger regional centres. In the case of Saskatoon, which is one of the eight cities, the household sample has been especially enlarged for this purpose.

STRIKES AND LOCKOUTS*

Canada, December, 1950

There was little strike activity during the month, the time loss being the lowest recorded for any month since June, 1945.

Preliminary figures for 1950 show 137 strikes and lockouts, the same number as in 1949. The trans-Canada railway strike in August, 1950, which involved some 125,000 workers, was instrumental in bringing the total of workers on strike in 1950, 187,000, to the second highest figure of any year in the records of the Department. In 1943, when the greatest number of strikes and lockouts, 402, was recorded, the number of workers involved in stoppages, 218,404, was the highest of any year on record. The time lost in 1950 was higher than in 1949 by some 325,000 days, but in six previous years, 1911, 1919, 1922, 1945, 1946 and 1947, the time loss was greater than in 1950. The railway strike was responsible for a million days of the total loss in 1950, 1,400,000 days.

In 1950, preliminary figures show 137 strikes and lockouts, involving 186,981 workers, with a time loss of 1,389,234 man-working days. In 1949, there were 137 strikes and lockouts, with 51,437 workers involved and a loss of 1,063,667 days.

Preliminary figures for December, 1950, show 13 strikes and lockouts in existence, involving 2,562 workers, with a time loss of 8,438 days, as compared with 17 strikes and lockouts in November, 1950, with 13,714 workers involved and a loss of 49,125 days. In December, 1949, there were 15 strikes and lockouts, involving 3,197 workers and a loss of 24,039 days.

Based on the number of non-agricultural wage and salary workers in Canada, the time lost in December, 1950, was 0·01 per cent of the estimated working time; 0·06 per cent in November, 1950; 0·03 per cent in December, 1949; 0·14 per cent for the year 1950; and 0·11 per cent in 1949.

Of the 13 strikes and lockouts in existence during the month one was settled in favour of the workers, four in favour of the employers, four were compromise settlements and two were indefinite in result, work being resumed pending final settlement. At the end of the year two strikes were recorded as unterminated, namely, cotton and rayon underwear factory workers at Sherbrooke, P.Q., and coal miners at Lethbridge, Alta.

The record does not include minor strikes such as are defined in another paragraph nor does it include strikes and lockouts about which information has been received indicating that employment conditions are no longer affected but which the unions concerned have not declared terminated. Strikes of this nature which are still in progress are: compositors, etc., at Winnipeg, Man., which commenced on November 8, 1945, and at Ottawa and Hamilton, Ont., and Edmonton, Alta., on May 30, 1946; textile products factory workers at St. Lambert, P.Q., August 29, 1949; printers at St. John's, Newfoundland, May 22, 1950; electrical apparatus factory workers at Vancouver, B.C., May 11, 1950; laundry machinery factory workers at Toronto, Ont., June 16, 1950; and cleaners and dyers at Toronto, Ont., October 4, 1950. The strike of department store clerks at New Westminster, B.C., which commenced on August 27, 1949, was called off by the union on January 2, 1951.

* *See* Tables G-1 and G-2.

Great Britain and Other Countries

The latest available information as to strikes and lockouts in various countries is given in the LABOUR GAZETTE from month to month. Statistics given in the annual review issued as a supplement to the LABOUR GAZETTE for April, 1950, and in this article are taken as far as possible, from the government publications of the countries concerned.

Great Britain and Northern Ireland

The British *Ministry of Labour Gazette* publishes statistics dealing with disputes involving stoppages of work and gives some details of the more important ones.

The number of work stoppages beginning in October, 1950, was 116 and eight were still in progress from the previous month, making a total of 124 during the month. In all stoppages of work in progress in the period there were 40,300 workers involved and a time loss of 246,000 working days was caused.

Of the 116 disputes leading to stoppages of work which began in October, six, directly involving 8,100 workers, arose out of demands for advances in wages, and 52, directly involving 4,700 workers, on other wage questions; two, directly involving 100 workers, on questions as to working hours; 25, directly involving 4,800 workers, on questions respecting the employment of particular classes or persons; 27, directly involving 8,500 workers, on other questions respecting working arrangements; three, directly involving 100 workers on questions of trade union principle; and one, directly involving 100 workers, was in support of workers involved in another dispute.

New Zealand

For the second quarter of 1950, figures show 44 strikes, involving, directly and indirectly, 28,614 workers, and causing a time loss of 28,407 man-days.

United States

Preliminary figures for November, 1950, show 250 strikes and lockouts beginning in the month, in which 160,000 workers were involved. The time loss for all strikes and lockouts in progress during the month was 1,750,000 man-days. Corresponding figures for October, 1950, are 525 strikes and lockouts, involving 180,000 workers with a time loss of 2,450,000 days.

(Concluded from page 146)

logging has been one of the major factors responsible for the reduction in seasonal unemployment well below that of last year. At the beginning of February, applications for jobs at National Employment Service offices totalled 292,600, about 69,600 below the number on file last year at this time.

IN BRIEF . . .

Cash income of Canadian farmers in 1950 is estimated at $2,169,251,000 in 1950, a decline of 12 per cent from the preceding year's total. . . . Canadian production of steel ingots moved to higher levels in November and the first 11 months of 1950. The month's output amounted to 279,754 tons, an increase of 10·5 per cent above the total a year before. . . . Production of electric energy by Canada's central electric stations reached an all-time record of 50,795,294,000 kilowatt hours in 1950, an increase of almost 9 per cent over the previous year's total. . . . The number of houses completed during the first nine months of 1950 totalled 59,500 units, compared with 63,000 in the same period of 1949. Prices of materials in the same period increased by 15 per cent.

NOTE.—Latest figures subject to revision. Many of the statistical data in this table are included in the Canadian Statistical Review issued by the Dominion Bureau of Statistics.

† Comparable statistics are not available.

(1) Population figures are as at the first day of September 1, for 1950, 1949 and June 1, for 1948, 1944, 1939.

(2) Labour Force Survey figures given are as at November 4, 1950, October 29, 1949, November 20, 1948. Detailed figures for November 1950 will be found in tables A4–A8 of this issue.

(3) Average 1926=100.

(4) Real earnings computed by dividing index of average weekly earnings of wage-earners in manufacturing by the cost-of-living index; base: Average for 1946=100.

(5) Newfoundland is included after April 1, 1949.

(6) Average 1935–39=100.

(7) Year end figures.

(8) Figures for 1939–44 are production data rather than shipments.

[1] Includes iron and steel, non-ferrous metals, electrical apparatus, lumber, musical instruments and clay, glass and stone products. The non-durable group includes the remaining manufacturing industries, as listed, with the exception of electric light and power. [2] Mainly hotels and restaurants and laundry and dry-cleaning plants.

TABLE C-6.—HOURS AND EARNINGS IN MANUFACTURING

(Hourly-Rated Wage-Earners) SOURCE: Average Hours Worked and Average Hourly Earnings, D.B.S.

Tables C-6 to C-9 are based on reports from a somewhat smaller number of firms than Tables C-1 to C-4. They relate only to wage-earners for whom statistics of hours of work are also available, whereas Tables C-1 to C-4 relate to salaried employees as well as to all wage-earners of the co-operative firms.

* Durable manufactured goods industries.

[1] Based upon June 1, 1941, as 100 p.c., the index numbers of average hourly earnings of wage-earners employed by eight establishments manufacturing heavy electrical apparatus are as follows; 1950, Sept. 1, 251·2; Oct. 1, 251·0; and Nov. 1, 254·5; 1949, Nov. 1, 231·1.

[2] Chiefly street and electric railways. [3] Formerly lumber products. [4] Formerly rough and dressed lumber.

TABLE C-10.—EARNINGS, HOURS AND REAL EARNINGS FOR WAGE EARNERS IN MANUFACTURING INDUSTRIES IN CANADA

SOURCE: Hours Worked and Hourly and Weekly Wages D.B.S. Real Wages Computed by the Economics and Research Branch, Department of Labour.

Note: Average Real Weekly Earnings were computed by dividing the index of the cost of living into an index of the average weekly earnings, both indexes having been calculated on a similar base (Average 1946=100).

Date	Average Hours Worked per Week	Average Hourly Earnings	Average Weekly Earnings	Index Numbers (Av. 1946=100)		
				Average Weekly Earnings	Cost of Living	Average Real Weekly Earnings
		cts.	$			
Monthly Average 1945	45·0	69·4	31.23	103·3	96·7	106·8

Above food prices are simple averages of prices reported. They are not perfectly comparable in all cases, with price averages for earlier years. Changes in grading, trade practices etc., occur from time to time.

(a) Rental ranges shown above are indicative of prevailing rents being paid. They should not be used as a measure of change in rents paid for the same quality of living accommodation over long periods of time. (b) Averages include prices for cuts with bone in. (c) Including butts. (d) Mixed—hock-off and hock-on. (e) Mixed—carton and loose. (f) Loose. (g) Estimate. (i) Mixed—California and Australian. (k) Pure. (m) 360's. (n) Mixed—package and bulk. (p) Package. (s) Mixed—choice and fancy. (t) Tin.

* Preliminary figures.

‡ Strikes unterminated at the end of the previous year are included in these totals.

† The record of the Department includes lockouts as well as strikes but a lockout, or an industrial condition which is undoubtedly a lockout, is not often encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout included as such in the records of the Department is a cessation of work involving six or more employees and lasting at least one working day. Strikes of less than one day's duration and strikes involving less than six employees are not included in the published record unless ten days or more time loss is caused but a separate record of such strikes is maintained in the Department and these figures are given in the annual review. The records include all strikes and lockouts which come to the knowledge of the Department and the methods taken to obtain information preclude the probability of omissions of strikes of importance. Information as to a strike involving a small number of employees or for a short period of time is frequently not received until some time after its commencement.

TABLE G-2.—STRIKES AND LOCKOUTS IN CANADA, DECEMBER, 1950 (1)

Industry, Occupation and Locality	Number Involved		Time Loss in Man-Working Days	Particulars(2)
	Establishments	Workers		
Strikes and Lockouts in Progress Prior to December, 1950				
MANUFACTURING—				
Textiles, Clothing, etc.—				
Cotton and rayon underwear factory workers, Sherbrooke, P.Q.	1	40	500	Commenced May 11; for a new agreement providing for increased wages, following reference to court of referees; partial return of workers, unterminated.
Weavers and spinners, Grand'Mere, P.Q.	1	41	250	Commenced October 2; inter-union dispute re bargaining agency; employment conditions no longer affected by the middle of December; indefinite.
Metal Products—				
Wire rope and cable factory workers, Lachine, P.Q.	2	164	300	Commenced September 5; for a new agreement providing for increased wages, 42½-hour week with the same take-home pay as for 45 hours, and adjustment of minor grievances, following reference to conciliation board; terminated December 4; return of workers and replacement; in favour of employers.
Metal factory workers, Fort Erie, Ont.	1	87	650	Commenced September 27; for a new agreement providing for increased wages, reduced hours, and revision of incentive plan; terminated December 12; return of workers pending reference to conciliation board; indefinite.
Steel products factory workers, Montreal, P.Q.	1	1,000	3,500	Commenced October 31; for a new agreement providing for increased wages, reduced hours, increased union security, sickness and accident insurance, pension plan, extension of vacations with pay, etc., following reference to conciliation boards; terminated December 5; conciliation, provincial, and negotiations; compromise.
CONSTRUCTION—				
Buildings and Structures—				
Carpenters and labourers, Cornwall, Ont.	2	40	40	Commenced November 23; for dismissal of foreman, following dispute with a carpenter; terminated December 1; negotiations; in favour of employer (see later strike).
TRADE—				
Garage workers, Brandon, Man.	4	52	100	Commenced November 23; for a new agreement providing for increased wages, following reference to conciliation board; terminated December 4; return of workers; in favour of employers.

TABLE G-2.—STRIKES AND LOCKOUTS IN CANADA, DECEMBER, 1950 [1]

Industry, Occupation and Locality	Number Involved		Time Loss in Man-Working Days	Particulars[2]
	Establishments	Workers		
Strikes and Lockouts Commencing During December, 1950				
MINING—				
Coal miners, Lethbridge, Alta.	3	407	2,000	Commenced December 21; protest by contract miners against pushing cars to coal face; partial return of workers, unterminated.
MANUFACTURING—				
Textiles, Clothing, etc.—				
Textile factory workers, Cornwall, Ont.	1	445	400	Commenced December 4; protest against removal of time-study checkers in carding room; terminated December 4; negotiations; in favour of employer.
Textile dyeing factory workers, Valleyfield, P.Q.	1	111	385	Commenced December 19; dispute over bonus of monthly coupons for rayon; terminated December 22; negotiations; compromise, coupons discontinued, increase in wages granted.
Non-Metallic Minerals, Chemicals, etc.—				
Clay products factory workers, Medicine Hat, Alta.	1	71	213	Commenced December 5; for Rand formula for union dues in new agreement under negotiations; terminated December 7; conciliation, provincial and negotiations; compromise.
CONSTRUCTION—				
Buildings and Structures—				
Carpenters, Cornwall, Ont.	2	29	75	Commenced December 18; for re-employment of three carpenters following strike on Nov. 23-50, see above; terminated December 20; negotiations; in favour of workers.
TRANSPORTATION—				
Electric Railways and Local Bus Lines—		[3]		
Bus drivers, Windsor, Ont.	1	75	25	Commenced December 19; for a new agreement providing for increased wages, 40-hour week with same take-home pay as for 48 hours, and other changes, following reference to conciliation board; terminated December 19; negotiations; compromise.

[1] Preliminary data based where possible on reports from parties concerned, in some cases incomplete; subject to revision for the annual review.

[2] In this table the date of commencement is that on which time loss first occurred and the date of termination is the last day on which time was lost to an appreciable extent.

[3] 375 indirectly affected.

CURRENT LABOUR CONDITIONS

This article summarizes the latest employment and labour information available at March 10, as the LABOUR GAZETTE *went to press. It was prepared by the Economics and Research Branch, Department of Labour.*

AS WAS the case during most of the fall and winter, the number of registrations for work on file with National Employment Service throughout February continued well below last year's figures. By the beginning of March, there were 296,700 applications for jobs on file at local employment service offices, an increase of only 4,000 from the previous month and almost 80,000 below the corresponding figure last year. During most of February, the total registrations hovered around the 300,000 mark, with a slight decrease in the last week. In Ontario and British Columbia there was a drop in job applications over the month.

While the employment situation in the last few months has differed in many important respects from that of last winter, it has still much in common with it. As was the case last year, the majority of those registering for jobs at National Employment Service are persons displaced from seasonal industries. Although the layoffs due to material shortages have increased over last year, the number of persons actually affected does not bulk large in the total unemployment. This situation may of course change in the future, as the system of priorities for basic materials begins to operate, and as present inventories are exhausted.

The predominance of workers from the seasonal industries in the total registering for jobs indicates that recent changes in the economy in response to the preparedness program have not yet produced a general demand for unskilled and semi-skilled workers. While the heavy labour demand in the logging industry in both eastern and western Canada has provided many more winter jobs for those released from agriculture, transportation and construction than last year, even the current high level of operations in the logging camps cannot provide sufficient work to reduce winter unemployment to that of 1948-49.

It is the skilled workers who have felt most directly the impact of the preparedness program. Of this relatively small section of the labour force, only in the machine shop trades has the demand threatened to exceed the supply. For the past few months, the heaviest demand has been for draftsmen, machinists, tool and die makers and related occupations.

The pressures on the supply of this particular group of skilled workers stems partly from the needs of the defence plants, and partly from the increase in production and employment in certain heavy goods industries. The aircraft industry, for example, is now in the process of tooling-up in preparation for full scale production. It requires a substantial number of key

78060—1½

skilled men, especially in the machine shop trades, on whom the employment of large numbers of semi-skilled and unskilled men depends. Since aircraft engines will be produced in Canada on a large scale for the first time, it is likely that the proportion of skilled workers will be larger in this industry than during the war. At the same time, the increase in demand for consumer durable goods, and in capital investment in manufacturing, means an increase in employment for this type of worker in such industries as automobiles and parts, electrical apparatus, machinery building and railroad equipment.

This increase in employment in the durable goods industries is one of the more important points of contrast with the employment situation last winter. At that time, the slowing down of the rate of capital investment in manufacturing, together with the falling off in export demand for certain heavy goods industries, had resulted in considerable unemployment among the skilled and semi-skilled workers in the metal trades.

Since the current heavy demand for skilled machine shop workers results from the preliminary tooling-up process in certain defence plants, at a time when employment has increased in durable goods industries, the current strong demand for this particular type of skilled labour may turn out to be of relatively short duration. The pressures on supplies of skilled machine shop tradesmen from non-defence industries may be gradually relieved if the restrictions on credit and the system of priorities for vital materials begin to affect their production. As well as causing layoffs due to material shortages, the allocation of basic materials for defence, essential construction and resource development may put a definite limit on expansion plans in less essential enterprises.

The National Advisory Council on Manpower has suggested that the National Employment Service could be of great service to the defence industries in filling skilled positions, by encouraging skilled men who apply for work to take jobs in these plants. As the skilled jobs are gradually filled in defence plants, their labour demand may be expected to change, with the emphasis shifting gradually from skilled to semi-skilled and unskilled workers who will make up the bulk of the staff when these industries are operating at capacity.

Even the type of skilled worker most in demand by defence industries will change as work on the projected defence plans gets under way. Once the shipbuilding program begins on a large scale in the spring, demand for construction tradesmen will be heavy, since the shipyards employ a considerable number of electricians, plumbers and steamfitters and carpenters, as well as tradesmen associated with structural steel building and assembly of heavy steel plates. Since the construction industry is anticipating a heavy program this spring and summer, it is possible that this type of labour will be in short supply in some areas. The problem will be eased considerably to the extent that the system of priorities for basic materials is able to cut down the less essential building.

The developing preparedness program will call for a continuous readjustment within the labour force. Surpluses of unskilled and semi-skilled workers, and shortages of a particular type of skilled men, which characterize the current situation, are largely the symptoms of a preliminary stage of readjustment.

IN BRIEF . . .

The cost-of-living index rose from 172·5 to 175·2 between January 2, and February 1, 1951. The increase was largely due to higher prices for foods, clothing and home furnishings. The food index advanced from 220·2 to 224·4, as higher prices for most foods, particularly meats and

(a) Estimated on basis of sample labour force survey. Only those who did not do any work in the survey week are here classified as persons without jobs.
(b) Includes ordinary live claimants plus claimants for supplementary benefit.
(c) Includes $462,000 in supplementary benefit.
(d) This percentage compares the cumulative total to date from first of current year with total from same period previous year.

Data in this table are preliminary figures from regular reports compiled by various government agencies, including Dominion Bureau of Statistics, the Unemployment Insurance Commission, the Immigration Branch, Department of Citizenship and Immigration, and the Economics and Research Branch, Department of Labour. Detailed information can be found in the statistical appendix of the Labour Gazette.

Notes of Current Interest

Foreign trade in 1950

Canada's foreign trade in 1950 established new records. Imports were at an all-time high, and exports established a peacetime record, producing together an all-time peak for total foreign trade.

The rise in value of imports exceeded substantially the advance in that of exports, eliminating the sizable export balance of 1949 and bringing the year's trade nearly into balance with a small import deficit.

One of the outstanding developments of the year was a pronounced shift in the direction of exports. Shipments to the United States increased sharply in value, stimulated by the high economic activity in that country. There was also a substantial gain in sales to Latin America. On the other hand such factors as trade controls, changed purchasing policies, and increased domestic production in overseas countries acted to reduce overseas purchases of Canadian goods.

Total merchandise imports in the year were valued at $3,174,300,000, an increase of $413,100,000 or 15 per cent over the previous high value of $2,761,200,000 for 1949. A considerable part of this rise was due to higher volume as well as prices.

Domestic exports in 1950 increased four per cent in aggregate value over 1949, advancing to $3,118,400,000 as compared to $2,993,000,000, while foreign exports rose to $38,700,000 as against $29,500,000.

Total trade for the year—the sum of imports and exports—rose to the record value of $6,331,300,000, up $547,600,000 from the 1949 aggregate of $5,783,700,000.

On overall commodity account, there was an excess of $17,200,000 in the value of imports over exports in contrast with an export surplus of $261,200,000 the previous year and $473,100,000 in 1948. Import surpluses occurred in seven of the 12 months, the largest of $31,500,000 for November being largely offset by an export surplus of $27,200,000 for December.

The 1950 trade deficit was the first since 1931, at the start of the world economic depression, but is the result of factors that contrast sharply with those at that time. Whereas the adverse balance in 1931 was associated with curtailed markets and depressed prices for Canada's principal exports, the small deficit last year is partly attributable to the activity of the Canadian economy, and a consequent heightened demand for large quantities of foreign goods both for productive purposes and for consumption. Furthermore, the import balance in 1950 is quite light in relation to the high values of Canada's international trade.

Main feature of the year's trade with the United States was the expansion in domestic exports, which rose 34 per cent in value to $2,021,000,000 from $1,503,500,000. Foreign exports to the United States also increased to $29,500,000 from $20,600,000. Imports from the United States moved up at a lesser rate of nine per cent to a value of $2,130,500,000 as compared to $1,951,900,000. As a result, the traditional import surplus declined sharply to $80,000,000 from $427,800,000 for 1949. In December, for the third time in the year, Canada had an export surplus, amounting to $12,000,000, in trade across the border.

In trade with the United Kingdom, imports were higher in value in 1950 and exports were lower. Total purchases from the United Kingdom were valued at $404,200,000 as against $307,400,000 in 1949, increases being recorded in every month except March. Domestic exports to the United Kingdom, on the other hand, declined sharply in value to $469,900,000 from $705,000,000 and the small amount of foreign exports was down slightly at $2,600,000. Canada's export balance with the United Kingdom thus fell to only $68,300,000 from $401,800,000 the previous year. Further reflecting the changes occurring in the direction of trade, Canadian purchases from other Commonwealth countries exceeded exports to those countries in 1950, reversing the experience of many years. This change was due to a combination of smaller exports and larger imports. Imports from Latin America again exceeded exports to those countries as in 1949, while the export surplus to European countries was somewhat smaller and imports from the remaining foreign countries increased sharply to nearly the value of exports.

Besides increasing from the United States and the United Kingdom, Canada's merchandise imports were higher in value last year than in 1949 from all main geographic areas. The increased volume of imports from overseas countries was particularly large. Gains in value were recorded also for all nine main commodity groups of imports.

Matters of labour interest in Speech from Throne

The Speech from the Throne, which opened the Fourth Session of the Twenty-First Parliament on January 30, 1951, contained several items of interest to labour.

In view of the emergency situation brought about by international conditions, the Speech gave notice that measures would be introduced to prevent economic dislocation resulting from defence preparations.

The Speech noted that proposals had been laid before the provincial governments by new tax agreements and for a contributory old age pensions program, and that these were now being studied by the provinces along with proposals for constitutional amendments "which may require to be submitted (to Parliament) before the close of the present Session."

The Speech forecast other measures relating to the St. Lawrence Seaway, Canadian participation in the Colombo Plan and in technical assistance to underdeveloped areas, and problems of veterans.

Employment prospects for university graduates

With the increasing demand for technical personnel, due largely to expanding defence production, it is expected that little difficulty will be experienced in finding employment for the 1951 university graduating class, it was indicated recently by Hon. Milton F. Gregg, Minister of Labour.

As in previous years, the National Employment Service has been carrying on a detailed campaign to arrange for the permanent placement of graduates and to find summer employment for undergraduates.

The program began with a questionnaire last December to employers who were considered to be interested in hiring graduates, or undergraduates.

The Executive and Professional Division of the National Employment Service now maintains full time Employment Offices throughout the whole academic year at the following universities: Alberta, Saskatchewan, Manitoba, Toronto (for undergraduates only), Montreal, Laval, and Sir George Williams College. At other universities, NES officers work in co-operation with university staffs.

The registration of all students who are seeking employment has been completed, and this information can be made available to employers permitting a tentative selection before interviewing. Where employers have representatives visiting universities, NES officers can arrange interviews with selected students.

Last year at this time it was expected that considerable difficulty would be found in placing the abnormally large graduating class of 17,000. However, the vast majority of this large class had been absorbed in Canadian industry by August, 1950. This year's class has been estimated at about 13,000, some of whom could be expected to continue post-graduate studies. With increasing defence production, it was anticipated there would be a strong demand for these well trained young men and women many of whom had some degree of practical experience in their chosen professions which they had obtained during summer work as undergraduates, explained the Minister.

Of the total number of university students expected to graduate this spring about 2,450 are in Engineering, nearly 4,000 in Arts and Science courses leading to the degrees of B.A. or B.Sc., 860 in Commerce or Business Administration, 500 in Agriculture, 1,140 in Education, 900 in Medicine, and 500 in Law. The remainder are in various courses such as: institutional management, dentistry, nursing, optometry, pharmacy, music, journalism, interior design, physical and health education, occupational and physical therapy, social work, theology, philosophy, architecture, household science, child study, and other specialist courses.

Estimates, based on present registrations, of the total number of university students expected to graduate in the next four years are as follows. 1951, 13,000; 1952, 11,500; 1953, 12,300; 1954, 10,000.

Immigration to Canada in 1950

During the calendar year of 1950, 73,912 persons from other countries came to settle in Canada, the Department of Citizenship and Immigration has announced. This compares with 95,217 in 1949, a decrease of 22·4 per cent.

Among the new immigrants were 13,427 from the British Isles, a decrease of 39·5 per cent from 1949. A slight rise was recorded in the number of immigrants from United States who numbered 7,799 as compared with 7,744 in 1949.

Other major categories were as follows (1949 figures in parentheses): Italian 9,058 (7,742); Dutch 7,404 (7,782); Polish 6,612 (12,233); German 5,825 (5,988); Ukrainian 3,769 (6,570); Hebrew 2,429 (4,499); Esthonian 1,949 (2,945); Lettish 1,766 (2,847); Chinese 1,741 (797); Magyar 1,577

(1,633); Czechoslovakian 1,441 (2,076); French 1,188 (1,021); Jugoslavian 1,013 (1,460); Lithuanian 960 (2,248).

Ontario received 39,041 of the immigrants, about 4,000 more than all the other provinces combined. The next highest was Quebec with 13,575. The Prairies received 12,975, British Columbia 6,091, the Maritimes 2,198 and the Yukon and Northwest Territories 32.

Occupational categories of the immigrants were as follows: farming class 28,027; unskilled and semi-skilled workers 8,745; skilled workers 10,727; trading class 5,908; mining class 737; female domestic workers 2,622; and other classes 19,146.

Income of farmers reduced in 1950

Cash income of Canadian farmers from the sale of farm products in 1950 amounted to $2,169,251,000, according to an advance preliminary estimate by the Dominion Bureau of Statistics. This figure was down 12 per cent from both the preceding year's total of $2,456,871,000 and $2,459,393,000 in 1948, but substantially above the 1947 total of $1,967,263,000.

The reduction in 1950 was largely attributable to the substantial decline in returns realized from the sale of grains. In this connection, Canadian Wheat Board payments in 1950 were far below those of 1949. In addition, the initial price of wheat to producers in the Prairie Provinces was lowered at August 1, 1950 from $1.75 to $1.40 per bushel basis No. 1 Northern in store Fort William-Port Arthur. Severe August frosts in the Prairie Provinces caused considerable damage to grain crops and sharply reduced average grades.

In addition to the above totals, supplementary payments made under the provisions of the Prairie Farm Assistance Act in 1950 totalled $21,182,000 as compared with $17,628,000 in 1949, $20,748,000 in 1948, and $11,577,000 in 1947.

Most of the decline in cash returns took place in the Prairie Provinces. Totals for Ontario and British Columbia were slightly lower but there were advances in the Maritime Provinces and Quebec.

Changes in workmen's compensation laws in 1950

The 1950 edition of *Workmen's Compensation in Canada, A Comparison of Provincial Laws,* which was recently issued by the Department of Labour, is a mimeographed 40-page bulletin setting out in some detail the similarities and differences in the ten provincial workmen's compensation Acts. Benefits paid to injured workmen or to their dependants in death cases are set out in the form of tables. A table of occupational diseases indicates the provinces in which each disease is compensated.

The bulletin analyses the Acts under the headings Workmen's Compensation Boards, Scope of Laws, Risks Covered, Waiting Period, Medical Aid, Rehabilitation, Accidents Occurring Outside the Province, Accident Prevention and others. For purposes of comparison between the provincial legislation and international standards, the Conventions and Recommendations of the International Labour Conference concerning workmen's compensation are summarized.

Changes made in 1950 are noted, the most important being the enactment of a new Act in Newfoundland providing for a system of collective liability. This Act has not yet been proclaimed in effect.

Manitoba followed Ontario's example by extending the scope of its Act to cover not only certain specified diseases but also any disease peculiar to any industrial process, trade or occupation within the scope of the Act.

In Saskatchewan, a change was made with respect to the waiting period. Heretofore, a workman had to be disabled for more than three days in order to be paid compensation from the date of disability. Under the Act, as amended, if the workman is disabled for any longer time than the day of the accident, he receives compensation from and including the day after the accident.

Monthly benefits to children under 16 were raised from $12 to $15 in Saskatchewan and the amount payable for burial expenses was increased from $125 to $175.

Three provinces—Nova Scotia, Prince Edward Island and Saskatchewan—increased the minimum payment which may be made in cases of total disability.

The power of the Prince Edward Island Board to take accident prevention measures was increased.

Copies of the bulletin are available from the Legislation Branch, Department of Labour.

Trade council accepts Vancouver Local 407

The Vancouver and District Trades and Labour Council has voted to accept the application of Civic Employees' Local 407 for membership. Local 407 was set up after the Trades and Labour Congress had suspended Vancouver Civic Employees' Union Local 28 (L.G., Jan., 1951, p. 11), because of suspected Communist domination.

ICFTU forms Western Hemisphere regional organization

Delegates representing many of the non-Communist labour organizations in the Western Hemisphere met in Mexico City, January 8-12, to form an American regional group of the International Confederation of Free Trade Unions. The new body will be known as the Inter-American Regional Workers' Organization (IROW) of the ICFTU, and will have its headquarters in Havana, Cuba.

The organization, representing between 17 and 20 million workers from 20 American nations, elected Arturo Sabrosa, President of the Peru Confederation of Labour as its president. Franciso Aguirre of Cuba was elected full-time secretary.

Canadian labour was represented at the conference by Pat Conroy, Secretary-Treasurer of the Canadian Congress of Labour, George Burt, Canadian Director of the United Automobile Workers, Fred Dowling, Canadian Director of the United Packinghouse Workers, Percy R. Bengough, President of the Trades and Labour Congress, and A. E. Hemming, Executive Secretary of the TLC.

Mr. Conroy was elected to the post of Co-Secretary of the Conference (L.G., Feb., 1951, p. 151), with Franciso Aguirre of Cuba. Mr. Bengough was elected an alternate member of the 9-man executive committee. Both Mr. Conroy and Mr. Bengough were named to the 31-man regional council. Mr. Claude Jodoin, TLC, vice-president, and George Burt were named as substitutes for Mr. Bengough and Mr. Conroy.

The purpose of the new organization was explained by ICFTU General Secretary J. H. Oldenbroek. He said:—

> Aims of the new organization are threefold. We will do all we can to assist in building strong unions in Latin America and in raising economic standards. We will fight against all totalitarian influences, whether Stalinist, Peronist, or Falangist. We will seek to strengthen democratic forces throughout the hemisphere.

One of the major problems during the five-day conference was the question of whether the Argentine unions should be admitted to the IROW. The move to admit the Argentine group was headed by the Mexican textile workers, and was supported by conference chairman Fidel Velasquez, head of the Mexican Confederation of Workers.

Debate on the question lasted for five hours. The AFL, CIO, and United Mine Workers, strongly supported by delegates from other North and Latin American groups firmly opposed any Argentine representation arguing that Argentine labour is not represented in the ICFTU, and that it is controlled by the Argentine government.

When the final vote was taken, the only group voting in favour of Argentine affiliation was the Mexican delegation. Mr. Velasquez then resigned as conference chairman.

In a discussion of the draft rules for the organization, the Mexican Workers' Federation disagreed with the rules presented by the Executive Board on the ground that they did not give full autonomy to affiliated bodies. The Executive maintained that the rules had been laid down by the constituent Congress of the ICFTU and could only be changed by that body. The Conference supported this stand. The Mexican delegation withdrew in protest but promised enduring "friendship and hospitality" to the IROW. The Conference unanimously asked the Mexican federation to return to the organization.

The affairs of the IROW will be handled by the president, secretary and the executive board. This board is made up of three members from North America, one from the Caribbean, one from eastern South America, one from western South America, and one from Central America.

The rules for the Secretariat, the General Secretary's report, various reports and resolutions, the financial arrangements and other items on the agenda were also unanimously approved by the delegates.

A Regional Conference which is to meet at least once every three years was also created.

Long-term plan for British coal

The National Coal Board issued in November its *Plan for Coal*. The new program, which is to extend over the next 15 years, provides for the reconstruction of 250 collieries and an investment of £635 million.

The plan envisages a 37·5 per cent increase in productivity over the 15-year period. This is expected to result in a saving of seven shillings a ton at current prices, part of which will go to increasing wages as productivity rises.

Total output is to increase by about 20 per cent, but the number of miners will fall by 11 per cent, or some 80,000 men.

Assurances have been given the miners, it is stated, that this planned reduction "will result in stable jobs, rather than the opposite, since the existence of a plan will allow men who are to become redundant in coal-getting to work on reconstruction,

78060—2

while the ordinary wastage will take away the men who can be spared from the industry."

Recruitment is still urgently needed to keep the number of men to the planned level.

"Escalator" clauses in U.S. wage agreements

An article in *Labour Information Bulletin,* published by the United States Labour Department, cites the increasing prevalence of automatic cost-of-living wage-adjustment plans in contracts negotiated since June 1950 as "one of the most significant collective-bargaining developments arising out of the Korean crisis and the emergency defence program".

Prior to the summer of 1950, the article continues, about a half million workers were known to have been covered by such provisions. The July-December 1950 additions are estimated to have raised the total number of workers covered to upwards of 1,500,000.

"Automatic cost-of-living or escalator clauses, which require that specified wage adjustments be made according to changes in the cost of living are not, however, new or unusual," the article states. The practice of gearing wage changes to price changes was prevalent to some degree during and immediately after World War I and again prior to World War II when prices began to rise rapidly.

"Interest in cost-of-living plans rose with the introduction of an escalator clause in the 2-year agreement signed in May 1948 between the General Motors Corporation and the United Automobile Workers. The agreement included a new feature by also providing for regular annual increases of 3 cents per hour to raise the real earnings of General Motors workers. This tended to lessen union opposition to tying wage changes to fluctuations in the cost of living. Formerly it had been the feeling of most unions that the adjustment of wages to the cost of living merely served to freeze the level of real wages, thus depriving wage-earners of benefits resulting from technological development or an expanded economy.

"Renegotiation of the GM-UAW contract for a precedent-making 5-year term in May 1950, with the escalator clause retained and the 'annual-improvement' wage increase raised from 3 cents to 4 cents per hour, focused widespread attention upon the characteristics of such wage-adjustment procedures."

The article states that escalator clauses are sometimes based on indexes available for certain cities, but that most commonly they are based on the national index. The reason for this is that many agreements cover establishments in cities for which no index is available, or, like the General Motors agreement, cover plants scattered throughout the United States. Usually the index for the month in which the agreement becomes effective, or some other specified month, is taken as the base point in computing the amount of subsequent wage adjustment.

Dealing with the ratio of wage changes to cost-of-living changes, the article states that many recent agreements follow the General Motors formula providing for wage changes in a precise ratio to relatively slight changes in the cost-of-living index. "This formula provides for regular quarterly adjustments in wages at the rate of 1 cent for every 1·14 point change in the index. In some clauses, the change in the index must be relatively large before wages are adjusted, such as 1-per cent change in wages for each 5-point change in the index.

"Many escalator provisions establish a 'floor', a 'ceiling', or both on the amount of the automatic wage adjustment. An agreement may specify that no wage adjustment is to be made because of fluctuations of the index below or above a specified figure. More commonly, as in the General Motors agreement, the lower limit on wage decreases is defined by prohibiting further wage reduction if the index falls below a designated point.

"Since the primary purpose of escalator clauses is to compensate workers for current changes in the prices of goods and services they must buy, cost-of-living adjustments are made relatively frequently. Most generally, they are made once each 3 months, as in the General Motors agreement. Among other agreements adjustments are provided every month or every other month. Still others provide for only one adjustment each year."

Pension and insurance plans in U.S. agreements

At least 7,650,000 workers were covered by collectively-bargained pension or social insurance benefits by mid-1950, the U.S. Labour Department reported at the end of December, 1950. The extent of benefit coverage—more than double that found in 1948—reflects the widespread movement of the last two years on the part of employers and unions to establish new programs, or bring existing pension or insurance benefits within the scope of labour-management agreements, the Department stated.

In most cases, the cost of the pension or "health and welfare" plan is financed solely

by the employer, the survey disclosed. This was particularly true for pensions. Of the 4·8 million workers for whom data were available on the method of financing, 80 per cent were covered by non-contributory programs. Social insurance benefits, financed solely by the employer, covered about 60 per cent of the workers included under collectively-bargained plans. The remainder were financed jointly by workers and their employers.

Among the individual insurance benefits most frequently provided in contracts, life insurance ranks first, in terms of the number of workers covered. It is followed in order by: hospitalization; surgical and/or medical; accident and sickness; and accidental death and dismemberment.

Among the industries in which large numbers of workers are covered by some type of employee benefit program under labour-management contracts, metal products (including steel, auto, and machinery) accounted for nearly 2·5 million. Almost 1·5 million workers each are covered by plans in (1) the textile, apparel and leather, and (2) transportation, communication, and other public utility (except railroads) group of industries.

Employer-financed insurance and/or health plans were characteristic of the textile, apparel and leather; lumber and furniture; printing and publishing; mining and quarrying; and trade, finance, insurance, and service industry groups. Employer-financed pension plans predominated in the textile, apparel and leather; printing and publishing; stone, clay, and glass; and mining and quarrying industries.

Of the total coverage of 7,650,000 workers, slightly more than one-third (35 per cent) were under plans of unions affiliated with the American Federation of Labour. About 47 per cent were included under benefit programs of CIO affiliated unions and the remainder by unaffiliated or independent unions.

Holiday provisions in union agreements, U.S.A., 1950

Wage payment to workers for specific holidays not worked has become common practice under collective bargaining. A recent survey made by the U.S. Bureau of Labour Statistics showed that of 2,316 current agreements analysed, nearly three-quarters—73·4 per cent—included paid holiday clauses. An earlier study, in 1949, revealed that two-thirds of 464 agreements examined granted paid holidays.

Salaried workers have long enjoyed the benefits of paid holidays, but for production workers the practice has become prevalent only since World War II. In 1936, the National Industrial Conference Board, in a survey of 446 companies, found that only 9 per cent granted paid holidays to their production workers, and in a similar study in 1946, of 240 companies surveyed, 40 per cent granted paid holidays.

In the 1950 survey, the Bureau found that the number of holidays with pay varied from one to as high as ten in a few cases. More than half of the 1,701 agreements, however, specified six such holidays a year. The most frequently designated were: New Year's Day, Memorial Day, July 4, Labour Day, Thanksgiving Day, and Christmas.

In 363 agreements, provision was made for both paid and unpaid holidays.

Premium pay for work performed on the specified holidays was provided in 92 per cent of the agreements stipulating paid holidays, and in 90 per cent of the agreements containing unpaid holiday clauses. In general, most agreements tended to pay somewhat lower rates for work performed on unpaid holidays. Double-time rate was most frequent for paid holidays, and time-and-a-half for unpaid holidays.

1950 best homebuilding year in U.S. history

The year 1950 was the best homebuilding year in the history of the United States according to preliminary estimates of the U.S. Labour Department's Bureau of Labour Statistics. In December, 95,000 new permanent non-farm dwelling units were started, bringing the year's total to a record-breaking 1,400,000 units. This total, the Bureau disclosed, exceeded the 1949 record volume (1,025,100 units) by 36 per cent, and was almost 50 per cent above the previous peak of 937,000 units in 1925.

Problems of ageing population subject of research

The problems of an ageing population are dealt with in a research symposium, entitled *The Aged and Society*, published by the Industrial Relations Research Association (L.G., March, 1950, p. 303).

The studies are arranged under three main headings: Part I, The New Age Distribution in the New Society; Part II, Older Workers and Social Patterns; and Part III, Research—Present and Prospective.

Under Part II the problems of the older worker are studied in relation to the labour market, the role of industry, union policies, self-provision, retirement age, and social provisions.

78060—2½

Part III, "Research—Present and Prospective," includes studies on personal and social adjustment, the contribution of psychology, employability, mental health, and medical-social aspects of the ageing process.

Labour statistics in U.S.A.

The *Statistical Abstract of the United States, 1950,* published by the Bureau of the Census, contains a 40-page chapter on the labour force. Among the facts brought out in the variety of tables are that the labour force included 43·8 million males and 18·3 million females at the end of 1949, of whom 2½ million males and 1 million females were unemployed.

Indexes of output per man-hour show that since 1939 productivity has risen 11 per cent in mining, 30 per cent in agriculture, 33⅓ per cent in steam railroad transportation (based on the increase in revenue traffic per man-hour) and 71 per cent in electric light and power. No estimates are available for manufacturing industries.

Labour union membership rose steadily from just under 9 million in 1940 to almost 15½ million in 1947. For 1949 it is estimated at between 14 and 16 million.

The age of workers and the geographical, industrial and occupational distribution are shown in detail, as are their average hours and earnings.

The *Abstract* also includes chapters on such subjects of labour interest as Social Security and Related Programs, Income and Expenditures, Prices, and Business Enterprise.

The *Abstract* has been published annually for 71 years. It is for sale by the U.S. Government Printing Office, Washington, at a price of $3.

Holidays with pay in Luxembourg

An Act passed recently by the Luxembourg Parliament established new conditions for paid holidays, designed to expand the existing system.

Under the Act, "the annual holiday will be: for the first three years' service, not less than eight working days after six months of uninterrupted work for the same employer; for the fourth and fifth year of uninterrupted work for the same employer, not less than 12 working days; and the subsequent years, not less than 18 working days."

For apprentices and workers under 18 years, holidays are established at not less than 12 working days after six months uninterrupted service; and not less than 18 days after one year. In both cases, service must be with the same employer.

In scope, the law applies to the Government, railway companies, the communes, public and private utilities, industrial and commercial undertakings normally employing more than 20 workers, and mines, slate quarries and similar undertakings, regardless of the number of workers employed.

The Act also covers industrial and commercial enterprises normally employing 20 workers or less, and workers and apprentices under 18 years of age. Workers in agriculture, horticulture, domestic servants and home workers will have their right to holiday determined by administrative regulation.

French Government orders break-up of WFTU

According to a report in the *New York Times,* the Government of France on January 26, ordered the "dissolution" of the World Federation of Trade Unions, whose headquarters have been in Paris.

The order specified that the directors of the Federation, who include Secretary General Louis Saillant, were to liquidate its holdings within a month.

Two other pro-Communist organizations were ordered dissolved at the same time. They are the World Federation of Democratic Youth and the International Democratic Federation of Women.

The WFTU had been abandoned two years ago by most labour organizations from the democratic countries on the grounds that it was Communist dominated (L.G., March, 1949, p. 251). Subsequently these and other organizations united to form the International Confederation of Free Trade Unions (L.G., Feb., 1950, p. 172).

Formation of National Advisory Council on Manpower

During February, a 30-member National Advisory Council on Manpower was formed, which will study manpower problems in Canada and advise the Government on the most effective utilization of the present and potential Canadian working force. The Council held its first meeting on February 20 and 21 and formulated its first recommendations.

On February 5, 1951, the Hon. Milton Gregg, Minister of Labour, announced in the House of Commons that a National Advisory Council on Manpower would be established, charged with the following duties:—

> to consider various aspects of manpower questions;
>
> to advise on plans under review; and
>
> to suggest plans which should be developed so as to make for the most effective utilization in the national interest of the present and potential man and woman working force of Canada.

A few days later the names of the members of the Council were announced. They include representatives of labour, employers, agriculture, veterans and the women of Canada, and also representatives of various divisions of the public service. The joint chairmen are Mr. Norman Robertson, Clerk of the Privy Council, and Mr. Arthur MacNamara, Deputy Minister of Labour.

First Meeting of Council and First Recommendations

On February 20 and 21, the Council held its first meeting. Although this was intended largely as an exploratory meeting, it was revealed at its conclusion that the Council had nevertheless made a series of recommendations.

It approved of Department of Labour plans to bring up to date the records of technical and scientific personnel which were first assembled in World War II. Added to this proposal was the recommendation that records of all apprentices in Canada be obtained and studied with a view to increasing apprenticeship enrolment.

The Council thought well of a plan which would provide for priority in the placement of persons who applied for employment at National Employment offices, by counselling them to go into industries of high priority on a purely voluntary basis. The Department of Labour undertook to proceed with the plan and to undertake the preparation of a priority rating in co-operation with Departments of Trade and Commerce, National Defence and others concerned.

It recommended that the Departments concerned should make an immediate and comprehensive study of all aspects of the national registration question.

The Council further approved the exploration measures being undertaken as a result of the recent Federal-Provincial Rehabilitation Conference in Toronto to provide further skilled workers from among the physically handicapped group. It also endorsed a study of other training programs designed to provide skilled workers for industry and the Armed Forces.

Discussing the problem of the 300 thousand job seekers presently registered with the Employment Service from a point of view of increasing mobility of some of the workers so that they might be available for jobs outside their own communities, it was suggested that the Government might explore the possibility of providing transportation assistance to some of these workers. The Dominion Government, with the assistance of employers and the provinces, might work out a plan. It was further suggested that an examination be made of the possibility of placing industry near the source of available labour. Although in many instances the nature of the industry was such that it could not be so moved, in some cases it should be practical.

Members of Manpower Council

The names of the members appointed to the National Advisory Council on Manpower are as follows:—

Representative of Labour

Percy Bengough, President, Trades and Labour Congress, Ottawa.

P. Conroy, Secretary-Treasurer, Canadian Congress of Labour, Ottawa.

Gérard Picard, President, Canadian and Catholic Confederation of Labour, Montreal.

James B. Ward, Assistant Grand Chief Engineer and Dominion Legislative Representative of the Brotherhood of Locomotive Engineers; Secretary, Dominion Joint Legislative Committee of the Railway Transportation Brotherhoods, Ottawa.

Representative of Employers

Rhys M. Sale, President, Ford Motor Company of Canada, Windsor.

Albert Deschamps, Engineer, Past President, Canadian Construction Association, Montreal.

Philip Gruchy, Manager, Anglo-Newfoundland Development Company Limited, Grand Falls, Newfoundland.

William Mainwaring, Vice-President, B.C. Electric, Vancouver, B.C.

Representative of Agriculture

Geo. Robertson, Secretary, Saskatchewan Wheat Pool, Regina, Sask.

J. A. Marion, Vice-President, Canadian Federation of Agriculture, President, l'Union des Cultivateurs.

Representative of Women of Canada

Mrs. R. J. Marshall, President, National Council of Women, Agincourt, Ont.

Madame R. de la Durantaye, Ottawa.

Representative of Veterans of Canada

Lt. Col. E. A. Baker, Chairman, National Council of Veterans Associations in Canada, Toronto.

Very Rev. Dean J. O. Anderson, Third Vice-President, Dominion Command, Canadian Legion of the B.E.S.L., Winnipeg, Man.

Representatives of Divisions of Government Services

Dr. J. G. Taggart, Deputy Minister, Agriculture.

Laval Fortier, Deputy Minister, Citizenship and Immigration.

K. W. Taylor, Assistant Deputy Minister, Finance.

Stewart Bates, Deputy Minister, Fisheries.

L. H. Nicholson, Assistant Commissioner, R.C.M.P., Justice.

J. G. Bisson, Chief Commissioner, Unemployment Insurance Commission, Labour.

A. H. Brown, Chief Executive Officer and Solicitor, Labour.

Marc Boyer, Deputy Minister, Mines and Technical Surveys.

C. M. Drury, Deputy Minister, National Defence.

Hugh A. Young, Deputy Minister, Resources and Development.

M. W. Sharp, Assistant Deputy Minister, Trade and Commerce.

E. L. M. Burns, Deputy Minister, Veterans Affairs.

Charles Stein, Under Secretary of State.

C. H. Bland, Chairman, Civil Service Commission.

Ex-officio members of the Council are Dr. W. A. Mackintosh, Chairman of the Unemployment Insurance Advisory Committee, and Judge W. J. Lindal, Chairman of the National Employment Advisory Committee.

Raymond Ranger of the Department of Labour is Secretary of the Council, and George G. Blackburn of the Department of Labour is Assistant Secretary.

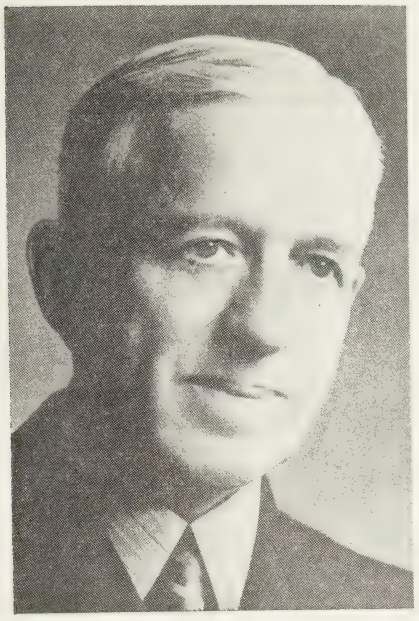
Statement of Minister of Labour

In announcing the formation of the Council, the Minister of Labour called attention to the fact that since the emergency of 1939, Canada had developed widespread activities under the Unemployment Insurance Act.

At the present time, nearly every large community in Canada was served by one of the offices of the Unemployment Insurance Commission, which carries on the dual function of unemployment insurance and a national employment service.

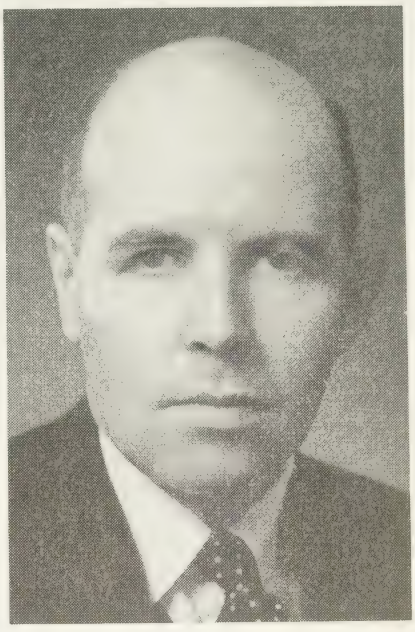
These offices, the Minister pointed out, keep constant and intimate contact with local working forces and employers in industry.

They also supply a constant flow of vital information and statistics.



National, regional and local employment committees, comprising representatives of labour, employers and other non-governmental groups, perform valuable services in assisting the National Employment Service.

"While the demand for workers was less than the supply in all categories, the Minister continued," "the objective of this machinery has been the mitigation of the hardships of unemployment on the one hand, and seeking to find work for applicants for jobs on the other.



"Now, however, when the demand for workers for the armed forces, and for defence industries as well as normal industries, promises to exceed the supply in some categories, I believe the unemployment insurance commission-national employment service machinery I have outlined could continue its present role without interruption and at the same time provide the medium for arranging the maximum voluntary utilization of our manpower during the kind of emergency in which we now find ourselves.

"There are many organizations, public bodies and departments of government vitally interested in all these matters, as

JOINT CHAIRMEN OF CANADA'S MANPOWER ADVISORY COUNCIL

ARTHUR MacNAMARA
Deputy Minister of Labour

NORMAN ROBERTSON
Clerk of the Privy Council

These two Government administrators have been named as chairmen of the recently appointed Council which is studying the problem of utilizing Canada's industrial population to its maximum extent in the emergency defence program.

---

well as the Minister of Labour, through whom the department and the Unemployment Insurance Commission are responsible to the government: for example, the Department of National Defence, labour unions, defence industries, management, and so on. In this search for the maximum utilization of manpower now under the voluntary system, I believe the Government should have available a joint clearing house for the prompt study of month to month manpower resources and needs, for the formulation of advice to the Minister of Labour or to the Government with respect to these matters, and for the interpretation of resultant plans to workers, to management and indeed to all citizens.

"The success of any plans, whether made under present voluntary methods or under more difficult conditions in the future, will depend upon how well they have been formulated in the light of all the facts, and upon how intelligently the opportunities to participate in them are presented to the people of Canada."

The Minister then described the structure of the Council and its functions. He added: "In organizing this Council the Government is determined that the greatest care shall be exercised in seeing to it that our available working personnel—particularly in the skilled trades—shall be distributed amongst the armed forces, defence production and civilian activities in the most effective manner possible."

Review of Present Manpower Situation

Among the matters considered at the first meeting of the National Advisory Council on Manpower were two reports on the general manpower situation by Mr. J. G. Bisson, Chief Commissioner, Unemployment Insurance Commission, and G. V. Haythorne, Director, Economics and Research Branch of the Department of Labour.

Highlights of Mr. Haythorne's and Mr. Bisson's reports are as follows:—

There was a commonly held view that the manpower situation in Canada had changed strikingly over the past year, from one in which there was a concern over scarcity of jobs to one in which there was concern over possible manpower shortages.

The available information suggested that the change in the overall situation was not as great as many people seemed to think. A year ago, there were 375,000 persons looking for work through the local National Employment Service offices. Today, the figure is around 300,000, which represents a sizable labour surplus even for this time of year.

However, there had been other more specific changes in the manpower situation which were more indicative of the basic economic and related developments of the past year. For example, as compared with a year ago, there are today approximately 50,000 more persons in the total labour force, 40,000 more workers employed in woods operations, 70,000 more persons employed in manufacturing, and 17,000 more persons in the Armed Forces.

In looking at our current situation, it was important to keep in mind that we were at present in the middle of the usual winter decline of activities in several industries. Six months ago, when employment was at its summer peak, the number of people registered for work at National Employment Service offices totalled 135,000. Under our Canadian conditions it was not unusual for this number to be at least doubled by the middle of the winter. Although the figure today was somewhat more than double what it was in September, employment was nevertheless at a record level for this time of the year.

The reports stated that the current manpower picture varied considerably from area to area and from industry to industry. Manpower shortages were showing up particularly in the case of certain occupations where considerable skill and experience are required. "Clearance orders (orders which cannot be filled locally) indicate that at present there are shortages of engineers, draughtsmen, machinists, tool makers and die setters, and sheet metal workers. To a lesser extent, there are shortages of moulders, welders and flame cutters, and electricians. Another group showing a distinct shortage is that including loggers and bushworkers.

The clearance system of the National Employment Service, by which openings for jobs which cannot be filled locally may be circulated to Employment Offices in other areas and regions of the country, will be of increasing service to employers as shortage of manpower develops. It was pointed out that the figures available on numbers of job openings and applicants for jobs may understate the actual labour requirements. In the case of scientific and technical personnel and some other skilled groups, for example, not all employers have filed their job openings with the National Employment Service. It was true too that job openings and applications by workers, even in the same occupation, often included many shades of skill and experience. Some applicants in addition may over-rate their occupational capacities. Because of these various circumstances, the fact that applications exceed jobs does not mean that there was necessarily a surplus of the particular type of worker needed for a particular type of job.

Some checks that have been made during the last few days with firms having defence contracts in the aircraft, shipbuilding and electronics industries, however, tend to support the view that except in relatively few cases, no substantial shortages of skilled labour exist at present.

It has been estimated that around 1,000,000 persons were engaged in various types of war production in 1944, in addition to the 779,000 personnel in the Armed Services. While figures are not available, the number employed on defence activities today aside from the Armed Forces do not probably exceed one-tenth of the 1944 total. Thus, while defence efforts today are becoming large by ordinary peacetime standards they are not making claims on manpower to anything like the extent of those made during World War II.

During the coming months there would undoubtedly be substantial increases in labour requirements. These increased requirements were likely to arise from three main circumstances:—

First, the usual resumption of full scale operations in industries with seasonal fluctuations would require large numbers of workers. This increase would not likely be any smaller than in recent years, and there was a strong probability that it might be somewhat higher due to more activity in essential construction, in transportation and in summer logging.

Second, the direct and indirect employment effects of the present expanded defence production program in Canada as well as in other countries had not yet been fully felt. To some extent, the manpower needs of this expanded program are being met as a result of internal shifts of production from civilian to defence goods in individual plants and industries. Evidence of this was clear, for example, in the electronics and textile industries. On the other hand, a considerable proportion of the present defence production program represents additional production and to this extent it involves additional labour requirements.

REPORT OF COMMISSIONER ON WORKMEN'S COMPENSATION IN ONTARIO

A summary of the Report of the Hon. Mr. Justice W. D. Roach.

The Report of the Hon. Mr. Justice W. D. Roach who was appointed Commissioner under the Public Inquiries Act to inquire into, report upon and to make recommendations regarding the Ontario Workmen's Compensation Act upon subjects other than detail administration was submitted to the Ontario Government on May 31, 1950, and made public early in December.

The inquiry was the second made on the workings of the Act since it went into operation on January 1, 1915. The first was conducted by the late Mr. Justice Middleton in 1931-32 (L.G., 1932, p. 407).

In the course of his inquiry Mr. Justice Roach received briefs from 48 persons, firms or organizations, and held public hearings in Toronto on 19 days to consider and discuss the various submissions and to receive evidence or further representations. His comprehensive, 125-page Report is exceptionally well arranged and organized and is the more easily followed in that, as well as giving a general outline of the Act, it quotes the relevant sections on which submissions were made. The reasons for and against the making of a recommendation are fully set out.

The Report first reviews the background of the Act, restating its purposes and objectives and the benefits which it bestows on employers, employees and the public. Referring to it as the vanguard of all such legislation in Canada, the Commissioner stated:—

> It swept away the old common law doctrines to which I have referred and rested the right to compensation upon the mere existence of the employer-employee relationship.
>
> * * *
>
> This Act should be considered for what it is and was originally intended to be, namely, a scheme by which compensation is provided in respect of injuries to workers in industry. It is not a system for dispensing charity. It is not unemployment insurance. It is not social legislation for the purpose of elevating the standard of one group in society at the expense of another.

It might be useful to indicate here that the Act does not apply to all industries but only to those enumerated in Schedules 1 and 2. Schedule 1 contains the very large list of industries under the collective liability system. These industries are required to contribute to the Accident Fund and medical aid and compensation to injured workers are paid out of the Fund. The industries or businesses in Schedule 1 are divided into classes. At present there are 25 classes.

In the much smaller list of industries in Schedule 2 each employer is *individually* liable to pay medical aid and compensation to the Board in respect of workers injured in his employ and the Board in turn pays it to the worker. In Schedule 2 are the businesses of railways, street railways, express, telegraph, and Dominion telephone companies; navigation, towing, and marine wrecking; municipalities; commissions and school boards; and the Crown in the right of the Province. The Board determines the amount and all other questions of compensation in Schedule 2 as in Schedule 1. The part of the Act administered by the Board is known as Part I.

Coverage of the Act

Mr. Justice Roach regarded as impractical the suggestion that every workman should be covered by Part I of the Act, no matter in what industry he may be employed and even though he is the sole employee, remarking that such extensive coverage was never intended.

With respect to coverage, the Report makes three recommendations:—

1. That members of municipal volunteer fire brigades should be covered by the Act. Presently 155 of such brigades in the Province are recognized by the Board as being covered, on the application of the municipal corporation concerned.

2. That Part I should be made applicable to persons who are required under Section 167 of the Criminal Code to assist police officers in making arrests or in preserving the peace. Police officers are protected by the Act.

3. That the Board, on the application of four or more workmen in an industry *not* included in Part I, may add that industry either to Schedule 1 or Schedule 2, on such conditions as the Board may determine.

With respect to the third recommendation, the Commissioner noted that a wholly excluded industry may be brought under the Act on the application of the employer, but no comparable right is given to workmen. To permit an application to be made by less than four workmen would be

impractical. Further, the Board has already excluded by regulation certain industries in which less than four are usually employed.

Waiting Period

One of the recommendations of the Report which has met with the general approval of labour is a proposed reduction in the "waiting period", which has always been seven days. Workers who are disabled for less than seven days are entitled to no compensation and receive medical aid only. During 1948, out of a total of 161,733 accidents in industries under the Act, 109,904 or about 68 per cent kept workers off the job for less than seven days. Labour urged the abolition of the waiting period, contending that any loss of earnings is a serious matter and that workers should be compensated for such loss.

Mr. Justice Roach was convinced that there should be some waiting period. In his opinion, and this was one of the arguments put forward by representatives of employers, the waiting period should be regarded as part of the worker's contribution to the scheme of the Act. However, in view of the prevailing shorter workweek in many industries, to leave the waiting period at seven days would mean increasing the amount of the worker's contribution. The Commissioner pointed out that the purpose of the Act is to compensate the injured worker for loss of earnings and that the present waiting period includes some non-working days. In a given case it could include Saturday, Sunday and a Monday holiday.

The Report, therefore, recommends that the waiting period should be reduced from seven to four working days. Working days should include all holidays for which the workman, if uninjured, would be paid without working. If the waiting period were reduced to less than four days, it was pointed out, the cost of administering compensation to those disabled for short periods would be out of all proportion to the benefits received. Secondly, it would unfairly transfer to employers and the public the contribution which the workers should justly bear.

Serious and Wilful Misconduct

A workman is barred from receiving compensation where the injury is attributable solely to his serious and wilful misconduct, *unless* the injury results in death or serious disablement. It was urged that this section be deleted from the Act, but the Commissioner recommended that it be retained. It can work no injustice on the workman, he suggested, since the Board is able to decide fairly in a given case whether an injury was caused solely by a worker's serious and wilful misconduct. To delete

Major Recommendations of Report on Ontario Workmen's Compensation Act

1. That the "waiting period" should be reduced from seven to four days.
2. That maximum annual earnings which may be taken into account in computing compensation should be raised from $3,000 to $4,000.
3. That compensation for burial expenses should be increased.
4. That additional sums necessary to make increases in compensation payable for past fatal accidents should be paid by the Government and not levied on employers.
5. That lung cancer should be an industrial disease and that silicosis and pneumoconiosis should be compensable when contracted in any process in which there is inhalation of silica dust.
6. That accident prevention work should be placed under the jurisdiction of the Workmen's Compensation Board and that the Board should be empowered to make and enforce safety regulations.
7. That an accident prevention committee should be set up in every plant with 20 or more workmen.

it would unjustly impose on industry or the public the burden of paying compensation for anything less than a serious disablement which was brought about solely by the worker's misconduct.

Terming this provision, which has been in the Act since its enactment, social legislation, His Lordship expressed his opinion that a worker whose misconduct caused his injuries did not merit any compensation regardless of the extent of his injuries and that the only reason for allowing compensation in the event of death or serious disablement was that otherwise his dependants might become public charges.

Compensation in Non-fatal Cases

Maximum Earnings

The major recommendation under this heading is that the maximum annual earnings on which compensation is computed should be increased from $3,000 to $4,000. This change, the Commissioner noted, would bring Ontario substantially ahead of other provinces. In Saskatchewan, in computing compensation, any earnings in excess of $3,000, and in other provinces any earnings over $2,500 a year, are disregarded.

The Commissioner felt that this amendment should be made if Ontario was to adhere to the general scheme and purpose of the Act. In drafting the original Bill, Chief Justice Meredith fixed the maximum amount by reference to which compensation should be computed as $2,000, stating that this amount was "probably the maximum amount earned in a year by the highest paid wage-earner". The limitation was increased in 1943 to $2,500 and as of January 1, 1950, to $3,000. On the evidence presented, it appeared that $3,000 does not today represent the yearly earnings of the highest paid workmen, e.g. in the running trades and in mines where workmen may make as much as $4,000 a year.

Percentage Rate

A workman who is totally disabled is entitled to receive 75 per cent of his average earnings (disregarding any excess above $3,000 a year) e.g., where he earns on an average $40 a week, he would receive $30 compensation.

In response to two submissions that (1) the 75 per cent rate of compensation in non-fatal cases is too high, and (2) that it should be increased to 100 per cent, the Commissioner figuratively placed on the scales the employer's debt to the workman and, on the worker's side, the benefits given to him and also his contribution to the Act. "If the scales are then in balance, the debt is paid. If they are not, there is something wrong with the Act." In the employer's pan of the scales his debt to the workman must cover medical expenses made necessary by the injury, loss of present and prospective earnings, and pain and suffering. In the worker's pan of the scales must be placed full medical aid, 75 per cent of the worker's average earnings (with fixed minimum payments), the full cost of rehabilitation and the workman's contribution to the scheme of the Act. This contribution includes the following: he forgoes compensation for the waiting period where the disability is of less than seven days' duration; he bears 25 per cent of lost earnings; and he forgoes compensation for pain and suffering.

After enumerating these factors, Mr. Justice Roach concluded, "I am not satisfied that they are so far out of balance as to require such adjustment." Consequently, he did not favour any change.

The Commissioner did not agree that the percentage should be applied to the net earnings of the worker rather than to his gross earnings.

He discussed the change which had taken place in public thinking in so far as the lot of the workman is concerned and noted that Ontario legislation had kept pace with public opinion. The compensation rate originally provided for in the Act was 55 per cent. This was increased to 66⅔ in 1920, and to 75 per cent on January 1, 1950. Benefits in Ontario did not suffer by comparison with other provinces, Saskatchewan being the only other province which had established a 75 per cent rate for disability.

Average Earnings

The Commissioner was unable to recommend any change in the sections indicating the manner of arriving at the workman's "average earnings" since the Board is given very wide discretion in this regard. The Report quotes a directive of the Board laying down the rule for determining compensation in cases of temporary total and temporary partial disability.

> The earnings used as the wage basis of compensation shall be the average actual earnings for the four weeks or shorter period of employment immediately preceding the accident (omitting any badly broken week) or, if warranted, the nominal weekly wage, provided that where equitable regard may be had to the earnings for the twelve months or shorter period of employment prior to the accident.

Permanent Partial Disability

Representatives of the railways protested against the fact that some employees

were compensated for a permanent partial disability on the grounds that they would thereafter suffer a loss of earnings and were later restored to former positions with no loss of earnings. The Report describes the policy and experience of the Board in measuring the extent of permanent partial disability, an always difficult problem, and finds the provisions of the Act adequate and the manner in which the Board applies them fair and reasonable.

The Commissioner did not accept the suggestion of certain labour representatives that an injured workman should be treated as a total disability case until fully recovered, instead of, as at present, being compensated for only partial disability as he becomes able to do light work. In his opinion, Sections 38 and 39 which set out the compensation to be paid for temporary total (i.e. 75 per cent of earnings) and temporary partial disability (i.e. 75 per cent of difference in earnings before and after the accident) should not be changed.

Compensation in Fatal Cases

Apart from a recommended increase from $125 to $200 in the allowance for burial expenses, and from $125 to $175 in extra expenses allowed when the body has to be taken a considerable distance, the Report does not suggest any change with respect to the payments granted in fatal cases. Benefits under the Act are as liberal and in some instances more liberal than those provided under the Acts of the other provinces.

In discussing minimum amounts of compensation, the Commissioner stated that in the original Act no minima were fixed for either disability or death by accident. These minimum amounts were inserted in the Act in 1920 and increased in 1947 on the theory that they were necessary to provide injured workmen and their dependants in the lower wage brackets with subsistence. Since the minimum for a temporarily disabled workman is $15 a week *or* his earnings, if less than $15, a workman earning $40 a week would receive $30 compensation, whereas one whose earnings were $15 would be granted $15 compensation. In the Commissioner's view, the original purpose of the Act was that all workmen, in whatever wage bracket, should be treated alike and their compensation measured by the same standard, i.e. the same percentage of earnings. He remarked, however, that to recommend the deletion of those sections of the Act would be cruel. In this respect the Act has become social legislation and not compensatory.

Increased Compensation in Respect of Past Accidents

Mr. Justice Roach pointed out that when from time to time the Legislature provided for increases in compensation in death cases, as it did in 1920 and again in 1948, at the same time making the increases applicable to *past* accidents, it departed from the original scheme of the Act. There were only two sources from which the money could come, he commented, the employers or the Consolidated Revenue Fund of the Province. The Legislature put that burden on the employers by enacting what is now Section 33:—

> The additional moneys necessary to provide for increases of compensation in respect to accidents previously happening may be levied and collected by the Board from the employers either now, previously or hereafter carrying on industries under Part I . . .

In the Commissioner's view, it was error to provide that the additional moneys necessary should be levied upon the employers.

> The main reason advanced for increasing pensions which have been awarded in respect of past accidents is that due to changed economic conditions they are found to be inadequate. If the workman or his dependants are thus adversely affected by changed economic conditions and require assistance, the burden of providing such assistance should be borne by society as a whole and not by one group of society, in this case, industry. Industry discharged its debt by the standard which the law prescribed when the accident happened and the amount which was then paid was considered adequate. It is the lessening of the purchase value of our currency and the currency and the consequent increase in the cost of living that later made it inadequate. That is a condition of general application.

The Report, therefore, recommends the deletion of Section 33 and the insertion of a provision, as a result of which the additional sums necessary to provide increases of compensation in respect of past accidents should be paid to the Board out of the Consolidated Revenue Fund.

The Commissioner conceded that there was merit in the argument of workmen on disability pension that if circumstances warranted making increases in respect of fatal accidents applicable to past accidents, the same circumstances justify making increases in non-fatal cases applicable to past accidents. Such legislation, if enacted, would be purely social legislation, and should not be woven into the general framework of Part I of the Act.

The Commissioner recalled that Sir William Meredith had recommended that

the Government should make a substantial contribution annually towards the cost of administering the Act. His arguments were that the Act would relieve the community from the burden of maintaining injured workmen and their dependants, and by getting rid of litigation would greatly lessen the cost of the administration of justice. Section 78 provides for such an annual contribution, but no contribution has been made to the Board by the Government since 1922.

Payment of Claims

With respect to complaints that an injured workman frequently had to wait an unreasonable length of time before receiving his first compensation payment, the Commissioner was unable to suggest any improvement in the procedure prescribed by the Act. Delays were often due to failure of the employer, workman or doctor to report accidents properly, and he suggested that unions might do much in informing their members with respect to the operation of the Act and particularly by giving to each a copy of the Board's circular "Information for Workmen". Mr. Justice Roach did not see any necessity for the appointment of "Pension Advocates", which some municipal corporations in the mining area had suggested, since one of the main purposes of the Act is to obviate the need for any intervention between the Board and the workman.

Injuries Aggravated by a Pre-Existing Physical Condition

The Report recommends that a workman who is injured by accident and whose injuries are aggravated by a pre-existing physical condition should be awarded full compensation, except where the pre-existing condition in due to an injury for which the workman is then receiving compensation or was at some earlier date receiving compensation which has been commuted. In such cases, the Board now awards only 50 per cent compensation.

The Commissioner used as an illustration the case of a workman suffering from diabetes who suffered an injury due to a weight falling on his toe. The injury aggravated by the diabetes made necessary the amputation of his foot. The Act provides, however, that compensation shall be awarded for injury *caused by* accident, and in the case cited the injurious result was not caused by the previous diabetic condition but by the accident. The Commissioner felt that all workmen are entitled to the full protection of the Act without any discrimination based on their physical condition.

Continuing Injury Versus Second Injury

The question arose as to whether a workman who was temporarily totally disabled by a back sprain incurred in 1942 from lifting and who suffered a similar disability from the same cause in 1949 suffered one accident or two.

As a corrective measure for the future, Mr. Justice Roach recommended that the Board should by regulation require a workman who was off work with a compensable injury to obtain a medical certificate certifying that his disability has been sufficiently cured as to enable him to return to work. If this practice were followed, the problem whether or not a later disability may have been caused by an earlier accident should not arise.

Industrial Diseases

The Commissioner questioned the power of the Board to add any disease to the schedule of diseases (Schedule 3) unless an amendment empowering it to do so was made to the Act. [Such an amendment was made at the 1950 session of the Legislature.]

Dealing with specific diseases on which representations were made, the Commissioner recommended that lung cancer should be compensable where the workman is subjected to the inhalation of concentrated gases from coal, tar or pitch. Skin cancer among workers employed in the handling or use of tar, pitch, bitumen, mineral oil or paraffin is already in the Schedule.

Mr. Justice Roach included in the Report statistical information compiled by Dr. William Boyd, an outstanding pathologist and authority on cancer, with respect to workers at the plant of the Consumers' Gas Company in Toronto where workers are exposed to coal tar gas. Dr. Boyd observed

> (1) that the incidence of lung cancer among them is six times greater than among the male population of Ontario of the same age;
>
> (2) that among them lung cancer occurred at an earlier age than in the general population;
>
> (3) that the incidence of gastro-intestinal cancer among those workers was 27·2 per cent, and of lung cancer 45·4 per cent; and
>
> (4) that tar removed from the pipes on which the men work produced skin cancer when applied to mice.

Arthritis, the Commissioner decided, should be considered on the evidence in each case and should not be included in Schedule 3.

It was recommended that compensation should be payable for hernia only if it is

clinical hernia of disabling character and of recent primary demonstrability, if its onset is shown to have been immediately preceded by accident, if the workman immediately reported his condition to his employer or ceased work and reported within 72 hours, and where an operation, if deemed surgically advisable, is performed within two weeks of the occurrence. The Board should be given discretion to pay compensation where there is excusable failure on the part of the workman to comply, but no compensation should be payable for longer than seven days before an operation for uncomplicated hernia or for more than 42 days afterwards.

The Commissioner advised against including in the Schedule rheumatism suffered by miners and heart disease in firefighters. These were diseases which might overtake individuals in any employment.

Silicosis

The Report discusses silicosis at some length. Medical testimony on the disease included the following:—

> Basically silicosis is a disease caused by the inhalation of silicon dust and occurs in persons who have had adequate exposure, that is who have breathed that dust for a sufficient length of time. When free silica reaches the lung tissue a fibrous condition develops. . . .
>
> * * *
>
> The industries in which the workers are subject to the disease . . . include mining, sand blasting, porcelain making, rock grinding, stone cutting, moulding and the grinding of materials which are grimy with sand.
>
> The length of exposure sufficient to cause the disease in its compensable form varies in the different industries and varies also in the individuals. Taking the average worker in the various industries it would appear that miners and quarry workers may develop it in 13 to 20 years; porcelain workers in certain operations in 14 to 20 years; granite cutters in 27 to 29 years; moulders in 28 to 30 years.
>
> * * *
>
> The disease occurs in two forms. One is termed simple silicosis. . . . The other is termed complicated silicosis, that is the physical state in which the fibrotic condition is complicated with infection, namely, tuberculosis of the lung.
>
> * * *
>
> Simple silicosis renders the lung less resistant to tuberculosis. Since tuberculosis is caused by infection it is imperative that a workman suffering from simple silicosis should not be subjected to the danger of such infection. Not only is the silicotic susceptible to tuberculosis but the tuberculant is susceptible to silicosis. Therefore, a person who has tuberculosis or has had it but been cured should never be exposed to the inhalation of silica dust. It is estimated that between sixty and seventy per cent of silicotics die from tuberculosis. The complicated form is called in medical parlance tuberculosilicosis and is difficult to cure. It is not amenable to the treatment prescribed for simple tuberculosis.

Looking at the disease from the standpoint of compensability, the Commissioner stated that a workman who has simple silicosis may suffer no disability or a disability ranging from small partial disability to total disability. The worker who develops complicated silicosis suffers total disability and cannot do any work.

The usual procedure is that a workman learns that he has or appears to have silicosis on examination by his own or a plant physician or on an examination as required by the Mining Act. The disease is diagnosed by an X-ray of the chest and lungs, supplemented by a general physical examination and by the history of exposure. A claim for compensation is filed and if it is established that the workman has had a sufficient length of exposure within Ontario (the statutory period is two years), his claim is passed to the Referee Board. The Referee Board is comprised of three doctors who reside in Toronto but who periodically visit the mining areas. If in the combined opinion of the Referee Board, after a most thorough examination, a worker has complicated silicosis he is regarded as totally disabled and begins receiving total disability payments. It is much more difficult to assess the degree of disability in cases of simple silicosis. The disease is not compensable unless there is "a fibrotic condition of the lungs sufficient to produce a lessened capacity for work". A worker with partial disability commences receiving compensation payments but is examined by the Referee Board at intervals of a year or less to determine whether or not the disease is progressing. If the degree of disability increases, his pension is increased. He is advised to change his job and get away from further exposure. If he chooses to do so, he has the Board's rehabilitation service to assist him in learning a new type of work.

The Commissioner pointed out that there is no cure for silicosis. The elimination of all silica dust or the application of some method to prevent its inhalation would be a complete preventative. Various measures have been adopted to reduce the dust to a minimum. In the mining industry, a mechanism is used by which water is emitted at or near the point of drilling tools, and exhaust fans are used to remove the dust caused by drilling or blasting. A further preventative has been the use of aluminum powder on the theory that if the particles of silicon are coated with aluminum powder they are not liable to cause silicosis.

The Commissioner heartily supported a request that every reasonably possible mechanical device should be employed to protect workers from silica dust, but did not specify any devices. These would naturally vary with the work and the environment.

The Commissioner's recommendations under this heading were that "stone workers' or grinders' phthisis" should be struck out of Schedule 3, and that silicosis should be compensable where it occurs in mining, as formerly, and *also* in "every process where the workman is subjected to the inhalation of silica dust created by the nature of the work performed by him or others." Similarly, with respect to pneumoconiosis, the industries now specified in the Schedule, e.g., quarrying, stone cutting and crushing, etc., should be struck out and replaced by "every process where the worker is subjected to the inhalation of dust created by work performed by him or others in, upon or by the aid of stone, sand or metal or derivatives thereof."

[In the general regulations issued by the Board in July, 1950, "stone workers' or grinders' phthisis" was dropped, the Board apparently considering the disease to be the same as silicosis and pneumoconiosis.]

The Commissioner set out in his Report Section 155 of the Ontario Mining Act which requires workmen employed underground in a mine to be medically examined for silicosis at least once a year and to obtain a certificate certifying them to be free of the disease. He went on to say that although he could not, within the scope of his inquiry, make a recommendation regarding comparable legislation applicable to industries other than mining in which there is silica exposure, he felt that both industry and labour would approve such legislation.

[At the 1950 legislative session a Silicosis Act was passed. The Act, which was proclaimed in effect as of December 2, 1950, prohibits the employment of a worker in an industrial occupation (other than mining) which involves silica exposure unless he has a medical certificate.]

The Commissioner rejected a submission on behalf of mine workers that a special board including labour representation should be set up to review silicosis claims, stating that the present system is entirely adequate. Only experts on the subject can determine the presence of compensable silicosis and "it would be utter folly to give either management or labour any voice in determining the question."

He also turned down a suggestion that, in any industry where silica dust is present, heart disease or any disease of the respiratory or circulatory systems should be considered as industrial diseases. On the basis of the medical evidence received, there is no relation between silicosis and those diseases.

It was argued that workers who reached the age of 60 or 65 before silicosis disabled them should not be awarded a pension for life since in a few years' time they would normally have to retire. Mr. Justice Roach's comment was as follows:—

> . . . the worker is compensated, not on the basis of his full earnings, but only on seventy-five per cent thereof. What he thereby loses each year is offset by the fact that he receives it for the full balance of his life, and, by the same token, what industry saves by the worker not being compensated on the basis of his full earnings, is offset by the fact that industry pays it for the full balance of the worker's life. The fact that the worker is disabled by industrial disease when close to his retiring age is no different to the case where at the same age he is disabled by accident. In the latter instance he is compensated for life. So should he be in the former.

A related suggestion was to the effect that it was anomalous that a worker who normally receives a retirement pension at 65 because he is too old to work should at the same time receive compensation because he is unable to work. In the Commissioner's opinion,

> it would be a cruel philosophy by the application of which a worker who had earned a retirement pension by reason of years of service should be deprived of it by industry injuring him . . . he is entitled to both. He has purchased both; the retirement pension by years of service; the pension under the Act by being the victim of the accident or the disease.

Representatives of the stove manufacturing industry stated that there is a danger of an excessively heavy burden of assessment being placed on the industry for pensions to silicotics and their dependants. The Commissioner observed that the danger presently exists. Silicosis was not recognized as an industrial disease in the foundry industry until 1926 and by that time there was an accumulation of silicotics in the industry. Since silicosis develops more slowly in workers in the foundry industry than in mining, the burden has become heavy in recent years and will continue to be so. The average cost per silicosis claim, according to the Board, is $11,000. Pre-employment and periodical examinations, as in the mining industry, would have lightened the burden of assessment by, for instance, preventing workmen with some degree of silicosis from coming from other provinces and becoming, as the disease progressed, a burden on industry in Ontario.

When silicosis became an industrial disease in mining, the Board established a separate Silicosis Account into which assessments are paid and out of which all payments for silicosis are made. The Board's policy is to have the balance to the credit of the Silicosis Account as nearly as possible equal to the estimated outstanding liability. To offset severe losses in 1945-46 and to take care of a large increase in claims, the assessment rate was increased. The balance to the credit of the account at the end of 1948 was $2,071,931.98 against an estimated liability on claims then payable of $3,694,870.30.

Medical Aid

The Commissioner recommended only minor changes with respect to medical aid. One was that the term "medical aid" should include the aid of chiropodists registered under The Chiropody Act, 1944, and that drugless practitioners registered either under the Drugless Practitioners Act or The Chirpody Act should be required to furnish reports to the Board. An injured workman is entitled to be treated by the drugless practitioner of his choice but he is also required, if the injury is one of seven days' duration, to submit to an examination by a duly qualified doctor. A submission that this regulation should not apply where the disability was a minor one of less than 14 days' duration was rejected. The Commissioner also opposed a suggestion that adherents of the Christian Science Church should not be required to submit to medical treatment in order to receive benefits under the Act, on the grounds that a member of that church may still have resort to other means of cure "but not at financial cost to the employer or the accident fund."

The Commissioner commended the Board for having established the Malton Convalescent Centre. The patient population of the Centre varies from 350 to 400 at any given time. A large number come from places outside of Toronto, and over 90 per cent are admitted at the request of their attending physician. The whole cost of operating the Centre is charged to medical aid.

Rehabilitation

The Report states that the rehabilitation measures taken by the Board, i.e. the process of lessening or removing physical handicaps resulting from injuries, received the unstinted endorsation of both employers and workmen appearing during the inquiry.

The discussions touched on what the Commissioner described as "rehabilitation in the broadest sense", that which is provided when an employer takes an injured workman back into his employ in a capacity in which his physical disability is not a handicap.

> The psychological effect on the injured workman who is enabled to get back into his former industrial surroundings, even at a lighter job and less pay but again associating with his fellow workmen, is unquestionably most beneficial. Physicians specializing in industrial medicine are unanimous in their opinion that when the workman gets back into his former surroundings where his thoughts are concentrated on his job rather than on himself, his morale is greatly improved and is conducive to a hastened recovery.

It was stated on behalf of industry that in some cases employers were prevented by the seniority provisions of collective agreements from providing suitable work for the purpose of rehabilitation of a workman with a partial disability.

The suggestion was made, but rejected by the Commissioner, that the Act should be amended to provide that an employer may place an employee in a suitable job, having regard to the extent of his recovery, notwithstanding the provisions of a collective agreement and without affecting the seniority provisions of the employee in question. Mr. Justice Roach considered that the matter was one more properly left to collective bargaining than covered by legislation and that some modification of the suggested provision might be included among the terms of a collective agreement.

Accident Prevention

Some of the more important recommendations of the Report have to do with accident prevention. The Commissioner found the present provisions of the Act dealing with accident prevention inadequate and in need of revision.

> Since accident prevention is of common interest to both employers and workmen it would seem logical that they should both actively participate in any organized system the purpose of which is to lessen industrial accidents. As between the two groups, it seems to me that the workmen are much more vitally interested than the employers. If a workman is maimed in an industry, the employer has to pay the compensation but no monetary allowance can ever adequately compensate a workman who has to go through the balance of his life minus an eye, or a hand or some other member.

He criticized the present system in that it does not provide any means which will ensure the active participation of labour in accident prevention work.

In Mr. Justice Roach's opinion, any completely organized system of accident prevention should include committees of

employers and workmen at plant level. Such committees should be given specific duties and required to report periodically to the Board. He recommended, therefore, that the Board should issue a regulation requiring an accident prevention committee to be set up in every undertaking in which there are 20 or more workmen. This is the requirement in British Columbia. In Alberta, a committee must be established where 10 or more workmen are employed.

Secondly, the Commissioner found that the relationship between the Board and the eight industrial accident prevention associations which have been formed by employers in the Province and approved by the Board is "much too remote."

> There is no statutory obligation on any of those associations to report to anyone . . . There is no statutory obligation on them to continue to function and the extent to which they function is their own business . . . if any one of them ceased to function tomorrow there are no provisions in the Act for the carrying on of the important work of accident prevention.

The Commissioner was strongly of the opinion that "a completely organized system for accident prevention requires a code of accident prevention regulations which shall constitute the minimum and for the breach of which adequate penalties may be imposed." He recommended, therefore, that the whole subject of accident prevention in all the industries in Schedule 1 (except mining which is covered by the Mining Act) should be under the direct jurisdiction of the Board, and that sections similar to those in the British Columbia Act giving the Board wide powers should be incorporated in the Ontario Act. He further proposed that the Board might adopt any accident prevention association as its agent to carry out such administrative duties as the Board may prescribe.

Merit Rating

Under the present system, the assessment rate levied upon employers in each class is based upon the accident experience of the industries within the class. No distinction is made between the employer who has a favourable accident record and the one who has not. The Act has since 1917 permitted a system of merit rating to be adopted, if deemed proper by the Board, and until 1938 various systems were tried but none proved satisfactory.

Labour spokesmen opposed any merit-rating system, as did some representatives of industry. Others advocated the adoption of some such plan arguing that the employer who has a favourable accident record is, in effect, punished by the bad record of other employers in the same class. This group stated that they had experts studying the problem and the Board expressed its willingness to study any system which might be submitted to it.

The Commissioner, quoting the words of Mr. Justice Middleton, pointed out there were some dangers involved:—

> Great care would have to be taken in the application of any such merit-rating system because the whole principle of collective liability is based upon the doctrine of average. It is not enough that for a year, or even a short series of years, a particular factory escapes having any serious accident. The whole principle is that the fortunate must bear some portion of the burden of the unfortunate. This is illustrated in fire insurance. The rate is fixed having regard to experience, but no householder ever expects to receive fire insurance at a reduced premium simply because he has carried insurance for so many years and never had a fire.

Assessments

It was alleged by one employer that he was being assessed at too high a rate in respect of his clerical staff, having regard to rates in the same location on other employers in respect of their clerical staff. Mr. Justice Roach explained the Board's practice which he considered reasonable and practical in view of the varied conditions which may exist. This is that an industry is assessed as a unit. The various types of occupation carried on are not segregated. The assessment rate is fixed with respect to an industry as one of a class having regard to the accident experience in the class and it is applicable to all employees of the employer, whether factory employees or office employees.

Another problem discussed was that of double assessments which are payable by an employer whose chief place of business is in Ontario and whose employees are temporarily sent to work out of Ontario. In such case, the employer is assessed in both jurisdictions. In the event of an accident, the workman may elect in which jurisdiction he will claim compensation and he will naturally elect to claim compensation under the Act which contains the more generous provisions. "Thus although the employer is subjected to double assessment the injured employee or his dependants obtain only single coverage. This obviously places an unfair burden on the employer." The Report recommends that a provision (comparable to that contained in the Alberta, British Columbia, Manitoba, Newfoundland and Saskatchewan Acts) be added to the Act permitting the Board to arrange with the Board of any other province to avoid duplication of assessments in such circumstances.

Section 5 (6) which makes an employer individually liable to pay the compensation when he has not "fully contributed to the Accident Fund in respect of all the wages" of his workmen on the job out of Ontario seemed to the Commissioner to be in conflict with other provisions of the Act. This section was not in the Act as drafted by Chief Justice Meredith but was introduced in 1915. Compensation is paid out of the Accident Fund to the workmen of an employer in Schedule 1 who is in default in paying his assessments. In the same way it should be paid where an accident happens out of Ontario. It was suggested that subsection 6 was in the nature of a penalty, but the Commissioner observed that penalties for failure to pay assessments were elsewhere provided for in the Act.

Third Party Liability

Mr. Justice Roach indicated certain defects with respect to the provisions under which an injured workman or his dependants have a right of action against some person *other* than his employer. In such case, he or they may elect to claim compensation or to sue the third party for damages.

If he elects to sue, and recovers less than the amount of compensation to which he would be entitled, he must be paid the difference as compensation.

If, on the other hand, the workman claims compensation, the employer if he is individually liable to pay it, or the Board if the compensation is payable out of the Accident Fund, may sue the third party to recover the damages which the workman could have recovered if he had sued instead of claiming compensation. In the latter case, the employer or Board may sue for two items of damages, namely, the workman's pain and suffering and his full loss of earnings, and under the Act may retain both. The Commissioner considered that an employer should not be permitted to retain anything *over and above* the amount which the accident had cost him by way of compensation. It was unfair for an employer to recoup his losses in one case at the expense of the workman in another.

Secondly, a workman may, without bringing an action, settle with the third party for less than the amount he would have received as compensation. The employer or Board being liable for the difference is unjustly burdened by having to pay a portion of the third party's real liability.

To remedy these defects, the Commissioner proposed an amendment providing that no settlement may be made (except where the amount of the proposed settlement is less than $300) without the approval of a judge of the Supreme Court. If the settlement is approved, the judge shall determine what part of the total is in respect of the workman's (1) pain and suffering; (2) out-of-pocket expenses; (3) loss of earnings both present and prospective.

Further, if the workman or his dependants elect to claim compensation, the employer if individually liable or the Board may but shall not be required to bring an action against the person at fault, and any sum recovered *over and above* the compensation payable and the costs of medical aid and rehabilitation and the costs of the action should be paid over to the workman or his dependants, upon their releasing the Board from any further obligation to pay compensation. If the workman should decline to release the Board from further responsibility, the full amount recovered should form part of the Accident Fund, or where the action is brought by the employer might be retained by him.

Abolition of Schedule 2

Industries in Schedule 1 are collectively liable to pay compensation while industries in Schedule 2 are individually liable. So far as the operation of the Act is concerned, that is the only difference between them.

The Commissioner would not accept the suggestion that Schedule 2 should be abolished, stating that in the light of the experience and wishes of the employers in Schedule 2 and the contentment of the great majority of their employees it would be folly to transfer industries from Schedule 2 to Schedule 1 or to eliminate Schedule 2 entirely by transferring all industries to Schedule 1.

Quoting the 1932 Report of Mr. Justice Middleton that the workman's real complaint in the matter is based on a psychological phenomenon in that in Schedule 2 his claim is made against an individual company as contrasted with the claims that are made in Schedule 1 industries against an impersonal fund, the Commissioner remarked that the "psychological phenomenon" was not sufficient justification for interfering with a system that had worked well for 35 years.

Commutation of Periodical Payments by Employers in Schedule 2

The Act permits an employer in Schedule 2 who is individually liable to make a weekly or other periodical payment of

compensation to apply to the Board to allow his liability to be commuted by the payment of a lump sum equal to 75 per cent of the annual value of the weekly or other periodical payment. The Commissioner considered that an employer who desires to pay to the Board 100 per cent of the present value of the payments instead of 75 per cent should be allowed to do so, and suggested an amendment accordingly.

Appeals from the Board

The Commissioner rejected a suggestion that there should be a limited right of appeal to the courts from decisions of the Board, noting that after 35 years' experience labour and management were unanimous in not wishing any change in this feature of the Act.

Composition of the Board

Several submissions were made regarding the composition of the Board, e.g. that its members should be increased from three to five, but the Commissioner did not favour any change. He pointed out that Board members occupy a position in very many respects comparable to that occupied by a judge in the courts of the Province. A Board member "may have been appointed from the ranks of industry or labour but once he is appointed he owes allegiance to no group."

> The Board as presently constituted, in my opinion, is as well balanced as it is possible to have it, a member formerly associated with industry, a member formerly associated with labour, and a member of the medical profession.

Annual Reports of the Board

Several complaints were made that the annual reports of the Board since 1943 have not been sufficiently extensive. This was largely due to the fact that the Act formerly required the report to be filed by January 15 and the Board's fiscal year ends on December 31, leaving only two weeks for its preparation. The Board informed the Commissioner that it was giving consideration to these complaints.

Investments

Under the Act the Board is authorized to invest any accumulated funds in securities issued by the Province of Ontario or by the Dominion Government or in securities the payment of which is guaranteed by either of these Governments. The Report recommends against any further extension of the investment powers of the Board.

Procedure Concerning Amendments

Mr. Justice Roach included in his Report an excerpt from the brief of the Canadian Manufacturers Association urging that employers should be given an opportunity of studying and making representations with respect to any important proposed changes in the Act, and that Ontario should have periodical reviews of the Act by a judicial commissioner. In some provinces, e.g. Alberta and Saskatchewan, it is the practice to open the Act for review periodically, usually every four or five years.

(*Concluded From Page 302*)

vegetables offset seasonal declines in eggs and oranges . . . Wholesale prices of industrial materials were firmer again in February, and the composite index for 30 commodities moved up to 212·3 for the week of February 23, from 207·3 on January 26 . . . The number of new dwelling units completed in Canada (excluding Newfoundland) last year was slightly lower than in 1949, while the number of starts was larger. The carryover of dwellings in various stages of construction at the end of 1950 was therefore somewhat greater than a year earlier . . . During the first 11 months of 1950, shipments of primary steel shapes totalled, 2,582,617 tons as against 2,473,907 in the same period of 1949. . . . Canada's total domestic exports during January were substantially higher in value than a year ago, and, contraray to the usual trend, only slightly down from the high levels of the closing months of the previous year. Most of the gain over January 1950 was due to another marked rise in the value of shipments to the United States. Domestic exports to all countries in the month were valued at $285,100,000, an increase of 29 per cent over the figure for January a year ago.

LEGISLATIVE PROPOSALS OF LABOUR ORGANIZATIONS IN QUEBEC

Early in January, the Hon. Maurice Duplessis, Premier of Quebec, received delegations from the Quebec Provincial Federation of Labour (TLC), the Canadian and Catholic Confederation of Labour, and the Quebec Joint Legislative Committee of the Railway Transportation Brotherhoods. Summarized below are the briefs of the three organizations, and the reply of Mr. Duplessis.

Quebec Provincial Federation of Labour (TLC)

The Quebec Provincial Federation of Labour (TLC-AFL) submitted its annual brief to the provincial Cabinet on January 9, 1951. The delegation was headed by Mr. Marcel Francq, President of the Federation,[1] who read the brief.

The brief opened with a request by the Federation that provincial authorities be technically prepared to assume rent controls as soon as federal controls are lifted.

Dealing with labour legislation, the Federation requested that the Government, in codifying labour laws, draw its inspiration from the proposed Labour Code submitted recently by the Superior Labour Council.

The Federation congratulated the Government on the recent increase in the provincial minimum wage.

A further request concerned free schoolbooks. The Federation expressed regret that this question is left to the discretion of school boards and demanded compulsory application.

Other requests made by the Federation dealt with compulsory notice of dismissal, a shorter work week, remuneration of arbitration board members in cases involving unfair dismissal of municipal and schoolboard employees, abolition of the sales tax, old age pensions, forest protection, industrial accident prevention, compulsory automobile insurance, level railroad crossings, welders' and pipefitters' permits, fire protection, remuneration of jury members and witnesses in courts of justice, elimination of home work, racial intolerance, payment of subsidies on milk, and loss of tools on construction works.

The Federation of Labour went on record as favouring the establishment of a provincial lottery, to be administered by a committee of leading citizens selected outside of political groups, the revenues deriving therefrom to be devoted exclusively to the improvement of social services.

Labour Code

The Federation endorsed the proposed Labour Code prepared by the Superior Labour Council, and recently submitted to the Premier. The proposed Code was drawn up after extensive study within the Council, a tripartite body which brings together representatives of the main industrial and labour organizations, as well as sociologists and Government representatives who present the people's point of view. The Federation expressed the hope that the Government would consider these proposals and introduce a Labour Code at an early session.

The Federation stated it would like to see its affiliated unions, "nearly all of which have been in existence in the Province for more than 60 years" granted legal recognition by the Government.

Minimum Wages

The Federation expressed appreciation of the Government's recent decision to increase minimum wages, but did not think the 20 per cent increase sufficient, and requested the Government to consider a further increase as soon as possible, that would fully compensate for the rise in the cost of living.

The brief reiterated requests made last year concerning Ordinance No. 4. "We still believe," it stated, "that this General Ordinance, covering industry and commerce as a whole, has been of great service to the workers of the Province in the past. But because of the accelerated development and diversification of our industry and commerce, the Ordinance does not quite meet the requirements of present-day conditions."

[1] Appointed recently as labour member of the Labour Relations Board of the Province of Quebec.

The Federation favoured, in principle, eliminating industrial zones completely. It realized, however, that such a step presents certain difficulties at the present time. The Ordinance as it now stands tends to create a class of under-privileged persons in certain zones, it said. "The grouping of enterprises by industry and locality, instead of by zones, taking into consideration the nature of the industry and the competition which may exist between one locality and another, would, we believe, remedy the present situation."

Notice of Dismissal

The Federation again deplored the fact that the only way of establishing notice of dismissal is through court procedure. Such a situation threatens to burden the rolls of the Magistrate's Court and create a "bottleneck," it pointed out. The brief urged the passing of an Ordinance, through the medium of the Minimum Wage Act, along the lines of Ordinance No. 3 (paid vacations), stipulating that all employers must serve notice of dismissal based on the employee's payroll period.

Hours of Work

The brief again asked for the establishment of a shorter work week. "The tempo of industry today, the speed at which employees must work, and the close concentration demanded by precision operations, are all causes of increased fatigue, and in order to safeguard the health of workers, hours of work should be shortened." The Federation was of the opinion that the 40-hour week is now sufficiently generally established for the Minimum Wage Board to amend its Ordinances accordingly.

Municipal and School Corporation Employees

While recognizing that the autonomy of municipal and school corporations must be safeguarded, the brief expressed the view that it should be possible, without impairing the powers of such corporations, to protect their employees against suspension and unjust dismissal. The Federation suggested that the Government should set up a permanent arbitration board to rule upon such disputes, whose decisions would be final and without appeal; the tribunal to be composed of three members—a judge appointed by the Government, and two arbitrators nominated by the corporations and the unions concerned, respectively.

Rent Controls

"If federal controls are abolished and are not replaced by any other control, the result on workers' family budgets will be disastrous," the brief declared. Abolition of all control would bring urgent demands from the workers for wage increases, it warned.

The Federation requested the Provincial Cabinet to give the problem "all the attention it deserves and, in view of the untenable conditions in which the workers would find themselves, to take such action as might be necessary, and thus avoid the bitter results of social unrest."

Housing Co-operatives

The Federation declared that the housing problem would only be solved in the Province when the provincial Government agrees to grant substantial loans to responsible organizations, such as housing co-operatives, that would enable them to build at a faster rate than at present. It suggested that the Government give special consideration to housing co-operatives, and that for units costing not more than $800 per unit the Government should grant a loan, similar to the farm loan, covering the total cost of construction, less labour.

The brief also recommended that labour representatives be appointed to the Housing Investigation Commission.

Education

The Federation expressed regret that the Government had decided to leave the question of granting free school-books to the discretion of the school-boards. A great number of corporations, the brief remarked, have decided to continue availing themselves of this right. On the other hand, it stated, some corporations have done away with this practice, thereby placing the children attending their schools at a disadvantage. The Federation urged the Government to again make compulsory the granting of free school-books, and to increase the number and amount of scholarships for children of working families.

Abolition of Sales Tax

The Federation requested abolition of the two per cent provincial sales tax. This, it pointed out, would benefit not only all taxpayers in the Province, but would also afford relief to people living in urban centres who are more heavily burdened by municipal taxes. The brief further suggested that the five per cent tax on patent medicines be abolished.

Old Age Pensions

The Federation urged the Provincial Government, in its negotiations with the Federal Government, to do its utmost to ensure that "our older persons be provided pensions to such amount as will make allowance for the considerable rise in the cost of living, and at an age which more closely coincides with that at which it becomes impossible for a worker to find employment."

Workmen's Compensation Act

Among other suggested amendments to this Act, the Federation of Labour advocated, as an ultimate objective, a uniform compensation rate equal to 100 per cent of the injured worker's earnings, by interprovincial agreement. It recommended that in the meantime the Quebec Government increase, as early as possible, the rate of compensation to 75 per cent of the injured workman's earnings. It also requested that the application of the Act be extended to all trades and services, to all industrial diseases and accidents due to the nature of the work, and that compensation be paid from the date of accident or disability without any waiting period.

Prevention of Accidents

The brief again urged that inspectors of the Industrial and Commercial Establishments Inspection Service be brought under the jurisdiction of the Workmen's Compensation Board, and that they be required to take an intensive course on industrial safety and hygiene.

Automobile Insurance

It was the opinion of the Federation that automobile licences should be granted only to those persons who can prove that they hold automobile insurance policies.

The brief proposed that the driving licence of a person arrested for driving while under the influence of liquor be suspended for one year for a first offence, five years for a second offence, and life suspension for a third offence.

The Federation also urged the Provincial Government to amend the Motor Vehicles Act to make illegal the driving of a vehicle by the same operator for more than 10 consecutive hours in 24.

Canadian and Catholic Confederation of Labour

On January 10, 1951, the Canadian and Catholic Confederation of Labour submitted its annual brief to the Quebec Provincial Government. The delegation was headed by Mr. Gérard Picard, General President, and included the principal Vice-Presidents of the Confederation and the Secretary-General, Mr. Jean Marchand, who read the brief. The Hon. Antonio Barrette, Minister of Labour, introduced the delegation to the Premier, the Hon. Maurice Duplessis, and members of the Provincial Cabinet.

The brief first reviewed some of the outstanding events of 1950, such as the publication of the joint letter of the Bishops of Quebec on the labour problem, the Federal-Provincial conference on constitutional questions, the decision of the Federal Government to withdraw from the field of rent control, and the submission to the Premier of the Province, by the Superior Labour Council, of a series of recommendations on labour legislation.

Taxation Reforms

With regard to taxation reforms, the CCCL felt that federal and provincial powers should be more specifically defined, and that methods of collection should be simplified.

"The best safeguard of provincial autonomy," the brief stated, "is contained principally in the constitutional guarantees with regard to the French language, the Catholic religion, and education. Any taxation plan must meet these basic requirements." The CCCL again declared "that the greatest error which could be made would be to allow the century-old rights of the French-speaking Canadians and their social and economic welfare to come into conflict."

Old Age Pensions

The brief was devoted mainly to the question of old age pensions, and contained an explanation of the three-way pension plan adopted at the last CCCL annual convention held at Sherbrooke in September (L.G., Nov., 1950, p. 1820).

The CCCL again suggested that consultative councils be set up to supervise the application of the Act, and to ensure the payment of pensions to all persons entitled to them.

The brief referred to the Marsh social security plan, and to the belief of its author that as regards eligibility, "the means test, even should it become more liberal, would still hold the stigma of public charity, penalize economy, and encourage fraud."

Rent Control

The brief requested the Government to take over rent control at once, in the interest of the small wage-earners and their families. Because of the announcement made the previous day by the Hon. Maurice Duplessis to the Quebec Provincial Federation, that he would introduce a rental control Bill at the reopening of the session, this question was not discussed.

Labour Code

The brief pointed out that the Superior Labour Council had last year prepared a series of recommendations concerning labour legislation in the Province of Quebec, and requested that a special committee of the Legislative Assembly be established to study any legislation proposed, and to hear representations from all interested parties. "In any case," the brief stated, "the recommended code should not be amended without consulting the Council."

Professional Corporations

The brief made reference to the creation, under special laws, in the course of the year, of a number of new "professional organizations," which, "in the name of public interest," are granted almost absolute control over the practice of their particular trade or profession. The CCCL called the attention of the Government to certain privileges which are obtainable by these organizations, stating that they constitute an encroachment on the field of collective bargaining, and that "these corporations have not as their object the establishing of well-ordered relations between employers and employees."

The Confederation voiced its objection to the recognition of these corporations, or their branches, by the Labour Relations Board, and to their determining the conditions of work of their members. Objection was also taken to the fact that such corporations are permitted by law to fix fees to their clients and to enter into price agreements.

SUPPLEMENTARY BRIEF

Apart from the questions of general interest dealt with in the main brief, the CCCL submitted to the Premier and the Cabinet, various resolutions, most of which were adopted at the last annual convention.

Housing

The supplementary brief requested a "progressive and generous" policy in the matter of family homes, and close co-operation by all, to improve the lot of tenants and increase the number of small property owners.

The greatest difficulty, the brief noted, arises from the fact that low-income workers do not have the required initial payment for the purchase of a lot, or for carrying out the work to the point where they will be entitled to the benefits provided under existing legislation.

The brief mentioned that the annual meeting had approved the proposals of the Federation of Housing Co-operatives of the Province of Quebec (L.G., April, 1950, p. 467), suggesting that a contribution be made from public funds as follows: 25 per cent from the municipalities, 37½ per cent from the Provincial Government, and 37½ per cent from the Federal Government.

The CCCL suggested that an agency be appointed by the Provincial Government, with sufficient funds, to discount mortgages held by French-Canadian financial institutions, whenever the need arises, so that credit unions (caisses populaires) and other loan institutions might be able to provide the necessary financial assistance to future property owners. The ideal method, however, the brief pointed out, would be for the Government itself to grant loans to individuals and to housing co-operatives, through an appropriate agency.

Professional Syndicates Act

The CCCL proposed that the incorporation of workers' syndicates under the Professional Syndicates Act be made compulsory, in order that they may benefit by existing legislation and enjoy the privilege of representation on public bodies. The Federation also recommended that the Professional Syndicates Act be amended to facilitate the incorporation of all workers' professional syndicates; that the number of persons necessary for the incorporation of a professional syndicate be reduced from twenty to fifteen; that all professional syndicates duly incorporated be listed in a special register at the Department of Labour; and that the administration of the Act be entrusted to the Minister of Labour.

Labour Relations and Trade Disputes Act

The Confederation proposed, among other amendments, that the Labour Relations Act be made applicable to professional workers employed exclusively by municipalities, and also to foremen who wish to bargain collectively with their employers; that no certification be granted until the organization has proved that it has no affiliation with any organization in which

the employer has a part, and that it is affiliated to a recognized labour organization; that the Labour Relations Board should not be authorized to certify any association of employers; and that any associations established by or dominated by employers or their agents be prohibited.

The brief suggested that the date of application of arbitration decisions should be determined by law, as follows: from the normal expiry date of the former collective agreement, if such an agreement existed, or, where no previous agreement existed, from the expiry date of the notice required by law for the opening of negotiations.

The Confederation also requested that in the case where an employer, after the signing of a collective agreement, consigns the work to sub-contractors, he should be held responsible for seeing that the rates of wages and conditions of work specified in the collective agreement are adhered to, in the same way as in the case of an order made under the Collective Agreement Act.

The brief further urged amendment of the Act empowering the Labour Relations Board to take action in cases of violation of the Labour Relations Act, or the Disputes Between Public Services and Their Employees Act, and that when a strike has been legally called, all the workers in the collective bargaining unit should be compelled to participate in it.

Collective Agreement Act

The CCCL requested that the Collective Agreement Act should apply to all public bodies; that the Minister of Labour should not amend an Order, or a request for an Order, without first consulting the interested parties; and that the Minister restore in the Collective Agreement Act those clauses which have been taken out, especially in districts where apprenticeship centres are in operation.

The brief urged, among other suggested amendments to the Act, that in the case of an order relating to the construction industry, collective bargaining should be made compulsory, and that the contracting parties should have the right to conciliation and arbitration, in the consideration of amendments to the Order, independent of union recognition; also that strikes and lockouts may be resorted to after fourteen days following the arbitrator's decision.

The Confederation requested that the Cities and Towns Act, the Municipal Code, the Public Education Act, and the Parish Councils Act, be amended so as to indicate clearly that corporations existing by virtue of these Acts have power to sign collective agreements with trade unions, and that they may be brought under the Collective Labour Agreements Extension Act by decree, if they are not signatories to the agreement.

The brief recommended that the retroactive effect of collective agreements be made binding from the normal date of renewal; that higher fines be imposed for employers who contravene the law by employing too many apprentices in proportion to the number of journeymen; and that the Department of Labour carry out a suitable propaganda campaign to inform the public as to the distinctions to be drawn between syndicates and parity committees.

The right to strike

The CCCL requested that injunctions against an association of workers who call a strike upon termination of proceedings and time limits provided by the present Act be prohibited; and that during the entire duration of the strike the establishment concerned be required to close its doors, if all the workers, within the meaning of the Act, are represented by the association or associations declaring the strike; and in cases where only a group of employees of an establishment are on strike, that the establishment concerned be prohibited from pursuing any of the activities generally practised by the workers involved (L.G., Nov., 1950, p. 1831).

The Confederation also requested that all picketing be prohibited for the duration of the strike, and that an employer be restrained from retaliating against the strikers when they return to work.

The brief suggested that as a last resort, the Government might take over temporarily the establishment or establishments in which the strike occurs, the Government assuming all the responsibilities of management in negotiating with the workers' organization a collective agreement, which would bind the employer in the same way as if he himself had negotiated and brought about such an agreement.

Minimum Wages

The CCCL requested an amendment to the Minimum Wage Act to provide for a wage bonus for night workers; and that the minimum wage throughout the Province be established at seventy-five cents per hour, with other rates established by orders of the Minimum Wage Board increased proportionately.

The Confederation also requested that a 35-hour work week be established under the Minimum Wage Act for women and girls.

and a 40-hour week for male workers, and that workers affected by the reduced work week should receive wage increases so that their income will in no way be diminished.

Workmen's Compensation Act

In regard to Workmen's Compensation, the brief urged that the Commission be responsible for the re-establishment of injured workmen and victims of industrial diseases, and that workers suffering from dermatoses, silicosis, asbestosis, and similar industrial diseases, who are placed in other occupations, should receive compensation when the wage paid in the new occupation is less than they would receive if able to follow their regular occupation. The Confederation also asked that decisions of the Commission should not be regarded as final, but that claimants should have the right to appeal, without cost, to the Superior Labour Council. In addition, the Confederation requested that all employers, including hospitals, religious institutions, and school-boards, be brought under the scope of the Workmen's Compensation Act.

The brief urged the establishment by the government of medical clinics in mining and industrial centres, and the appointment of a permanent Commission physician to each clinic, so that all workmen might receive free examinations periodically. The Confederation further proposed that the entire population of a given community be given the privilege of having an examination when a mobile clinic visits the community, independent from examinations that may be given in an industrial plant.

It was also requested that the Government should add to existing health units an industrial clinic, under the jurisdiction of the Department of Labour, and appoint on it, on the request of each central council, a physician having no connections with any company.

The CCCL recommended that special grants be made to the medical faculties of our universities, to enable them to undertake scientific research on asbestosis, to give to the medical world precise information on this disease, on the possibility of correct diagnosis, and on the method of treatment.

Schools of Apprenticeship

The brief urged that the Government take the necessary steps to establish apprenticeship schools in average-sized towns, and to provide the necessary equipment in such schools so that practical training on a wider scale may be given in the plumbing and pipefitting trades. In this connection, it suggested that the Aid to Youth Act be made applicable to the apprenticeship centres.

Public Education

The CCCL was of the opinion that education should be made compulsory up to the age of 16, and favoured free textbooks. It expressed a desire for secondary and university education to be made more readily available to the less fortunate classes of society.

Needy Mothers and Wives, and the Blind

The brief urged that allowances for mothers and the blind be increased by $10 a month at least, and suggested that the Mothers' Allowances Act be extended to cover needy mothers and wives who are not entitled to old age pensions. At the present time, the brief states, needy wives without children, and needy mothers without dependents, have no benefits under the Act.

Immigration

In the field of immigration, the CCCL asked that the Quebec Provincial Government make annual grants to private organizations concerned with securing immigrants sympathetic to French-Canadian aims.

Company Towns

The CCCL expressed the view that the establishment of "company towns" should be strictly forbidden. "This system is anti-democratic," the brief stated.

Other recommendations put forward included: abolition of the 4 per cent provincial-municipal tax on all articles; compulsory automobile insurance; continuation by the Government of the development of water power in the Province; tightening of supervision over lumbering wastage and indiscriminate depletion of our forests; elimination of level crossings; and prohibition of the sale of immoral publications.

The CCCL again declared itself in favour of the establishment of a provincial lottery.

Railway Transportation Brotherhoods

The Quebec Joint Legislative Committee of the Railway Transportation Brotherhoods submitted its annual brief to the Premier, the Hon. Maurice Duplessis, and members of his Cabinet on January 10, 1951. The delegation included Mr. J. P. St-Pierre, Chairman, representing the Brotherhood of Locomotive Firemen and Enginemen; Mr. A. Vincent, Vice-Chairman, representing the Brotherhood of Locomotive Engineers; Mr. W. A. Allan, representing the Brotherhood of Maintenance-of-Way Employees; and Mr. E. Messier, representing the Order of Railway Telegraphers of America.

Education and Immigration

Following a statement on the "keen interest" taken by the railway workers in the home and community life of their fellow citizens, and in improving the educational opportunities of the younger citizens, the Committee recommended that the two official languages, French and English, be taught in all of the elementary school grades, not later than the third grade; that the costs of elementary education of immigrants, old and young, should not be borne entirely by the Province, but that the Federal Government should bear its share; and that the question of uniformity of all school text-books should be studied, with a view to reducing the cost of elementary education.

Health Insurance

The Railway Brotherhoods requested the Provincial Government to take part in the National Health Program initiated in May, 1949, "a program which prepares the way for a National Scheme of Health Insurance," by availing itself of the grants now available to the provinces for the following purposes: health survey, tuberculosis control, mental health care, venereal disease control, aid to crippled children, professional training, public health research, control of cancer, and hospital construction.

Public Safety

The railway workers recommended new safety regulations to eliminate as much as possible road hazards and accidents The memorandum suggested, among other recommendations, that all drivers of motor vehicles be required to pass a qualifying examination; that buses, trucks, trailers and automobiles be subject to a periodical mechanical inspection; that not more than one trailer be permitted to be operated by any motor vehicle; and that distinguishing tail lights be displayed on all trailers.

Level Crossings

The Committee referred to previous representations on the subject of level crossings, and restated the special interest taken by railwaymen in the question of the abolition and protection of level crossings. To reduce hazards at level crossings of highways and railways, the railway workers recommended separating the two means of transport, either by the construction of overhead or under-pass crossings, or by re-location of the highways, and again urged that in new construction or re-location of highways, where the traffic warrants such a measure and engineering possibilities permit, all level crossings be eliminated.

The memorandum made reference to the responsibility of the Federal authorities in this field which, it pointed out, are limited to the provision of warning-signals within the limits of the railway right-of-way, and urged the Provincial Government to erect on all highways, at appropriate locations, at least 300 feet from the crossings and on each side of the right-of-way, an advance warning reflector sign.

Old Age Pensions

The Committee expressed hope that Federal-Provincial agreement would be reached, so that old age pensioners in Quebec might benefit by increased monthly allowances. It was recommended that the qualifying age be reduced to 65 years; that the monthly benefit be not less than $50; that the means test be abolished, with the proviso that all persons whose income exceeds $3,000 be subjected, in as much as the surplus is concerned, to the provisions of the Federal Income Tax Act. Such a policy, it was observed, would follow the same principles as now apply under the Family Allowances Act.

Workmen's Compensation

The memorandum acknowledged that the decisions of the Commission are "absolutely fair within the limitations of the Act," but suggested certain amendments to ensure application of the Act to workers learning a trade who are not considered as apprentices; also that an injured workman

should not be required to wait longer than three days to qualify for compensation; that the reporting of accidents should not be unduly delayed; and that the scale of compensation should be raised to 75 per cent of the wages.

The Railway Brotherhoods asked that the Act be amended to allow the Commission to prepare a rating schedule of earning capacity impairment for specified injuries or mutilation, to be used as a guide in determining compensation payable in permanent disability cases.

In regard to temporary partial disability, the memorandum asked that the compensation provided be continued as long as the disability lasts, and as long as the workman is unable to resume his former occupation, or until he has been placed in equally remunerative employment.

The railway workers also asked that the ceiling on wage earnings employed in the computation of compensation benefits be increased to $3,000.

Oleomargarine

The Committee expressed the view that, subject to proper supervision, inspection and distinctive marking, to safeguard quality and prevent fraud, this product should not be denied to Canadians.

The memorandum invited the Premier and members of the Provincial Cabinet to name representatives of the Railway Transportation Brotherhoods as members of the agencies concerned with the study and the application of measures of interest to labour, and offered fullest co-operation in the study of those problems with which they as railway workers are familiar.

Reply of the Hon. Maurice Duplessis to the Three Briefs

Rent Control

In reply to the recommendations concerning rent control, the Quebec Provincial Premier told the three delegations that his Government would present a Bill to the Legislature at the opening of the session, to set up rent control in the Province.

(Bill No. 22, providing for the control of rents by the Province, was in fact introduced in the Legislature at the end of January. Under its provisions, the Quebec Government will assume control of rents as soon as the Federal Government withdraws from the field at the end of April. The Bill specifies that there shall be no change in rents now being paid, and that present leases shall remain in force until August 1 next. After that date, landlords and tenants may come to an amicable understanding or refer their grievances to a rentals board. The legislation will come into effect on a date to be proclaimed by the Lieutenant-Governor in Council, and will end on May 1, 1953.)

Labour Code

The Premier assured the CCCL delegates that his Government had never suggested a code, but only a plan, which did not commit it in any way, and that it did not intend to use force, but to pass "the best laws which will do justice to all classes of society".

The Workers' Right to Join a Union

Where there is a conflict between employers and workers, "the Government will always give the benefit of the doubt to the union," the Hon. M. Duplessis told the CCCL delegation. He added that the workers have the right to join the union of their choice, and warned employers that his Government is "completely opposed to any under-handed methods employers may take to cause prejudice to employee groups."

The Closed Shop

The Premier stated that he was against the closed shop "because it is contrary to freedom." The union should be "voluntary and not forced," he said.

Referring to the allegation contained in the CCCL brief, that certain employers' and professional corporations practically control certain trades and professions, the Premier stated that he had refused requests from four employer groups representing trades, who sought incorporation. He added that they submitted "good reasons for their groups, one being to improve the standards in their profession. However, anything that tends to limit individual liberty is dangerous."

Old Age Pensions

Speaking on old age pensions, the Premier agreed that improvements could be made, and that the Government is now studying various plans—in particular, the plan put forward by the Federal Government at the Federal-Provincial Conference in Ottawa.

Mr. Duplessis said his Government had declared previously that it is ready to pay its share of 50 per cent of old age pensions.

78060—3½

commencing at age 65, and added that all aspects of this question, such as religion, tradition, etc., should be taken into consideration. He cautioned against the danger of eliminating from active life people still capable of rendering signal service.

Immigration and Education

In reply to the suggestion contained in the Railway Brotherhoods' brief, that the Provinces should not be required to bear the entire cost of educating new citizens brought in under the Federal Government's immigration policy, the Premier asked the delegates to make it clear "elsewhere" that if immigrants are brought over in large numbers, the Provinces must be assured of sufficient revenue to enable them to take charge of their education. Ottawa is responsible for immigration, he pointed out, "but I am absolutely against intervention by Ottawa in the field of education." Mr. Duplessis again voiced his opposition to the uniformity of text-books.

Mothers' Allowances

In reply to a recommendation from the Railwaymen, Mr. Duplessis said that he was prepared to increase the pension payable to needy mothers. He remarked, however, that if all the improvements requested are to be carried out, a more equitable distribution of sources of revenue between Ottawa and the provinces is essential.

Industrial Accidents

With regard to the suggested amendments to the Workmen's Compensation Act, the Premier described the many improvements made by his Government to make the Act more generous in its application. At the same time, he pointed out that the purpose of the Act is to provide compensation, and that it is the employer who pays, whether he is responsible or not.

The Hon. Maurice Duplessis reaffirmed his opposition to the manufacture and sale of oleomargarine in the Province.

BRITAIN'S YOUTH EMPLOYMENT SERVICE

Advice and guidance in helping every boy and girl leaving school to find the right job, get the right training, and make a good adjustment "in their passage from school to the world of adult independence," is the aim of Britain's newly reorganized youth employment service.

In the field of youth employment service, Britain has more than forty years of experience to draw upon, *Labour and Industry in Britain states* in a report on the Youth Employment Service in Britain. As far back as 1909, the Labour Exchanges Act made possible the establishment of what are now known as Labour Exchanges, and in a number of these Exchanges juvenile departments were set up. Even before this date, a number of local education authorities had taken the initiative in setting up juvenile employment bureaux to give advice to juveniles and parents on the selection of suitable occupations. The Act of 1910 formally empowered these authorities to carry out this work. This dual interest of educational and labour authorities has been maintained throughout the years, and is continued under the present system which has emerged from the Employment and Training Act of 1948.

Under the Act, each local education authority has the option of operating a youth employment service in its area, subject to the scheme being approved by the Ministry of Labour. Alternatively, the Service is established and run locally by the Ministry of Labour.

A large part of the Service is operated under schemes submitted by local education authorities and approved by the Ministry of Labour.

Where once the problem was to find outlets for young people in an overstocked market, it is observed, the problem today is to make the best use, both in their own and in the national interests, of the new young workers released from school and entering employment.

Organization of the Service

The Youth Employment Service is administered centrally under the Central Youth Employment Executive, composed of officers of the Ministries of Labour and Education and the Scottish Education Department. Acting in an advisory

capacity to the Minister of Labour is the National Youth Employment Council, on which are representatives of local authorities, teachers, employers, and trade unions. On the local level, Local Youth Employment Committees advise and assist in the operation of the Service in their areas.

More than 800 Youth Employment Offices are operated locally. Each office is under the control of a Youth Employment Officer, who keeps in close and continuous touch with schools and places of employment in the area, and works in co-operation with parents, teachers, and all employers concerned with the welfare of young people.

Vocational Guidance

The Service's first function is to give vocational guidance. This is based on a knowledge of the young person, and of industry, commerce and the professions.

The starting point for vocational guidance is the school leaving report, and all schools are required to furnish the Youth Employment Officer with reports on the physical qualities, intelligence, educational attainments and special aptitudes of all pupils likely to leave school on reaching the statutory school-leaving age. These reports, usually compiled by teachers, are regarded as confidential documents for the information of Youth Employment Officers, although parents or guardians have a right to see them on application. In 1948-49, 831,762 school-leaving reports were received by Youth Employment Officers.

An important preliminary feature is starting the boy or girl thinking about his choice of a career before he leaves school, by means of school talks on industries and employment, printed information, films, visits to local plants, and in other suitable ways. Arrangements have been made for the preparation of suitable career booklets and films.

This leads up to an interview when the boy or girl is about to leave school, at which a teacher and the parents are invited to be present. Great importance is attached to the interview. In 1948-49, 767,340 school leavers were given individual advice on choice of careers.

Placing in Employment

The next function of the Service is to place the boy or girl in employment. There is no compulsion; each one is free to choose, or his parents to choose for him, the job in which he will start, even though it may not be regarded by the Youth Employment Officer as suitable.

The Youth Employment Officer does his best to ensure that the boy or girl will be fitted into the "right job"; that he will be diverted from any "blind alley" occupation, or job harmful to health or character; and that, as far as possible, the occupation is one in which national interest requires an inflow of young workers, provided always that the interests of the individual should be the first consideration.

In 1948-49, over 845,000 boys and girls under 18 were placed in employment through the Service.

Continuous Review

The third function of the Service is to keep in touch with the boys and girls after they have taken up employment. This is done by a number of means, as for instance, encouraging young workers to call on the Youth Employment Officers at certain intervals to report on their progress, and also at any time for advice on any difficulty, and by stimulating employers and trade unions to see to the well-being of young workers. Those who do not settle down in their jobs are given advice and help in finding new and more suitable employment.

One successful method has been the holding of "open evenings" at the Youth Employment Offices. In the years 1948-49, over 200,000 young workers attended these open evenings, 171,000 responded in writing to invitations, and 257,000 were followed up in other ways.

Training Opportunities

Advice on careers, help in finding the right job, and the following up of the assimilation of the new worker into the selected job, are considered to be of first importance and are regarded as the primary purposes of the Youth Employment Service.

Regarded as no less important is the provision of training facilities to enable the boy or girl to become efficient in his or her chosen craft. It was brought to the attention of the Minister of Labour that, while scholarships are available to enable boys and girls to obtain higher education with a view to entering the professions, there was no corresponding provision for a gifted boy or girl to receive financial assistance in training away from home for a skilled craft or trade.

The Ministry of Labour has now devised a scheme, known as the Special Aptitudes Scheme (L.G., July, 1950, p. 1085), to help young people who want to train for a skilled occupation in which there are good prospects, but for whom there is no opportunity of such training in their home areas.

Under the Scheme, provision is made for grants for travelling expenses, maintenance, pocket money and other allowances to enable a boy or girl, in such a case, to learn a skilled trade with an employer elsewhere than in his or her home town. Parental contributions are expected when the net income of the parents is above a certain figure. Nearly 1,300 young persons had benefited under this scheme by the end of 1949.

In general, however, the Ministry of Labour looks to industry to provide for the training of its young entrants under apprenticeship schemes or other arrangements, established by agreement between the employers and trade unions in each industry concerned.

At the date of the report, over fifty sections of industry, in consultation with the Central Youth Employment Executive, had adopted arrangements providing for the recruiting and training of young workers.

HISTADRUT, ITS ORIGINS, STRUCTURE AND FUNCTIONS

Since its founding in 1920, the General Federation of Jewish Labour in Israel has held a unique place in the life of Palestine and later Israel. With its present membership comprising about forty per cent of the Jewish population, Histadrut's trade union activities are only one phase of its many functions.

Perhaps in no other country in the world does a democratic federation of labour influence its labouring and professional classes to the degree that Histadrut, the General Federation of Jewish Labour in Israel, does today.

Some evidence of the extent of Histradrut's influence on Israeli life is found in a statement of Boris Stern[1] who has remarked "that there is hardly a phase in the economic, social and cultural life of Israel in which Histadrut . . . is not important."

Strictly trade union functions, he points out, are only a part of the Federation's activities. "Through its chains of producer and consumer co-operatives in agriculture, industry, construction, transportation, trade and finance, and through its social insurance, medical and educational institutions," Boris Stern states, "it has for years occupied a specialized place in the Jewish life of Palestine. Histadrut is the largest agricultural producer and the greatest factor in both export and import trade.

"It operates the largest building and construction agency and manufactures most of its own building materials and supplies. Its banks and insurance agencies provide saving facilities for the members and loans for its agricultural, industrial and commercial enterprises. It has established a comprehensive system of social insurance, with hospitals, dispensaries, and convalescent homes available both to city dwellers and to agricultural communes. It operates schools for children and vocational and cultural training classes for adults, giving particular emphasis to classes for adult immigrants."

This complex structure, the author explains, was a logical consequence of the problems involved in the Jewish colonization of Palestine. Colonization was accomplished only through the integration of the *Chalutzim* (immigrants) as manual and skilled workers on the land and in the cities. It also necessitated the establishment of industries and trades in which these workers could be employed. Finally, because of the varied backgrounds of the immigrants, it became necessary to establish social and cultural institutions and to adopt a common language (Hebrew).

An outline of the functions and activities of Histadrut is set down in its constitution. Briefly they are:—

(*a*) to organize workers according to their trades into respective unions;

(*b*) to establish and develop enterprises in all branches of agriculture and industry in city and village; to set up credit societies and raise funds for colonization and other economic activities; to foster the organization of collectives and labour groups; to supply workers through the Labour Exchange; to contract and execute efficiently various works; to further the establishment of labour consumers' and producers' co-operatives with the object of extensive reciprocal exchange of supplies;

[1] Monthly Labour Review, August 1950, pp. 230-3.

(*c*) to persist in conducting the struggle of hired workers for improved labour conditions until the complete liberation of the working class;

(*d*) to provide for the revival of the Hebrew language; to publish newspapers and literature on professional, technical, and general subjects; to set up cultural, educational, and technical institutions;

(*e*) to care for the organization and expansion of labour immigration; to maintain contact with the *Hechalutz;* to receive immigrants and care for their employment and organization;

(*f*) to promote comradely relations with Arab workers in Palestine and foster the link between the Jewish labour movement and the International labour movements all over the world;

(*g*) to establish and develop mutual aid institutions (sick fund, life insurance, credit societies, unemployment insurance, etc.).

Such a broad field of activities can be explained, Mr. Stern states, by the fact that from its inception, the objectives, functions and structure of Histadrut have differed radically from those of the organized labour movement in the United States and in Western Europe. The federation, whose current membership comprises about 40 per cent of the Jewish population in Israel (slightly over a million), had its origin in the early agricultural settlements and drew its strength from the co-operatives and casual labour.

(Of the country's present-day co-operative agriculture, Edward A. Norman[2] has written: "Israel is fortunate . . . especially in view of its shortage of capital, in that a bold pioneering spirit is a tradition of its development, so that many have been willing to go out upon the land to produce and build with only the most meagre equipment and supplies. Over the past 40 years a system of co-operatives, or group, farming has been developed which today is understood and practised widely throughout the country. This system, when properly applied, has enabled many energetic people to settle upon the land with much less capital investment per person than if they were to have settled family by family separately, and to maintain themselves and continually to improve their standard of living with much lower average monetary incomes than would otherwise be possible. Israel now has more than 170 of these fully co-operative settlements which together include well over fifty thousand people. . . .

("For many of the immigrants co-operative existence at first has little appeal. In fact, it seems sadly reminiscent of the atmosphere of the hated reception, displaced persons or concentration camps which most of them have experienced and want to forget. . . . Co-operative farms, however, being made up of voluntary, self-selected groups, in general . . . have a notably happy atmosphere. As immigrants become familiar with the true situation they may prove more willing to follow the co-operative way of life. . . .")

Faced with the country's lack of industries and strong competition from the lower-paid Arab workers, Histadrut was obliged to find ways and means of providing employment for the increasing flow of Jewish immigrants into Palestine. In addition to establishing industries and trades the federation also found it necessary to build clinics and hospitals, and schools for adults and children, and to create insurance systems. "The combination of trade union activity with the operation of industrial and financial enterprises and social institutions makes Histadrut unique," Mr. Stern comments.

In structure, the General Federation of Jewish Workers is not a federation of unions similar to the American Federation of Labour or the Congress of Industrial Organizations. While an individual worker can become a member of the AFL or CIO only indirectly by joining a member union, the membership in Histadrut is individual and direct. Any person 18 years old or more who works for an employer, or is self-employed and has no one working for him, can become a member.

The General Convention, which on the average meets every three years, is the highest legislative and policy-making body of Histadrut. Delegates to the convention are elected by the membership from local political party slates. They are elected by secret ballot on the principle of proportional representation and participate in conventions not primarily as representatives of the trade union to which they belong, but as representatives of all the workers in the locality from which they are elected.

Between conventions, policy-making and administrative functions are the responsibility of the council of Histadrut. Each year the council elects an executive committee of 51 members, which carries out the program adopted by the conventions or council and handles day-to-day administrative affairs. In its turn, the executive committee elects an executive bureau of nine members which in 1949 was composed of members of the three leading parties, the Israel Labour Party (Mapai, the largest party in Israel), United Workers Party (Mapam, the left-wing opposition), and the Zionist Workers.

2 "Israel After Two Years" by Edward A. Norman in *Foreign Policy Reports,* May 15, 1950.

In 1945 there were only three Jewish trade unions in Palestine organized on a national scale. In 1950, the General Federation reported 15 such unions, the most important being: agricultural workers (42,200 members), clerks and officials (24,400), metal workers (12,150), construction workers (7,300), food workers (4,300), textile workers (3,350), teachers (2,900), and engineers, architects and surveyors (1,900).

Every Federation member is required to join a union if one exists in his trade or industry. The local craft or plant unions are principally concerned with working conditions in the plants or establishments in which the members are employed. By virtue of his membership in the local union, the worker automatically acquires membership in the city or community craft or industry union, which concerns itself with collective bargaining and industrial relations problems of that craft or industry.

Finding ways and means to facilitate a continuous influx of Jewish immigrants to Israel and their absorption into the economic and social life of the new State was the primary concern of the 1949 Histadrut convention, the article discloses. Pledging itself to assist the Government in implementing the national "austerity program," the Israeli Federation at the same time resolved that it would strive to raise the real value of wages through increased industrial production and lower prices. Emphasis was also placed on increased export as the main tool in achieving Israel's economic independence.

As in the past, wages were to be determined by voluntary and free collective bargaining between employers and employees. The convention declared that Histadrut would even be willing to take the initiative in promoting the introduction of labour-saving devices and other changes in methods, including piecework and special premium rates, to encourage individual workers to greater output.

To facilitate absorption of the new immigrants into the social and economic life of Israel, the convention also adopted the following policy:—

(1) The trade unions of Histadrut will remain open organizations. Demobilized soldiers and new immigrants will be admitted to Histadrut at smaller or no membership fees for a period up to six months, or until such time when they become adjusted and can assume the full financial obligations on par with the other members of Histadrut;

(2) No overtime work will be permitted unless absolutely essential to the economic or social welfare of the country;

(3) No worker will be permitted to hold more than one job;

(4) The Government of Israel will be requested to impose a special "absorption" tax on every citizen in the country. The proceeds are to be used in the settlement and housing of immigrants and in providing for their vocational and cultural needs.

Placing itself on record as strongly opposed to compulsory arbitration, Histadrut stated that it would protect the right of unions to strike when such action becomes necessary. It also pledged itself to work for labour legislation to insure the independence and legal protection of trade unions, to provide legal standing for collective bargaining agreements, to establish minimum wages, to limit working hours, and to protect women and minors under 18.

The convention called for equal wages to women for equal work, maternity leave with full pay, prohibition of child labour, abolition of night work and protection of the workers' health at his place of employment. It further declared that it would promote legislation providing a comprehensive social insurance system to protect workers against unemployment, accidents and sickness, and old age.

Of the leadership of Histadrut, Mr. Pat Conroy, secretary of the Canadian Congress of Labour, who visited Israel in 1949, has said: "The philosophy of the labour leaders in Israel stems from a profound and acute sense of responsibility for the future welfare of the people." The aim of the Histadrut leadership, he continued, "is to produce a society which will be a good example for the rest of the world to follow. It must be helped to achieve its aim, so far as we are able to provide such assistance, because the implications of the success or the failure of the Israeli experiment are very important. In an immediate sense, what happens in Israel will have a bearing on the whole Middle East. In this region, the plight of the masses of the peoples is generally miserable. The results of improving the living standards in Israel, and of developing a better way of living for the majority of the people, will flow over the borders of Israel into the other countries of the Middle East, and is bound to have a beneficial effect within a comparatively short time."[3]

Israel became the sixtieth member of the International Labour Organization and delegates of Histadrut participated in the Conferences of the ILO at Geneva in June 1949 and June 1950.

Contemporary literature on the history of Histadrut as well as its relationship to life in Palestine and Israel may be found

[3] "Israel—An Experiment in Organizing a New Society" in *The Canadian Unionist*, February, 1950.

in books such as: *Palestine, Problem And Promise,* by Robert Roy Nathan, Oscar Gass, and Daniel Creamer (1946); *Co-operative Palestine, the Story of Histadrut,* by Samuel Kurland (1947); and *Labour Enterprise in Palestine,* by Gerhard Muenzer (1947). In Israel the Histadrut daily newspaper, *Davar,* reaches many thousands of interested readers. It has the largest circulation of newspapers in the country. In United States the American Trade Union Council of the National Committee for Labour Israel publishes *Histadrut News* which aims to keep American readers up to date on Israel's unique labour federation.

ILO TEXTILES COMMITTEE STUDIES WAGE DISPARITIES AND SAFETY OF WORKERS

Measures to approve the productivity of textile workers and of the textile industry in underdeveloped countries were recommended by the ILO Textiles Committee, which met last December at Lyons, France. Preparation of a model safety code for the industry was requested.

The Textiles Committee of the International Labour Organization held its Third Session at Lyons, France, from November 28 to December 8, 1950, in the Palais de la Bourse and adopted a series of reports and resolutions concerning problems of the textile industry as they affect workers and employers in North and South America, Europe and Asia. The Committee is one of eight tripartite Industrial Committees created for the purpose of giving consideration to the particular and practical problems of the industries concerned. The Committee is responsible to the Governing Body of the ILO.

Organization of the Committee

The Third Session was attended by 141 delegates, advisers, observers, and representatives of other international organizations. Of the twenty-two countries belonging to the Textiles Committee only two failed to send representatives to the Session.

The following twenty countries were represented by tripartite delegations: Argentina, Australia, Belgium, Brazil, Canada, Denmark, Egypt, Finland, France, India, Italy, Mexico, Norway, Netherlands, Peru, Poland, Sweden, Switzerland, United Kingdom and United States. These 20 countries were represented by 108 delegates and 33 advisers, a total of 141 persons. Tripartite delegations of observers from the German Federal Republic and Japan were also present. Observers from the following international non-governmental organizations also attended the session; the International Federation of Textile Workers' Associations; the International Federation of Christian Textile Workers' Trade Unions; the International Confederation of Free Trade Unions; and the International Federation of Christian Unions of Employees, Technicians and Supervisory Staff.

The Canadian delegation was composed as follows:—

Government delegates.—F. Raoul Trépanier, Industrial Relations Officer, Federal Department of Labour, Montreal; H. C. Hudson, Chief, Special Placements Division, Unemployment Insurance Commission, Ottawa, Ont.

Employers' delegates.—H. F. Irwin, Director of Industrial Relations, Primary Textiles Institute, Toronto, Ont.; L. A. Lyons, Personnel Manager, the Montreal Cottons Ltd., Valleyfield, Que.

Workers' delegates.—Rene Gosselin, Secretary General of the National Catholic Textile Federation affiliated to the Canadian and Catholic Confederation of Labour, Granby, Comté de Shefford, P.Q.; L. Tessier, Director of the Greater Cornwall Textile Joint Board of the Textile Workers Union of America, Cornwall, Ont.

Mr. Henry Hauck, representative of the Government of France, presided over the session. The other representatives of the Governing Body present were: Mr. P. Waline (France) for the Employers' group, with Mr. G. Bergenstrom (Sweden) as his substitute; and Mr. A. Roberts (United Kingdom) for the Workers' group. The Committee elected two vice-chairmen: Mr.

Tata (India) for the Employers and Mr. Lovett (Peru) for the Workers. The groups elected their chairmen as follows: Government group: Mr. Ricard (Denmark); Employers' group: Mr. Tata (India); Workers' group: Mr. Robertson (United Kingdom).

Agenda

The agenda for the Third Session included the following three points:—

1. The general report, dealing with (*a*) action taken in the various countries in the light of the conclusions of the Second Session; (*b*) steps taken by the Office to follow up the studies and enquiries proposed by the Committee; and (*c*) recent events and developments in the industry.

2. Disparities in textile wages between the various countries, and the effect of these disparities on the standards of life of textile workers.

3. Safety of workers in the textile industry.

The Office had prepared a report on each of these points.

Procedure

In plenary sitting the Committee discussed the general report and two special studies, one on post-war development in the Japanese textile industry and the other on the prospects and problems of the textile industry in Western Germany. The Committee set up a Steering Committee, a sub-committee on the Safety of Workers and a Sub-committee on Disparities in Textile Wages.

Safety of Workers

The Sub-committee on the Safety of Workers elected Mr. Schwartz (Government member, United States) as chairman, Mr. Irwin (Employers' member, Canada) and Mr. Dawant (Workers' member, Belgium) as vice-chairmen, and Mr. Malfait (Government member, Belgium) as reporter.

The conclusions reached by the Sub-committee were embodied in a report, a resolution concerning a model safety code applicable to the textile industry, and a resolution concerning safety organization in textile factories. The latter resolution was adopted by 93 votes to three.

Model Safety Code Applicable to the Textile Industry.—In the resolution on this subject, the Committee invited the Governing Body of the ILO to take action in various ways, including the following:—

1. to establish a small committee of experts on safety in the textile industry and to consider convening this committee at an early date;

2. to instruct the Office, in collaboration with this committee of experts (*a*) to study the proposals made by the experts who had already been consulted by the Office with a view to preparing the report on safety in the textile industry; (*b*) to examine the suggestions made at the Third Session of the Textiles Committee with respect to special safety provisions for the various branches of the textile industry; (*c*) to prepare a set of supplementary safety provisions for the textile industry, for inclusion in the Model Code of Safety Regulations for Industrial Establishments, either as a special supplement or in some other convenient form;

3. to instruct the Office to submit to the members of the Correspondence Committee on Accident Prevention the suggestions for modification of, or addition to, some of the general provisions of the Model Code of Safety Regulations for Industrial Establishments, which had been made during the Third Session of the Textiles Committee.

Safety Organization in Textile Factories.—In the resolution on this subject the Committee invited the Governing Body to request Members of the ILO to—

1. suggest to the various sections of the textile industry the establishment in each factory of safety committees composed of representatives of managements and workers (or the appointment of safety officers by managements);

2. report to the Office the number of textile factories in their countries, the number of these factories having safety committees or safety officers, and the part played by such committees or officers in accident prevention.

Disparities in Textile Wages

The Sub-committee on Disparities in Textile Wages elected Mr. Carruthers (Government member, United Kingdom) as its chairman and reporter, and Mr. Vandeventer (Employers' member, France) and Mr. Heywood (Workers' member, United Kingdom) as vice-chairman. The conclusions reached by the Sub-committee were embodied in a report, which the Committee unanimously adopted, and a memorandum which was adopted by 87 votes to nil with six abstentions.

The memorandum on "disparities in textile wages between the various countries and the effects of these disparities on the standards of life of textile workers" dealt in particular with the following matters:—

1. ***Improvement in comparability of national statistics of textile wages.***—On this subject, the memorandum recommends ratification and application of the Convention concerning statistics of wages and hours of work (No. 63), adopted by the International Labour Conference in 1938.

It is further suggested that in measuring and comparing textile wages and the standards of life of the workers, it is essential to take social charges and services adequately into account.

2. ***International comparison of real wages of textile workers.***—The Committee expressed the hope that the Governing Body would take steps to facilitate such comparison, and more particularly that it would—

(*a*) instruct the Office to press forward, through the Committee of Statistical Experts and the International Conference of Labour Statisticians, with its work on international comparison of costs of living and real wages, having special regard to the problems of such comparisons as they apply to textile workers; and

(*b*) indicate to the various countries its willingness to authorize the Office, under its expanded technical assistance program, to send teams of experts, at the request of the Governments concerned, to study on the spot the conditions of life and standards of living of textile workers.

3. ***Action to raise and protect the living standards of textile workers.***—The memorandum refers to the need for positive action to raise the living standards of textile workers in under-developed countries, and to safeguard and improve such standards in the economically more advanced countries; in each case where such action is planned, the memorandum states it will be necessary to take into account such factors as the productivity of the section of the industry concerned, employment possibilities in the textile industry and alternative occupations, the rate of development of textile industries in the various countries, the balance of payments position in the country concerned, and the interests of consumers.

The memorandum also points out that substantial and continuing increases in the wages of textile workers must depend on the progressive improvement of the productivity of labour in the whole economy.

As regards the economically less developed countries, such action should include also measures to raise—

(*a*) the productivity of textile workers by the use of more modern capital equipment, better lay-out and organization of factories, improved methods of work and the adoption, where appropriate, of incentive payment systems arrived at by collective or mutual agreement; and

(*b*) social standards, including the encouragement of collective bargaining, the fixing of minimum wages and the establishment of appropriate systems of social security.

Furthermore, full advantage should be taken of the technical assistance which the United Nations, the International Labour Organization and other international organizations are prepared to give to Governments at their request.

High-wage countries are recommended to prepare carefully for possible changes in the world distribution of the industry, owing to its expansion in the hitherto economically under-developed countries where cheap labour is available. It is also considered desirable that each textile-producing country should keep the International Labour Office informed of developments in investment, reinvestment and production in its textile industries, and that the information thus collected should be periodically reviewed by the Textiles Committee.

Other Resolutions

Inspection of Safety Measures in the Textile Industry.—This resolution, which the Committee adopted unanimously, requests the Governing Body to consider the desirability of transmitting to States Members of the ILO, which have not yet technical factory inspection services, the Committee's hope that these States will appoint inspectors specialized in safety and hygiene matters, both in industry as a whole and, more particularly, in the textile industry.

Raw Materials in the Textile Industry.—This resolution, which was adopted by 87 votes to nil with three abstentions, invites the Governing Body to transmit to the Governments of countries producing raw materials for the textile industry, and to the competent international bodies, the Committee's desire that these countries should pay regard to the necessity for providing the various branches of the industry in each country with adequate supplies at equitable prices.

Agenda for the Fourth Session of the Committee.—This resolution, which was adopted by 80 votes to three with six abstentions, invites the Governing Body to instruct the Office to make studies on the following subjects with a view to the inclusion of some of them in the agenda of the Fourth Session of the Textiles Committee:—

1. Labour-management co-operation in the textile industry.

2. Special problems affecting the employment of women in the textile industry.

3. Holidays with pay in the textile industry.

4. A guaranteed wage for workers in the textile industry.

General Comments

The Canadian delegates, in addition to active participation in the work of their respective Sub-committees, spoke at the plenary sessions of the Committee. Mr. H. F. Irwin, Employers' delegate, outlined the importance of the textile industry in the industrial life of Canada providing much detailed information regarding production, wages, and working conditions. Mr. H. C. Hudson, Government delegate, spoke on the question of recruiting new workers for the industry with particular reference to the opportunities which it provides for the employment of the physically handicapped. Mr. Rene Gosselin, Workers' delegate, explained the trade union organization of textile workers in the Province of Quebec.

Several of the delegates speaking at the Plenary Sessions deviated widely from the Agenda of the Conference, inasmuch as they seized on the opportunity to provide either a considerable amount of detail on the textile industry in their respective countries or utilized the forum as a means of expressing opinions on contrasting political policies. The Chairman, Mr. Hauck, was very lenient and handled all the sessions with tact, diplomacy and firmness.

It was the consensus of opinion among the delegates that the Third Session of the Textiles Committee fully served the purpose for whcih it was called, namely, to provide the opportunity of an exchange of views on specific improvements in safety measures in the industry and the exploration of disparities in rates of textile wages.

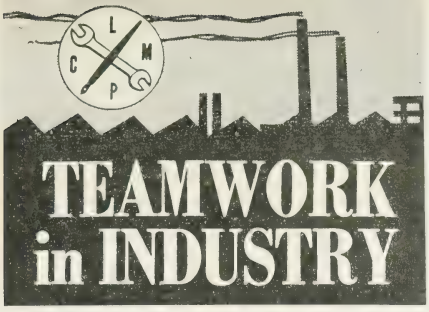
(Concluded from page 314)

Accurate overall information on the extent to which individual firms with defence contracts have already taken on more workers to meet their expanded programs is not yet available, but, based on the employment forecast survey of the Department of Labour and other data, it is estimated that employment on various types of defence activities today may be as high as 100,000. As the Minister of Labour indicated on January 30, this total may reach 200,000 by the end of 1951.

It was important in estimating the extent of these labour requirements to keep in mind the possibility that shortages of essential materials would likely reduce employment in non-defence industries and might limit expansion in plants producing defence equipment and supplies.

Third, besides the usual increase in employment every spring and the growing impact of the defence program based on contracts already awarded, the probable further increases in both defence expenditures and in the manpower requirements of the Armed Services must be kept in mind. In this case, there was necessarily more uncertainty surrounding an assessment of the resulting increased manpower requirements. It was expected, however as stated a few days before in the House of Commons by the Minister of Trade and Commerce that defence contracts awarded during the first quarter of 1951 would exceed those in the last quarter of 1950.

There were five main groups from which the additional workers needed could be drawn. These were: (1) The normal seasonal increase in the labour force, plus the seasonally unemployed; (2) Natural increase; (3) Immigration; (4) Reserves of manpower; and (5) Transfers from non-essential to essential activities.



In the first classification, there was always a large group of workers in Canada employed only in the summer months. This group, composed mainly of students, housewives and retired persons, had numbered during recent years about 350,000.

The natural increase in the labour force amounted to about 70,000 workers annually and the labour force could be expected to increase by this amount during the coming 12 months.

Plans had been laid to bring about 150,000 immigrants to Canada during 1951, of whom close to one-half may be workers. Allowances must be made on the other hand for annual emigration which has amounted to between 20,000 and 30,000 during recent years, mostly to the United States.

The transfer of workers from non-essential to essential production was another important potential source of labour for defence production. To the extent that employment was curtailed in non-essential industries due to shortages of materials, such transfers would of course be automatically encouraged.

Finally, reference should be made to the importance at this time of improving the quality as well as increasing the quantity of our working force. Many of the needs of the expanding defence production program would be for key skilled and technical personnel. These people were not plentiful even though many Canadians acquired valuable skills and experience in defence production during World War II. Their number could be increased, however, through on-the-job and other types of training programs.

Letting Workers See Use of Products

To let employees see the end uses of two of their company's specialty paper products, a sub-committee of the Mutual Interest Board (a Labour-Management Production Committee) at Alliance Paper Mills Ltd., Merritton, Ont., recently sponsored a tour through two customer plants. The tour was the second in the sub-committee's educational program.

The workers saw, at the E.S. & A. Robinson plant, Leaside, Ont., the end uses of Alliance glassines and, at the Acme Carbon and Ribbon Company, Toronto, the processing of Alliance's carbonizing sheet. The tour enabled employees to make notes of defects and complaints so that, armed with this knowledge gained from a first-hand inspection, they can take steps to prevent recurrences.

Labour representatives on the Mutual Interest Board are elected annually by Local 77, International Brotherhood of Pulp, Sulphite and Paper Mill Workers (AFL-TLC).

Educational Library

A suggestion by a member of the Labour-Management Co-operation Committee at the Ideal Brass & Plating Co. Ltd., Winnipeg, has resulted in the setting-up of an educational library for the employees there. The committee, which supervises the library, has appointed two workers as librarians. So far, the company has financed the purchase of all books in the library but the union in the plant, Metal Trades Local No. 2, One Big Union, is planning to buy some volumes.

All books and periodicals in the library, except a handbook used for reference purposes, may be borrowed by employees for a three-day period. The books all deal with metal finishing, plating, machinery and machine tools.

This committee, in the words of the president of the local union, "is a great boost to the morale of the employees; it gives them a greater feeling of belonging to a good company."

News of Production Committees

To make an on-the-spot investigation of production problems discussed at their meetings as well as to see for themselves the innovations and improvements, members of the LMPC at Burns & Co. Limited, Edmonton, recently toured the company's new plant. In each section of the plant visited, a member of the department explained the operations in progress and pointed out the improvements included in the new building.

* * *

Two Ontario LMPCs recently sponsored social-safety evenings, which offered on their programs a period of safety instruction followed by entertainment. Approximately 100 employees of Whyte Packing Company Limited, Stratford, attended the event sponsored by their plant's LMPC and close to 50 employees were present at the one held under the auspices of the LMPC at Brantford Oven & Rack Co. Limited, Brantford.

The unions participating in these committees are Local 271, United Packinghouse Workers' of America (CIO-CCL), at Stratford, and Local 397, United Automobile, Aircraft and Agricultural Implement Workers of America (CIO-CCL), at Brantford.

New Interest in LMPCs in U.S.A.

Encouragement of the establishment of LMPCs in the United States was given on an extensive scale, during the war, by War Production Drive headquarters; but, unlike this country, it was not continued after cessation of hostilities. The projected resumption of activities in this field across the border is believed to be related to a survey of the organization and operations of our Labour-Management Co-operation Service recently made in Ottawa, Montreal, Toronto and Windsor, by representatives of the Bureau of Employment Security, U.S. Department of Labour, and of the National Security Resources Board.

Establishment of Labour-Management Production Committees (LMPCs) is encouraged and assisted by the Labour-Management Co-operation Service, Industrial Relations Branch, Department of Labour. In addition, to field representatives located in key industrial centres, who are available to help both managements and trade unions set up LMPCs, the Service provides publicity aids in the form of booklets, films and posters.

Industrial Relations and Conciliation

Reports were received in January and early February from four Conciliation Boards which dealt with important industrial disputes. Three disputes which had earlier been referred to Conciliation officers were reported as settled.

Introduction

During January and the early part of February, the Minister of Labour received reports from Conciliation Boards which had been appointed to deal with four important industrial disputes.

Two of the Boards dealt with disputes between the Canadian Press and the American Newspaper Guild and between Press News Limited and the American Newspaper Guild, and had as their Chairman His Honour Judge A. Cochrane, Brampton, Ontario.

The other members of the Boards were Gordon R. Munnoch, K.C., and Herbert Orliffe, both of Toronto, the Companies' and Union's nominee respectively. The Boards reported that they were unable to effect a settlement of any of the matters in dispute. Considerable interest was attached to the majority reports, signed by the Chairman and the employees' nominee, which criticized the Companies for their unyielding and uncompromising attitude during the negotiations. Complete texts of the majority and minority reports will be printed in the April issue of the GAZETTE..

Conciliation proceedings of 13 months duration were concluded early in February with the receipt of the report of the Board which dealt with the dispute between Canadian Pacific Air Lines Limited and the Canadian Air Line Pilots Association. The majority report of the Board, signed by the Chairman, J. E. Eades, and the Company's nominee, J. G. Gould, both of Vancouver, recommended increases of approximately 7½ per cent for Captains on domestic service routes and increases of varying amounts for First Officers and Second Officers. A schedule of rates for the newly established Trans Pacific Service of the Company was also recommended. The minority report, signed by the Association's nominee, Ian Cameron, also of Vancouver, recommended salary schedules equivalent to those paid by the Trans Canada Air Lines. The texts of the reports will appear in the April issue of the GAZETTE.

Conciliation proceedings are also under way in a dispute between Trans Canada Air Lines and the Canadian Air Line Pilots Association, with the assistance of a Conciliation Officer of the Department of Labour.

A unanimous report was received in January by the Minister from the Conciliation Board which dealt with a dispute between Eldorado Mining and Refining (1944) Limited, Port Hope, Ontario, a Federal Crown Company, and Local No. 13173, District 50, United Mine Workers of America. The Board recommended a general wage increase of 9 cents per hour and differentials of 6 cents per hour and 8 cents per hour for afternoon and midnight shifts and, when these shifts fall on Saturday or Sunday, differentials of 8 cents per hour and 10 cents per hour. The text of the Board's report will be found elsewhere in this issue.

During January, the Minister was advised of the settlement of three industrial disputes which had earlier been referred to Conciliation Officers. These involved (1) the Yukon Consolidated Gold Corporation Limited, Dawson, Y.T., and Dawson Miners' Union (Local No. 564, International Union of Mine, Mill and Smelter Workers), with a settlement based on a general wage increase of 5 cents per hour, increases in bonuses payable to married men maintaining residences in the district, decreases in board rates, and additional paid statutory holidays; (2) Smith Transport Limited, Montreal, and Local No. 106, Transport Drivers, Warehousemen and Helpers' Union, with a settlement based on a general wage increase of 5 cents per hour and other improvements in working conditions;

This section covers proceedings under two federal statutes, the Industrial Relations and Disputes Investigation Act and the Conciliation and Labour Act, involving the administrative services of the Minister of Labour, the Canada Labour Relations Board and the Industrial Relations Branch of the Department.

(3) Robin Hood Flour Mills Limited, Saskatoon, and Local No. 342, United Packinghouse Workers of America, with a settlement based on a general wage increase of 6 cents per hour, increased vacations with pay, and a cost-of-living bonus.

The February issue of the GAZETTE carried a detailed report of the Reasons for Judgment, issued by the Canada Labour Relations Board at its December sittings, in which the Board revoked the certification granted on November 20, 1947, to the Canadian Seamen's Union as the bargaining agent of a unit of unlicensed employees of Branch Lines Limited, Sorel, P.Q. During January, the Board received from Shell Canadian Tankers Limited, Toronto, an application for the revocation of the decision of October 24, 1946, certifying the Canadian Seamen's Union as the bargaining agent of unlicensed employees of the Company. The applicant contended that the Canadian Seamen's Union was not a trade union within the meaning of the Industrial Relations and Disputes Investigation Act. Early in February, applications for the revocation of decisions certifying the Canadian Seamen's Union as bargaining agent were made, on similar grounds, by S.S. Texaco Brave, Limited; S.S. Texaco Chief, Limited; and S.S. Texaco Warrior, Limited.

The following statement concerns the scope and administration of the Industrial Relations and Disputes Investigation Act and the Conciliation and Labour Act.

Conciliation services under the Industrial Relations and Disputes Investigation Act and under the Conciliation and Labour Act are provided by the Minister of Labour through the Industrial Relations Branch. The Branch also acts as the administrative arm of the Canada Labour Relations Board under the former Act.

The Industrial Relations and Disputes Investigation Act came into force on September 1, 1948. It revoked the Wartime Labour Relations Regulations, P.C. 1003, which became effective in March, 1944, and repealed the Industrial Disputes Investigation Act, which had been in force from 1907 until succeeded by the Wartime Regulations in 1944.

Proceedings begun under the Wartime Regulations are continued in so far as the services involved in such proceedings are authorized under the new Act. Likewise, decisions, orders and certifications given by the Minister of Labour and the Wartime Labour Relations Board are continued in force and effect by the new Act.

The Act applies to industries within Dominion jurisdiction, i.e., navigation, shipping, interprovincial railways, canals, telegraphs, interprovincial and international steamship lines and ferries, aerodromes and air transportation, radio broadcasting stations and works declared by Parliament to be for the general advantage of Canada or two or more of its provinces. Additionally, the Act provides that provincial authorities, if they so desire, may enact similar legislation for application to industries within provincial jurisdiction and make mutually satisfactory arrangements with the Dominion Government for the administration of such legislation.

The Minister of Labour is charged with the administration of the Act and is directly responsible for the appointment of Conciliation Officers, Conciliation Boards, Industrial Inquiry Commissions for the consideration of complaints that the Act has been violated or that a party has failed to bargain collectively, and of applications for consent to prosecute.

The Canada Labour Relations Board is established under the Act as successor to the Wartime Labour Relations Board to administer provisions concerning the certification of bargaining agents, the writing of provisions—for incorporation into collective agreements—fixing a procedure for the final settlement of disputes concerning the meaning or violation of such agreements and the investigation of complaints referred to it by the Minister that a party has failed to bargain collectively and to make every reasonable effort to conclude a collective agreement.

Copies of the Industrial Relations and Disputes Investigation Act and the Rules of Procedure of the Canada Labour Relations Board are available upon request to the Department of Labour, Ottawa.

Conciliation services are also provided by the Industrial Relations Branch under the provisions of the Conciliation and Labour Act. This statute empowers the Minister of Labour to inquire into the causes and circumstances of a dispute, to take such steps as seem expedient for the purpose of bringing the parties together, and to appoint a conciliator or arbitrator when requested by the parties concerned.

Proceedings under the Industrial Relations and Disputes Investigation Act are reported below under two headings: (1) Certification and other Proceedings before the Canada Labour Relations Board, and (2) Conciliation and other Proceedings before the Minister of Labour. From time to time, as required, a third article under this section will cover Conciliation Proceedings under the Conciliation and Labour Act.

Industrial Relations Officers of the Department of Labour are stationed at Vancouver, Winnipeg, Toronto, Ottawa, Montreal, Fredericton and St. John's, Newfoundland. The territory of two officers resident in Vancouver comprises British Columbia and Alberta; two officers stationed in Winnipeg cover the provinces of Saskatchewan and Manitoba and Northwestern Ontario; three officers resident in Toronto confine their activities to Ontario; two officers in Montreal are assigned to the province of Quebec, and two officers resident in Fredericton and St. John's represent the Department in the Maritime Provinces and Newfoundland. The headquarters of the Industrial Relations Branch and the Director of Industrial Relations and staff are situated in Ottawa.

Certification and Other Proceedings Before the Canada Labour Relations Board

The Canada Labour Relations Board met for two days during the month of January. The Board issued four certificates designating bargaining agents, rejected one application for certification, and ordered one representation vote. During the month the Board received three applications for certification and one application for revocation of certification.

Applications for Certification Granted

1. The Canadian Air Line Flight Attendants' Association, on behalf of a unit of employees of Canadian Pacific Air Lines Limited, comprising stewardesses and other classifications of employees who may perform similar functions, excluding the chief stewardess and the stewardesses employed at Hong Kong and Tokyo (L.G., Dec., 1950, p. 2051).

2. The Canadian Merchant Service Guild, Inc., on behalf of a unit of deck officers, excluding masters, employed by Westward Shipping Ltd., Vancouver, on the m.v. *Standard Service* and m.v. *B.C. Standard* (L.G., Jan., 1951, p. 55).

3. Malt and Grain Process Workers' Local Union No. 105 of the International Union of United Brewery, Flour, Cereal, Soft Drink and Distillery Workers of America, on behalf of a unit of employees of the McCabe Grain Company, Limited, Winnipeg, employed at its Seed Cleaning Plant, Plinquet Street and Dawson Road, St. Boniface, Man. (L.G., Jan., 1951, p. 55).

4. Local 298, Building Service Employees International Union, on behalf of a unit of employees of the Canadian Pacific Railway Company employed at its Commercial Building located at 204 Hospital Street, Montreal (L.G., Feb., 1951, p. 190).

Application for Certification Rejected

The Canadian Merchant Service Guild, Inc., applicant, and the Saint John Tug Boat Co., Limited, Saint John, N.B., respondent (L.G., Jan., 1951, p. 55). The application was rejected for the reason that the masters affected are not considered to be "employees" within the meaning of the Industrial Relations and Disputes Investigation Act.

Representation Vote Ordered

The International Union, United Automobile, Aircraft and Agricultural Implement Workers of America, applicant, and the British Overseas Airways Corporation (Engineering and Stores Groups, No. 4 Hangar, Montreal Airport, Dorval, P.Q.), respondent (L.G., Jan., 1951, p. 55). The Board ordered the vote following an investigation and a public hearing of the parties concerned.

Applications for Certification Received

1. The Canadian Communications Association, on behalf of a unit of clerical employees of the Canadian Overseas Telecommunication Corporation, Montreal (Investigating Officer: C. E. Poirier).

2. Local No. 526, Hotel and Restaurant Employees and Bartenders' International Union, on behalf of a unit of restaurant employees of the Canadian Pacific Railway Company employed at Windsor Station, Montreal (Investigating Officer: C. E. Poirier).

3. Local 12901, District 50, United Mine Workers of America, on behalf of a unit of employees of Polymer Corporation Limited, Sarnia, Ont., employed in its styrene plant (Investigating Officer: R. L. O'Neill).

Application for Revocation of Certification Received

On January 5, the Board received from Shell Canadian Tankers Limited, Toronto, an application for the revocation of the decision of October 24, 1946, certifying the Canadian Seamen's Union as the bargaining agent of unlicensed employees of the Company.

Conciliation and Other Proceedings Before the Minister of Labour

During the month of January the Minister appointed Conciliation Officers to deal with disputes between the following parties:—

1. Division No. 591, Amalgamated Association of Street, Electric Railway and Motor Coach Employees of America, and the Gatineau Bus Company, Limited, Hull, P.Q. (Conciliation Officer: R. Trépanier).

2. The Canadian Brotherhood of Railway Employees and Other Transport Workers and DeLuxe Transportation Limited, North Bay, Ont. (Conciliation Officer: R. H. Hooper).

Settlements Effected by Conciliation Officers

1. On January 12, the Minister received a report from Liguori Pepin, Conciliation Officer, indicating the settlement of matters in dispute between the Transport Drivers, Warehousemen and Helpers' Union (Local No. 106, International Brotherhood of Teamsters, Chauffeurs, Warehousemen and Helpers of America), and Smith Transport Limited, Montreal (L.G., Feb., 1951, p. 192).

2. On January 30 the Minister received a report from G. R. Currie, Conciliation Officer, indicating the settlement of matters in dispute between Dawson Miners' Union (Local No. 564, International Union of Mine, Mill and Smelter Workers) and the Yukon Consolidated Gold Corporation Ltd., Dawson, Y.T. (L.G., Feb., 1951, p. 192).

3. On January 22 the Minister received a report from R. H. Hooper, Conciliation Officer, indicating the settlement of matters in dispute between Local No. 342, United Packinghouse Workers of America, and Robin Hood Flour Mills Limited, Saskatoon (L.G., Feb., 1951, p. 193).

Conciliation Board Fully Constituted

The Board of Conciliation and Investigation appointed by the Minister on December 15, 1950, to deal with matters in dispute between the Canadian Navigators' Federation and the Prescott and Ogdensburg Ferry Company, Limited, Prescott, Ont. (L.G., Feb., 1951, p. 193), was fully constituted on January 19 with the appointment of His Honour Judge W. F. Schwenger, Hamilton, Ont., as Chairman. Judge Schwenger was appointed by the Minister in the absence of a joint recommendation from the other two members of the Board, Messrs. Norman L. Matthews, K.C., Toronto, and G. M. Desaulniers, Montreal, who had previously been appointed on the nominations of the company and union respectively.

Conciliation Board Reports Received

1. On January 24 the Minister received the unanimous report of the Board of Conciliation and Investigation appointed to deal with matters in dispute between the Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees and the Railway Express Agency, Inc., New York, N.Y. (L.G., Sept., 1950, p. 1556). The text of the report is reproduced below.

2. On January 30 the Minister received the unanimous report of the Board of Conciliation and Investigation appointed to deal with matters in dispute between Local No. 13173, District 50, United Mine Workers of America, and Eldorado Mining and Refining (1944) Limited, Port Hope, Ont. (L.G., Feb., 1951, p. 193). The text of the report is reproduced below.

REPORT OF BOARD in dispute between

Railway Express Agency, Inc., New York, N.Y.,
and
Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees.

On January 24, 1951, the Minister of Labour received the report of the Board of Conciliation and Investigation appointed to deal with a dispute between the Railway Express Agency, Inc., New York, N.Y., and the Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees (L.G., Sept., 1950, p. 1556).

The Board was composed of the Hon. Mr. Justice Edouard Tellier, Montreal, Chairman; T. P. Slattery, K.C., and Claude Jodoin, both of Montreal, members appointed on the nominations of the employer and union, respectively. Mr. Jodoin replaced Mr. Marcel Francq who had earlier been appointed to the Board on the nomination of the union but who resigned in October 1950 because of other commitments.

The text of the Board's report is reproduced herewith.

To the
Hon. the Minister of Labour,
Ottawa.

The Board was originally composed of the Hon. Mr. Justice Edouard Tellier as Chairman, and Mr. T. P. Slattery, K.C., member recommended by the Employer, and Mr. Marcel Francq, member recommended by the Bargaining Agent, and later reconstituted following the resignation of Mr. Marcel Francq by the same persons except Mr. Marcel Francq who was replaced by Mr. Claude Jodoin.

And have the honour to make the following unanimous report:—

The Dispute

The dispute arose out of negotiations for a new contract between the Railway Express Agency, Inc. (Canadian Employees), New York, N.Y., and Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees.

Brief Review of Facts

The relations between the parties or their predecessors cover a period going back to the year 1922. On numerous occasions since then many agreements and changes have been made between the parties. The last agreement was signed the 16th August, 1948 by which new working conditions and wage rates were established and the duration of the contract was limited to one year, subject to a notice of thirty days from one party to the other if one desired a revision of the contract.

Under these terms the Bargaining Agent notified the Employer on the 24th of June, 1949 that it wished to revise the agreement. This notice read as follows:—

June 24, 1949.

Mr. A. M. Hartung,
Vice-President,
Railway Express Agency, Inc.,
230 Park Avenue,
New York 17, N.Y.

Dear Sir:

Please accept this as a notice, pursuant to the provisions of the Industrial Relations and Disputes Investigation Act, paragraph 13, and the agreement between the Agency and the Brotherhood, dated August 16, 1948, of desire to revise and supplement said agreement and other agreements establishing hours of work, etc., for employees in Canada:

It is hereby proposed that there will be made effective to the Agency's employees in Canada the terms and provisions of the agreement signed at New York, N.Y., on May 26, 1949, by and between Railway Express Agency, Inc., and its employees in the United States represented by the Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees.

Kindly acknowledge and advise as to a date prior to July 24, on which it will be agreeable to meet with the Brotherhood's representatives for discussion of the matter.

Yours very truly,

(Signed) F. H. Hall,
Vice-President.

The discussions did not lead to any agreement between the parties. At the request of the Bargaining Agent, the Hon. the Minister of Labour designated the conciliator according to law, and following the lack of success of the latter, the present Board of Conciliation was constituted.

Considerations of the Board

As it appears from the lengthy memoranda and exhibits produced by the parties, the Bargaining Agent claimed for its members an increase in the wage rates of seven (7) cents an hour and a working week of forty (40) hours.

In expressing its demands, the Bargaining Agent argued that any increase in wages of the Canadian employees of the Employer ought to be, since it is an American company, the same as any increase granted in the United States for their employees in the United States. It appears clearly from the record, however, that this state of affairs has never existed in the agreements arrived at between the parties.

The position taken by the Employer in the actual dispute was to the effect that it is prepared to pay and grant to its employees wages and working conditions comparable to those granted to Canadian employees fulfilling the same duties and functions in similar Canadian companies.

It was admitted and established at the last sitting of the Board that the employees of a similar category working for similar Canadian employers have recently received an increase of seven (7) cents an hour in their wage rates and are to be granted a working week of forty (40) hours following the recommendations and conclusions set out in the report of the Hon. Mr. Justice Kellock, the Arbitrator named in virtue of the statute of 1950 "In the matter of the Maintenance of Railway Operation Act".

Findings

Considering the demands made by the Bargaining Agent and considering the stand taken by the Employer, this Board now unanimously recommends:—

(*a*) That an increase of seven (7) cents per hour be granted to employees in Canada of the Railway Express Agency, Inc. as from the 1st September 1950; and

(*b*) That a five-day forty-hour week be made effective June 1, 1951, provided that from the said date up to and including August 31, 1951, straight time only shall be payable up to forty-eight (48) hours per week.

Respectfully submitted.

(Sgd.) Edouard Tellier.
(Sgd.) T. P. Slattery.
(Sgd.) Claude Jodoin.

Montreal, January 22, 1951.

REPORT OF BOARD in dispute between

Eldorado Mining and Refining (1944) Limited, Port Hope, Ontario,
and
Local 13173, District 50, United Mine Workers of America.

To the
Hon. Mr. MILTON F. GREGG, V.C., K.C.,
Minister of Labour for the
Dominion of Canada.

Sir:

As Chairman of the conciliation board herein, I beg to report as follows:—

Meetings of the conciliation board herein were duly convened at the City of Toronto and representations on behalf of both employer and employees have been fully heard and considered.

There has been, heretofore, in effect, a written collective bargaining agreement between the parties which has expired on the 31st day of July, 1950. The parties have been unable to agree on a renewal of this agreement, and after negotiations between them and with the assistance of a conciliation officer, were still apart on five items, as follows:—

1. Wages,
2. Off-shift differential,
3. Differential for employees whose normal schedule involves working Saturdays and Sundays,
4. Union security,
5. Two-year contract.

Upon hearing before this board, it was stated and the parties agreed, that the last two items of union security and a two-year contract could and would be determined amicably by the parties, and consequently, no further reference to these items appears in this report.

I regret to report that after representations had been made, that your board was unable to accomplish an agreement between the parties with regard to the other items and I therefore beg to report on these items as follows:—

Off-Shift Differential and Differential for Saturdays and Sundays (Items 2 and 3)

The employer, in its operations, performs certain processes which are continuous and require a continuous schedule of work hours for these employees engaged in these operations. These employees work on three eight-hour shifts, from eight a.m. to four p.m.; four p.m. to twelve midnight; twelve midnight to eight a.m. Sufficient employees are engaged in this work that an arrangement has been in force whereby employees' times are staggered and the working operations of Saturday and Sunday are shared equally.

To those employees working on the shift commencing at four p.m. there has been, heretofore, in operation a 4-cent an hour shift differential and for those employees working on the shift commencing at midnight there has been in force a 6-cent an hour shift differential. These shift differentials are a bonus on the regular rate of pay. Heretofore, when these respective shifts fell on a Saturday or Sunday, the same rate of pay has applied as when these respective shifts fell on a weekday. On behalf of the employees demand has been made that time and a half as though for overtime should be paid for all hours worked between twelve noon Saturday and eight a.m. Monday morning.

After considering all representations, I am of the opinion and would report that the principle of considering the hours of Saturday and Sunday above referred to as overtime, where the operation worked upon by reason of its nature must of necessity be a seven day continuous operation, is not established, and the demand for overtime pay for such periods is not maintainable. Some consideration by way of a shift differential however, is possible. After fully considering the matter, I would recommend that the parties adopt a shift differential for the shift from four to twelve, known as the afternoon shift, and the shift from twelve to eight, known as the midnight shift ,at the rate of six cents and

On January 30, 1951, the Minister of Labour received the report of the Board of Conciliation and Investigation appointed to deal with a dispute between Eldorado Mining and Refining (1944) Limited, Port Hope, Ontario, and Local 13173, District 50, United Mine Workers of America (L.G., Feb., 1951, p. 193).

The Board was composed of His Honour Judge W. F. Schwenger, Hamilton, Chairman; J. P. Pratt, K.C., and Herbert Orliffe, both of Toronto, members appointed on the nominations of the employer and union, respectively.

The text of the Board's report is reproduced herewith.

eight cents (6¢ and 8¢) per hour respectively, with an increase where these shifts fall on Saturday and Sunday to eight cents and ten cents (8¢ and 10¢) per hour respectively.

Wages (Item 1)

With regard to wages, the parties took different views as the basis for determining this item. On behalf of the employer, it was contended that any increase should have some direct relation to the increased cost of living in the interval since the last agreement, and on behalf of the employees it was equally as seriously contended that reference should be had only to the standard of wages paid in other industries. The failure of the parties to agree on this matter was a disappointment to the board, since the difference between them ultimately was not great, and it was left to the board to make a recommendation. In connection with the matter of wages, the question of retroactivity came up for discussion, and was finally left for report by this board.

It is to be noted by the wage schedule, that while the general plant labour rate has been 86 cents an hour, nevertheless the great majority of the employees come under some particular classification which entitles them to a higher rate per hour. Having this in mind, I am of the opinion that all employees in all classifications should receive an increase of nine (9¢) per hour. Taking into account the history of the negotiations between the parties in an endeavour to reach agreement before submission to this board, I am of the opinion, and would recommend to the parties that they adopt the above suggestion as to wage scale for the term of one year, and that it be adopted retroactively to the 1st day of August, 1950, being the date of expiration of the former agreement.

I beg to state in conclusion that your board was pleased with the manner in which presentations were made by the parties appearing before it in this matter, all proceedings having been carried on with due courtesy and respect, not only to the board, but to each other, despite the fact that arguments were firmly made. The clear and intelligible presentations made to the board were of great assistance in simplifying an understanding of the matters to be considered and the proceedings were thereby expedited.

All of which is humbly reported, this 18th day of January, A.D. 1951.

Board of Conciliation

(Sgd.) Wm. F. Schwenger,
Chairman,
Board of Conciliation.

I concur in the Report of the Chairman, this 25th day of January, A.D. 1951.

(Sgd.) J. P. Pratt,
Member,
Board of Conciliation.

I concur in the Report of the Chairman, this 25th day of January, A.D. 1951.

(Sgd.) Herbert Orliffe,
Member,
Board of Conciliation.

Collective Agreements and Wage Schedules

Recent Collective Agreements

A file of collective agreements is maintained in the Economics and Research Branch of the Department of Labour. These are obtained directly from the parties involved and through the Industrial Relations Branch of the Department. A number of those recently received are summarized below.

Agreements made obligatory under the Collective Agreement Act in Quebec and schedules under Industrial Standards Acts, etc., are summarized in separate articles following this.

Manufacturing

Tobacco and Liquors

LONDON, ONT.—JOHN LABATT LIMITED AND NATIONAL BREWERY WORKERS' UNION, LOCAL 1 (CCL).

Agreement to be in effect from October 1, 1950, to September 30, 1951, and thereafter from year to year, subject to notice. This agreement is similar to the one previously in effect (L.G., July, 1950, p. 1047) with the following changes:—

Overtime: only watchmen are now excepted from being paid time and one-half for Sunday work: previously both watchmen and engineers were so excepted.

Wage rates have been increased and are now as follows: watchmen (not more than 12 hours in any one day), fermenting room and cold storage, brew house, wash house, bottlers operating machines $1.25 per hour; other bottlers $1.20; coopers $1.38¾ per hour; truck drivers, highway $51.70, retail delivery $49.50, helpers $48.20 per week; engineers, 2nd class $1.60 and 3rd class $1.49 per hour.

Escalator clause: the provisions for the cost-of-living bonus have been adjusted to the new term of the agreement and to the changes in the cost-of-living index: in addition to the above basic wages, a cost-of-living bonus of $3.30 per week shall be paid; this bonus shall be adjusted upward or downward quarterly commencing January 1, 1951, depending on the variation between the August 1, 1950, cost-of-living index (168·5) published by the Dominion Bureau of Statistics and the indices, as presently calculated, published for November 1, 1950, and quarterly thereafter. Each one point increase or decrease in the index shall be equal to an increase or decrease of 37·2 cents per week in the bonus.

Off-shift differential: the provision, that the additional 5 cents per hour for work on shifts starting between 2 p.m. and 4.59 a.m. shall not apply to truck drivers (highway), has been omitted.

NEW WESTMINSTER, B.C.—THE BRITISH COLUMBIA DISTILLERY COMPANY LIMITED AND THE DISTILLERY, RECTIFYING AND WINE WORKERS' INTERNATIONAL UNION OF AMERICA, LOCAL 69.

Agreement to be in effect from November 16, 1950, to November 16, 1952, and thereafter from year to year, subject to 2 months' notice. However, for the period November 16, 1951, to November 16, 1952, the wage rates may be re-negotiated by either party giving notice to the other party of such intention on or before September 16, 1951.

Union security: the company agrees to keep in employment only members of the union in good standing. All new employees must join the union immediately upon being hired, provided they will be classified as permanent employees. All employees will be considered temporary employees until they have completed 90 days of continuous service; prior to their commencing work they must secure from the union a temporary working permit and pay all required fees as prescribed by the union. There shall be no restraint, coercion, interference or discrimination by the company against any union member because of union membership or activity.

Hours: 8 per day 5 days a week, a 40-hour week. *Overtime:* time and one-half for work in excess of above hours, double time for work on Sunday or the regularly scheduled day of rest and on 8 specified *paid holidays.*

Vacations with pay: to employees with less than 4 years' service one week, or part thereof, if qualified in conformity with the Annual Holidays Act of the province of British Columbia; to employees with 4 or more years of continuous service 2 weeks.

Hourly wage rates for certain classes: production—still operators $1.48, gin still operator $1.45; mill, mash tub, yeast room, tank house and dry house operators $1.39½; granary, scale floor, fermenting house and beer well operators, grain car unloaders, tank house helper $1.34; meal floor general help, tank house general help, dried grain baggers, dried grain checkers $1.27½; utility labour $1.24, industrial general help $1.21; warehousing—pumper and weigher (to bottle shop) $1.32½, charge hands $1.36, general help $1.27½, coopers $1.41½, coopers' apprentices $1.27½ to $1.39½, hoop drivers $1.34; bottling—case room clerk $1.45½, helper $1.27½; female employees 84 to 97 cents; filter packers (female) 99½ cents; power—fireman $1.42½, engine room attendant $1.39½, oil fuel tenders $1.33½; maintenance—millwright $1.53, class A $1.45, class B (oiler) $1.39½, helper $1.34; pipe fitter and pump mechanic $1.50½; pipe fitter, class A $1.45, class B $1.39½, mechanics helpers $1.34; electrician $1.50½, class A $1.45, class B $1.39½, helper $1.34; carpenter $1.53, painter, blacksmith and welder $1.45; trucks, drivers $1.34, swampers $1.27½; students (summer vacation), under 18 years of age $1, over 18 years of age $1.16; male general help with less than 3 months' seniority will be paid 5 cents per hour below job rate; the rates for still operators, firemen and oil fuel tenders include 3 cents per hour as differential for working 3 shifts, alternating weekly. (The above rates represent an increase of 10 cents per hour over the previous rates.)

Provision is made for *seniority rights* and *grievance procedure.*

Textiles and Clothing

TORONTO, ONT.—ASSOCIATED CLOTHING MANUFACTURERS AND AMALGAMATED CLOTHING WORKERS OF AMERICA.

Agreement to be in effect from July 1, 1949, to June 30, 1952, but notice shall be given by either party to the other 90 days prior to July 1 in each year, intimating any change, amendment, or abrogation of the existing wage scale.

Union security: the employers agree to operate preferential union shops. Application for additional workers shall be made to the union; if the latter is unable to furnish satisfactory workers within 48 hours, a manufacturer may then secure such workers as he can. Any applicant for membership in the union must be admitted, provided the applicant is not an offender against the union and is eligible for membership under its rules. No employer shall place obstacles in the way of legitimate efforts of the union to recruit new members.

Check-off: the members of the Association agree to deduct monthly from the pay of all their employees the prescribed dues and assessments of the union and to remit same to the union.

Hours: 8 per day Monday through Friday, a 40-hour week. *Overtime* shall be dispensed with as far as possible, but when it is necessary it shall be paid for at time and one-half. Six specified holidays shall be *paid holidays.* Work performed on legal holidays shall be paid for at time and one-half. Equal division of work shall be observed as far as possible in slack seasons.

Vacations: the employers shall grant a second week of vacation with pay to each of their employees in accordance with the decision and directions of the arbitrator (1948).

Apprentices: the employers shall have the privilege of developing workers through the apprenticeship system on a basis to be determined by representatives of the two parties.

Premium Fund: The members of the Association will continue to contribute to the Amalgamated Clothing Workers Premium Fund for the duration of the agreement an amount equal to 3 per cent of the gross wages payable to all production employees except those who act in a supervisory capacity.

Pension Fund: the demands of the union for the establishment of a Pension Fund shall be submitted to arbitration and the award of the impartial chairman of the Board of Arbitration shall be deemed to be incorporated as a provision of this agreement.

Provision is made for *grievance procedure* and the *establishment of an efficient employment office.*

Wood Products

VANCOUVER, B.C.—HAMMOND FURNITURE COMPANY, LIMITED, AND INTERNATIONAL WOODWORKERS OF AMERICA, LOCAL 1-217.

Agreement to be in effect from August 16, 1950, to August 15, 1951, and thereafter from year to year, subject to 60 days' notice.

Union security: any employee who is a member of the union in good standing, or who becomes or is reinstated as a member, shall, as a condition of continued employment, maintain such membership in good standing throughout the term of the agreement, subject to such procedure as may be mutually satisfactory to both parties. No employee shall be subject to any penalties against his application for membership or reinstatement, except as may be provided for in the constitution of the union.

Check-off: the company agrees to deduct union dues monthly from the pay of all employees who so authorize and to remit same to the union. The authorization will be honoured until revoked by the employee.

Hours: 8 per day 5 days a week, a 40-hour week. *Overtime:* time and one-half for work in excess of the above hours and for work on Saturdays and Sundays (or the alternative days off) and on 3 holidays; double time and one-half for work on 4 specified *paid holidays.*

Rest periods: all employees shall receive two 10-minute rest periods a day.

Vacations with pay will be granted to employees in accordance with the provisions of the British Columbia Annual Holidays Act. All employees with 5 or more years' continuous service will receive an additional regular week's vacation with pay or pay in lieu thereof.

Hourly wage rates in effect prior to the effective date of the agreement are increased by 10 cents per hour, effective August 15, 1950, and may be revised once annually. The rates for certain classes are as follows: mill department—planer man $1.31, learner planer man $1.02 to $1.31; swing saw break-down $1.18; straight line rip saw, cabinet planer, panel saw feeder, jeep and truck operator, automatic boring machine operator $1.13; clamp carrier, sorter, lumber unpiler $1.08; learners (other than learner planer man), mill labourer $1.02; machine department—knife grinder, stickerman, automatic shaper, double end tenoner $1.31; saw filer $1.29; shaper feeder $1.18; ripsaw operator, mortizer machine, router machine, bandsaw, double cut-off operator $1.13; sticker feeder, truck monkey $1.08; glue, press and veneer departments—swing saw and lay-out $1.18; clipper operator faces $1.13; clipper operator backs, veneer press, taper faces, glue mixer $1.08; labour, hot plate press $1.02; assembly and clamp department—repair man $1.23, cabinet maker with tools $1.18, drawer fitter $1.13, bed assembly $1.08; paint department—spray men $1.18; mixer, filler man $1.08; maintenance—electrician $1.39, maintenance men $1.29, maintenance helper $1.18, oiler $1.13; girls' rates in various departments—87 cents to $1.02. The starting rate for girls and boys is 82 cents with a 5 cents per hour increase each 3 months until the regular job rate is reached. When a girl is transferred to a machine, classified under mens' rates, she shall receive the rates specified for that machine while so employed.

Off-shift differential: a premium of 6 cents per hour will be paid for work on the second and third shifts.

Provision is made for an *Accident Prevention Committee, grievance procedure* and *seniority rights.*

Printing and Publishing

VANCOUVER, B.C.—CERTAIN NEWSPAPER PUBLISHERS AND THE INTERNATIONAL TYPOGRAPHICAL UNION, LOCAL 226.

Agreement to be in effect from October 1, 1950, to September 30, 1951.

Union security: the publishers agree to employ in their composing room members of the union. The union shall furnish sufficient competent journeymen to meet the normal requirements of the publishers; should it fail to do so, the publishers' only recourse is to cancel this agreement. If no competent machinist member is available, the publishers may employ a linotype machinist who is not a member of the union, provided that the latter applies and is accepted for membership in the union.

Hours: 7½ hours per day (both day and night shifts) 5 days a week, a 37½-hour week. *Overtime:* time and one-half for any shift in excess of 5 within any financial week and for work on a regular off-day or off-night; double time for work on Sunday (except for regular editions) and on 6 *paid holidays* (previous agreement provided for 5 paid holidays). When a holiday is observed, the night prior to the holiday shall be the off-shift for both morning and evening papers. Under extraordinary conditions, such as breakdown or unusual occurrence, men may be required to get out regular editions at single price, if work is not completed within the regular hours. Employees called back after one hour shall receive $1 for such call-back in addition to the prescribed rate of pay.

Vacations with pay: 10 days to employees whose cards have been on the slipboard for one or more consecutive years; members having 10 or more years' service shall be entitled to 5 additional days, provided they have worked a minimum of 150 shifts during the preceding 12 months; otherwise they shall receive one day for each 15 shifts worked.

Hourly wage rates: for day work $1.90, for night work $2; when a shift is worked part day and part night, the night scale shall be paid; machinist-operators, when on duty as such, shall receive a minimum of 75 cents per shift more than the above rates; apprentices—1st 6 months 30 per cent of journeymen's scale, 2nd 6 months 35 per cent, 2nd year 40 per cent, 3rd year 50 per cent, 4th year 60 per cent, 5th year 75 per cent and 6th year 90 per cent of journeymen's scale; machine learners (must be journeymen members of the union)—1st 3 weeks 40 per cent of scale, 2nd 3 weeks 50 per cent, 3rd 3 weeks 66⅔ per cent, next 4 weeks 75 per cent and last 4 weeks 85 per cent of scale.

Apprentices: for each 10 journeymen, or major fraction thereof, one apprentice may be employed; no youth under 16 years of age shall be accepted to apprenticeship. Registered apprentices shall be given the same protection as journeymen and shall be governed by the same shop rules, working conditions and hours of labour.

Provision is made for the *settling of disputes* and *seniority rights.*

Metal Products

TORONTO, ONT.—THE JOHN INGLIS COMPANY, LIMITED, AND THE UNITED STEELWORKERS OF AMERICA, LOCAL 2900.

Agreement to be in effect from July 12, 1950, to July 11, 1952, and for a further period of one year, unless 60 days' notice of termination is given by either party. The company acknowledges and accepts the union as the sole collective bargaining agency for all eligible employees. Both parties agree that there will be no intimidation, restraint or coercion because of membership or non-membership in the union. Membership in the union will not be discouraged.

Hours: for day shift—8 per day Monday through Friday; for night shift—8¾ per day Monday through Thursday, 5 on Friday, a 40-hour week in either case (a reduction of 1½ hours per week). *Overtime:* time and one-half for the first 4 hours worked in excess of the above hours and for work on Saturdays; double time after the first 4 hours of overtime and for work on Sundays and on 8 specified *paid holidays.*

Vacations with pay: employees with from 3 months' to 2 years' seniority shall be paid 2 per cent of their annual earnings, those with 2 to 3 years' seniority 2½ per cent, those with 3 to 20 years' seniority 4 per cent and those with over 20 years' seniority 6 per cent of their annual earnings. Vacations must be taken during the period of the plant shutdown.

Hourly wage rates for certain classes: general engineering division—layout man $1.35 to $1.51; machinist, fitter, boilermaker, millwright $1.35 to $1.46; welder $1.29 to $1.46; patternmaker $1.40 to $1.57; improver to above trades, cranemen and slingers, machine operator $1.18 to $1.29; blacksmith $1.24 to $1.46; helpers $1.12 to $1.18; radial drill operator $1.24 to $1.35; tractor crane operator $1.29 to $1.51; oil and belt man $1.12 to $1.18; painter $1.12 to $1.24; general labourer (heavy), janitor $1.12; carpenter $1.29 to $1.40; carpenters' helper, production chaser, material truckers $1.12 and $1.13; stores clerk $1.12; truck driver, furnace operator $1.12 to $1.24; coal passer $1.13; apprentices from 76 cents during first 6 months to $1.29 during last part of fourth year; consumer products division—production operator, male $1.11 to $1.24, female 89 cents to $1.02; automatics (single spindle) set up $1.24 to $1.35; automatic screw machine (single spindle) operator $1.11 to $1.24; heat treater, plater (electro chrome) $1.24 to $1.35; storekeeper $1.13 to $1.29; toolmaker $1.29 to $1.57; diemaker (specialist) $1.64; machinist $1.29 to $1.46; probationary employees, male, start at $1.06, after one month's service $1.11 or $1.12, female, start at 85 cents, after one month 89 cents. Time and one-quarter for dirty work shall be paid on repair jobs if properly authorized by foreman.

Off-shift differential: a premium of 5 cents per hour is paid to employees working permanently on the night shift and a premium of 3 cents per hour to employees working on the afternoon or rotating shift.

Provision is made for *seniority rights, grievance procedure* and *X-ray examination* for employees in glass spraying and sand-blasting operations.

HAMILTON, ONT.—THE STUDEBAKER CORPORATION OF CANADA, LIMITED, AND THE INTERNATIONAL UNION UNITED AUTOMOBILE, AIRCRAFT AND AGRICULTURAL IMPLEMENT WORKERS OF AMERICA, LOCAL 525.

Agreement to be in effect from August 25, 1950, to August 24, 1951, and thereafter, subject to 30 days' notice. The company recognizes the union as the sole bargaining agent for all eligible employees.

Check-off: the company shall deduct monthly from the pay of all employees in the bargaining unit such sums as may be assessed by the union on its members as dues and assessments for general union purposes in accordance with its constitution and by-laws, excluding any initiation fee and any special assessment which relates to special union benefits in which non-union members do not participate.

Hours: 8 per day Monday through Friday, a 40-hour week. *Overtime:* time and one-half for work in excess of above hours and for work on Saturdays and Sundays; double time and one-half for work on 8 specified *paid holidays*. When an hourly rated employee has left the premises and is called upon to return for work prior to his regularly scheduled time he shall receive two and one-half hours' pay for the first hour and his regular hourly rate thereafter, subject to any premiums where applicable.

Vacations with pay: one week after one year's service and 2 weeks after 5 years' service; employees with less than one year's service will receive one day for each 2 months' service.

Wages: effective August 14, 1950, employees are granted increases amounting to an average overall increase of approximately 5 cents an hour.

Night-shift differential: an employee who works on a shift, one-half or more of the working hours of which are regularly scheduled between 6 p.m. and 8 p.m., will be paid 10 cents per hour extra for all hours worked beyond the regularly scheduled starting time of his shift.

Insurance: the company agrees to increase its present contribution to the insurance company by $1.06 per week per hourly rated employee. The nature of the increased insurance coverage whether life benefit, sickness and accident benefit or family coverage benefit and the amount of the employees' weekly contribution for the increased benefits are to be determined later.

Pension plan: it has been agreed that the pension provided and paid for solely by the company will parallel the pension coverage agreed upon between the International Union (UAW/CIO) and General Motors of Canada, Limited, in their most recent agreement. Complete details of the plan remain to be worked out by the two parties.

Provision is made for *grievance procedure* and *seniority rights*.

GUELPH, ONT.—FEDERAL WIRE AND CABLE COMPANY, LIMITED, AND THE UNITED STEELWORKERS OF AMERICA, LOCAL 3021.

Agreement to be in effect from October 23, 1950, to October 22, 1951, and thereafter from year to year, subject to notice. This agreement is similar to the one previously in effect (L.G., March, 1950, p. 342), with the following changes:—

Hours of work have been reduced from 48 to 45 hours per week; where the schedule calls for 48 hours per week, employees shall be paid at overtime rate for any time worked in excess of 45 hours. The number of *paid holidays* is increased from 6 to 7.

Wage rates are increased by 9 cents per hour, retroactive to September 1, 1950.

VANCOUVER, B.C.—VANCOUVER ENGINEERING WORKS, LIMITED, AND INTERNATIONAL ASSOCIATION OF MACHINISTS, LODGE NO. 692.

Agreement to be in effect from September 15, 1950, to September 14, 1951. Should either party desire to terminate, revise or amend this agreement, written notice shall be given to the other party as provided in the Industrial Conciliation and Arbitration Act, 1947, as amended.

Union security: the company agrees that, as a condition of continued employment, all employees must become members of the union within 30 days of the date of their employment.

Hours: the standard work day shall consist of 8 hours and the standard work week of 40 hours on the first shift; if second and third shifts are employed, the hours of work shall be 7½ and 7 hours, respectively, with 8 hours' pay in either case. Five shifts, Monday through Friday, shall constitute a regular week's work on all shifts. *Overtime:* time and one-half for the first 4 hours after the regular shift and for work between 8 a.m. and 12 noon Saturday; double time thereafter and for work performed prior to the regular starting time, on Sunday and on 9 specified holidays, 5 of which are *paid holidays*.

Vacations with pay will be granted in accordance with the Annual Holidays Act of the Province of British Columbia.

Hourly wage rates: heavy machine division—tool makers, diemakers, tool heat treators $1.60; machinists, fitters, welders, inspectors, precision grinders, production set-up men, electricians, millwrights $1.50; specialists $1.34½ (specialists on radial drills where boring and sizing are done shall receive journeyman rate of pay); electric crane men $1.40; helpers $1.26; leading hands 5 or 10 cents and charge hands 15 or 20 cents over basic rate; light machine division—machine operators from 85 cents per hour during first month to $1.35 after 2 years; metal polishers and buffers, 1st month $1.05, next 2 months $1.15, 2nd 3 months $1.20, 3rd 3 months $1.25, thereafter $1.35; female assembly workers 75 cents to $1.10. Machine operators, metal polishers and buffers who reach the top rate will be considered specialists. When the company's operations include work within the limits of the Greater Vancouver area, shop rates shall prevail on repair and overhaul jobs and the resetting of machinery and engines. However, where same is ruled to be new construction, or when other construction unions affiliated with the Vancouver Building Trades Council are involved, field rates shall apply. In the case of shipwork not normally done by the company or when shipwork is sub-contracted from the shipyards or men are employed in the shipyards, the current wage rates prevailing in the shipyards will be paid providing the same are not lower than the above shop rates.

Provision is made for *grievance procedure, seniority rights* and *out-of-town work*.

Non-metallic Minerals and Chemicals

NOBEL, ONT.—CANADIAN INDUSTRIES LIMITED AND UNITED MINE WORKERS OF AMERICA, DISTRICT 50, CANADIAN CHEMICAL DIVISION, LOCAL 13031.

Agreement to be in effect from January 2, 1951, to January 1, 1952. This agreement is similar to the one previously in effect (L.G., Feb., 1950, p. 206), with the following changes and addition:

Hours of work have been reduced from 44 to 42 per week and are now: for day workers—8½ per day Monday through Thursday, 8 on Friday, a 42-hour week; for shift workers—8 per day, 5 days a week for 3 consecutive weeks and 6 days a week for the fourth week, an average of 42 hours per week.

Rest periods: this agreement does not limit the rest period during the second half of the shift for certain production employees to the months of June, July and August.

Wage rates, with a few exceptions, have been increased from 10 to 13 cents per hour.

Off-shift differential: a premium of 5 cents an hour is now granted for work performed on regularly scheduled evening or night shifts commencing between 3 p.m. and 6 a.m.

No provision is made in this agreement for a Plant Advisory Committee.

JAMES ISLAND, B.C.—CANADIAN INDUSTRIES LIMITED, JAMES ISLAND WORKS, AND THE CANADIAN CHEMICAL AND EXPLOSIVES WORKERS' INDUSTRIAL UNION, FEDERAL UNION NO. 128 (TLC).

Agreement to be in effect from June 1, 1950, to May 31, 1951. This agreement is similar to the one previously in effect (L.G., Feb., 1950, p. 207), with the following changes:—

Paid holidays are increased from four to eight; employees shall be paid double time for work on any of the 8 holidays if entitled to payment, and time and one-half if not entitled to payment.

Wage rates are increased from 1 to 3 cents per hour.

Miscellaneous

TORONTO, ONT.—GLOBE BEDDING COMPANY LIMITED AND UPHOLSTERERS' INTERNATIONAL UNION OF NORTH AMERICA, LOCAL 400.

Agreement to be in effect from September 27, 1950, to December 31, 1951, and thereafter from year to year, subject to notice. It is provided, however, that the wage question may be opened during the month of March, 1951, if conditions warrant it; any changes agreed upon shall be retroactive to March 1, 1951. The company recognizes the union as the sole collective bargaining agency for all employees.

Union security: all employees in the bargaining unit who have served the 6 weeks' probationary period shall, as a condition of employment, become and remain members of the union in good standing.

Check-off: the company agrees to deduct union dues monthly from the pay of all union members and remit same to the union.

Hours: 8 per day Monday through Friday, 4 on Saturday, a 44-hour week. *Overtime:* time and one-half for all work in excess of the standard work day, provided that the standard work week is completely worked (except in the case of authorized leave); double time and one-half for work on 7 specified *paid holidays* (an increase of two). *Rest and cleaning-up periods:* employees will be granted rest periods of 10 minutes each in the morning and afternoon and 5 minutes for cleaning up before the end of the day.

Vacations with pay: one week after one year's service, 2 weeks after 5 years' service.

Minimum hourly wage rates (for males and females, respectively)—probationary period of 6 weeks 70 and 60 cents, 2nd 6 weeks 75 and 65 cents, 2nd 3 months 80 and 70 cents, 3rd 3 months 85 and 75 cents, 4th 6 months 90 and 80 cents, after 1 year 95 and 85 cents; youths (under 18 years of age)—starting rates 55 cents, after 3 months 60 cents, after 6 months 65 cents. The company agrees to negotiate on wage increases for all male employees now earning 95 cents per hour but under $1, who have been with the firm for one year or more. When experienced workers are hired, they shall receive prevailing rates. The company accepts the principle of equal pay for equal production.

Escalator clause: the company agrees to continue the cost-of-living bonus. For every increase in the Dominion Bureau of Statistics' cost-of-living index of one point above 148·3, the bonus shall be increased by 25 cents per 44-hour week; should the index decrease, a corresponding amount shall be deducted, but the wage rate shall not be reduced.

Social security: the employer agrees to pay towards the Upholsterers' International Union Social Security Plan 3 per cent of the union employees' payroll.

Provision is made for *grievance procedure, seniority rights* and the *safety and health* of employees.

Collective Agreement Act, Quebec

Recent proceedings under the Collective Agreement Act, Quebec,* include the amendment of ten agreements. In addition to those summarized below, they include: the amendment of the agreement for barbers and hairdressers at Quebec published in the *Quebec Official Gazette* issue of January 5, and the amendment of the agreements for barbers and hairdressers at Valleyfield and at Joliette in the issue of January 20.

A request for a new agreement for the printing trades in the Quebec District and requests for the amendment of the agreements for garages and service stations at Montreal and for barbers and hairdressers at Sherbrooke were gazetted December 23. A request for the amendment of the agreement for plumbers at Three Rivers was gazetted December 30. A request for a first agreement for the ladies' handbag, purse, etc. manufacturing industry in the Province and a request for the amendment of the agreement for the baking industry were gazetted January 5. A request for a new agreement for garages and service stations at Sherbrooke and a request for the amendment of the agreement for retail stores at Windsor were published in the issue of January 13. A request for the amendment of the agreement for hospital and charitable institution employees at St. Hyacinthe was gazetted January 20.

Orders in Council were also published approving the levy of assessments on the parties.

Manufacturing

Textiles and Clothing

MEN'S AND BOYS' HAT AND CAP INDUSTRY, PROVINCE OF QUEBEC.

An Order in Council, dated December 21, and gazetted January 5, amends the previous Orders in Council for this industry (L.G., Aug., 1945, p. 1197; Nov., 1946, p. 1583; Sept., 1948, p. 993, and previous issues).

The Montreal Hat and Cap Manufacturers' Association Inc. is accepted as co-contracting party and its name is added to the parties of the first part.

Industrial jurisdiction governs the manufacture of hats and caps for men and boys and all kinds of head wear for male or female children, but does not include the fabrication of headwear for men and boys made of fur or woollen felt bodies or forms and straw bodies or forms.

Hours remain unchanged at 8 per day, Monday through Friday, a 40-hour week.

Overtime as previously in effect is limited to 10 hours per week and is payable at regular rates. If necessary, employees will be obliged to work 4 hours on Saturday morning which shall be part of the 10 hours of overtime per week. In this amendment any work performed on any of 3 specified paid holidays (previously 2) will be paid for at the rate of double time.

Minimum weekly wage rates remain unchanged from those rates which were previously in effect as from July 1, 1948 (L.G., Sept., 1948, p. 993) and are as follows: cutters $33.40, operators $31, blackers $24.40, lining makers $20.50, hand finishers $17.20 and general hands $14.80. In any establishment where the piece-work system was in force when this agreement became effective, piece-work prices to be fixed at such rates as to assure the workers at least the above minimum rates.

Vacation: one week's vacation with pay to those employees who have been in the service of one employer not less than 12 months; employees with less than one year of service will receive vacation pay in proportion to the time worked. The vacation period is specified as the period during the months of June or July in each year. (Vacation provisions are similar to those previously in effect with the exception of that which governs those employees with less than one year of service.)

Fur and Leather Products

SHOE INDUSTRY, PROVINCE OF QUEBEC.

An Order in Council, dated January 11, and gazetted January 20, amends the previous Orders in Council for this industry (L.G., Jan.-Feb., 1948, p. 50, April, p. 331, Nov., p. 1245; Jan., 1949, p. 65; Jan., 1950, p. 77, Nov., p. 1902; Feb., 1951, p. 233, and previous issues). Agreement to remain in effect until September 1, 1951, and thereafter from year to year, subject to notice. The present amendment will be in effect from January 1, 1951.

Minimum wage rates: the new wage rates for hourly-paid and for piece-work employees are shown in the accompanying tables. Apprentices (600 hours) for classes 5 and 6 of the pattern making, cutting, sole leather, lasting, making and finishing departments and for class "C" of the sewing department shown in the accompanying tables are added classifications.

---

* In Quebec, the Collective Agreement Act provides that where a collective agreement has been entered into by an organization of employees and one or more employers or associations of employers, either side may apply to the Provincial Minister of Labour to have the terms of the agreement which concern wages, hours of labour, apprenticeship, and certain other conditions made binding throughout the province or within a certain district on all employers and employees in the trade or industry covered by the agreement. Notice of such application is published and 30 days are allowed for the filing of objections, after which an Order in Council may be passed granting the application, with or without changes as considered advisable by the Minister. The Order in Council may be amended or revoked in the same manner. Each agreement is administered and enforced by a joint committee of the parties. References to the summary of this Act and to amendments to it are given in the LABOUR GAZETTE, January, 1949, page 65. Proceedings under this Act and earlier legislation have been noted in the LABOUR GAZETTE monthly since June, 1934.

Minimum wage rates for *hourly-paid* employees of the pattern making, cutting, sole leather, lasting, making and finishing departments:—

	Zones I	II	III
Class 1	$1.05	$1.00	$0.92
Apprentice:			
1st, 1,200 hours	0.80	0.76	0.70
2nd, 1,200 hours	0.90	0.855	0.79
Class 2	0.90	0.855	0.79
Apprentice:			
1st, 600 hours	0.65	0.62	0.57
2nd, 600 hours	0.80	0.76	0.70
Class 3	0.80	0.76	0.70
Apprentice: 600 hours	0.65	0.62	0.57
Class 4	0.60	0.57	0.525
Apprentice: 600 hours	0.45	0.43	0.395
Class 5	0.45	0.43	0.395
Apprentice: 600 hours	0.40	0.38	0.35
Class 6	0.40	0.38	0.35
Apprentice: 600 hours	0.35	0.33	0.305

(The above rates are increases ranging from 4½ to 10 cents per hour over previous rates.)

Minimum hourly wage rates for *piece-work* employees of the pattern making, cutting, sole leather, lasting, making and finishing departments.

	Zones I	II	III
Class 1	$1.155	$1.10	$1.01
Apprentice:			
1st, 1,200 hours	0.88	0.835	0.77
2nd, 1,200 hours	0.99	0.94	0.87
Class 2	0.99	0.94	0.87
Apprentice:			
1st, 600 hours	0.715	0.68	0.625
2nd, 600 hours	0.88	0.835	0.77
Class 3	0.88	0.835	0.77
Apprentice: 600 hours	0.715	0.68	0.625
Class 4	0.66	0.625	0.58
Apprentice: 600 hours	0.495	0.475	0.435
Class 5	0.495	0.475	0.435
Apprentice: 600 hours	0.44	0.42	0.385
Class 6	0.44	0.42	0.385
Apprentice: 600 hours	0.385	0.365	0.335

(The above rates are increases ranging from 5 to 11 cents per hour over previous rates.)

Minimum hourly wage rates for *hourly-paid* employees of the sewing department.

	Zones I	II	III
Class A	$0.60	$0.57	$0.525
Apprentice: 600 hours	0.50	0.475	0.44
Class B	0.50	0.475	0.44
Apprentice: 600 hours	0.40	0.38	0.35
Class C	0.40	0.38	0.35
Apprentice: 600 hours	0.35	0.33	0.305

(The above rates are increases ranging from 4½ to 10 cents per hour over previous rates.)

Minimum hourly wage rates for *piece-work* employees of the sewing department.

	Zones I	II	III
Class A	$0.66	$0.625	$0.58
Apprentice: 600 hours	0.55	0.52	0.485
Class B	0.55	0.52	0.485
Apprentice: 600 hours	0.44	0.42	0.385
Class C	0.44	0.42	0.385
Apprentice: 600 hours	0.385	0.365	0.335

NOTE: the classification stitching vamp or outside counter on Puritan machine included in the section of this agreement governing the sewing department will be paid the minimum rate of Class 1 operations applicable to the pattern making, cutting, etc. departments shown above.

(The above rates are increases ranging from 4½ to 11 cents per hour over previous rates.)

Printing and Publishing

PRINTING TRADES, QUEBEC.

An Order in Council, dated December 14, and gazetted December 23, amends the previous Orders in Council for this industry (L.G., Feb., 1949, p. 178; March, 1950, p. 345, June, p. 874) and another amendment published in the *Quebec Official Gazette* issue of August 19, 1950, by extending the terms of this agreement until February 28, 1951.

Metal Products

SHEET METAL MANUFACTURING, MONTREAL.

An Order in Council, dated December 14, and gazetted December 23, amends the previous Orders in Council for this industry (L.G., Aug., 1950, p. 1185).

Minimum hourly wage rates are increased by from 5 to 6 cents per hour in most cases and are now as follows:—sheet metal mechanics $1.26; assistant-foreman $1.39; charge hand, welder class "A", toolmaker $1.33; machinist mechanic $1.28; welder class "B", blacksmith $1.22; painter $1.20; buffer and polisher class "A", $1.16; welder class "C", machinist, assembler and specialist $1.10; spray painter $1.05; machine operator $1.04; production welders from 88 cents during the first 6 months to $1.04 in the fourth 6 months, when they become eligible for class "C", if they qualify; production workers, truck driver, stock and storekeepers, warehousemen (receiving and shipping) 90 cents; helpers 85 cents. Rates for apprentices 61 cents plus 5 cents per hour increase each 6 months of continuous service and for boys (16 to 18 years of age) 56 cents plus 5 cents per hour each 6 months of continuous service until their nineteenth year when they shall be classified and paid as helpers, remain unchanged. Night shift differential remains unchanged at 5 cents per hour extra.

Construction

BUILDING TRADES, CHICOUTIMI.

An Order in Council, dated December 14, and gazetted December 30, amends the previous Orders in Council for this industry (L.G., Jan., 1948, p. 51, April, p. 334, Aug., p. 872; Aug., 1949, p. 987; Aug., 1950, p. 1185, Nov., p. 1904, and previous issues). This amendment to be in effect from January 1, 1951.

In a previous amendment published in the LABOUR GAZETTE, February, 1947, p. 185 the *regular hours of work* in all zones for this industry were established as 8 per day, 6 days a week, a 48-hour week; *overtime* to be payable at time and one-half after the tenth hour of work performed in any one calendar day. Another amendment published in the LABOUR GAZETTE, August, 1948, p. 872 divides the area affected by this agreement into 4 zones: zones I, I-A, II and III and *overtime remuneration* was as follows:—in zone I, time and one-half after 9 hours' work each day, with the exception of plumbers and steamfitters; in zones I-A, II and III, and for plumbers and steamfitters in zone I, time and one-half after 10 hours' work each day.

In the present amendment the provision governing *overtime* is amended by the addition of the following: "Notwithstanding the foregoing provisions, in zone I-A, the maximum duration of the regular hours of work will be 55 hours per week and no work to be performed on Saturday afternoon, except by night watchmen."

Minimum hourly wage rates: in a previous amendment summarized in the LABOUR GAZETTE issue of August, 1949, p. 987, the rates of zone I were increased by 5 cents per hour except crane operations (steam, gasoline, electricity, oil) for one to four drums inclusive, whose rate is $1.15 per hour. However, the above minimum wage rates and all other rates within the limits of the territorial jurisdiction of this agreement were to be amended according to the fluctuations of the Federal cost-of-living index, as follows, taking 160 points as a calculation basis: for each ten point increase or decrease in the cost-of-living index, the hourly minimum rates shall be 5 cents per hour higher or lower, as the case may be.

In the present amendment the minimum rates of wages in zone I-A (Counties of Abitibi-East, Abitibi-West and Rouyn-Noranda) are increased to the level of those of zone I with the exception of certain classifications whose new minimum rates are as follows:—plumbers and steamfitters, tinsmiths $1.25; junior journeymen (one year) $1.10; apprentices (plumbers and steamfitters) from 50 per cent of journeyman's rate in the first year to 80 per cent in fourth year. (The new minimum rates for journeymen plumbers and steamfitters, tinsmiths in zone I-A represent an increase of 25 cents per hour).

BUILDING TRADES, HULL.

An Order in Council, dated January 11, and gazetted January 20, amends the previous Orders in Council for this industry (L.G., Jan., 1950, p. 78, April, p. 517, Nov., p. 1905; Jan., 1951, p. 64) by providing that notwithstanding any other provisions, cities and towns and municipal corporations as well as school commissions are not governed by the terms of this agreement for repair and maintenance operations on buildings which they own; this also applies to building, rebuilding or maintenance operations on aqueducts, sewer, pavings, side-walks and other similar operations performed under their immediate direction. The exemption does not apply to contractors or sub-contractors carrying out such operations by contract or under the supervision of the said cities, towns, etc., comprised in zone I. The agreement applies, however, to contractors or sub-contractors carrying out similar operations by contract or under the supervision of the municipal corporations or school commissions of zone II, when the cost of such operations does not exceed $20,000, including wages and material.

Road operations carried out for the account of any Department of the Provincial Government which are already subject to the Fair Wage Schedule as per Order in Council number 800 of April 24, 1929, as amended, are not governed by the provisions of the present agreement.

Territorial jurisdiction comprises the counties of Hull, Gatineau, Papineau, Pontiac, Labelle and Temiscamingue. This area is divided into 2 zones: zone I—which previously comprised the city of Hull and within a radius of 10 miles of its limits now comprises the territory included in the county of Hull and within a radius of 10 miles of its limits; zone II—which previously included the territory of the county of Hull

(with the exception of the city of Hull and within a radius of 10 miles of its limits) now comprises the territory included in the counties of Gatineau, Papineau, Pontiac, Labelle and Temiscamingue.

Minimum hourly wage rates in zone II will be reduced by 25 per cent in the case of repair work not exceeding $500 annually, including wages and material. Rates for apprentices of zone II which are based on a percentage of the journeymen's minimum wages are now as follows: in those trades requiring an apprenticeship of 4 years—from 50 per cent in the first year (an increase of 10 per cent) to 90 per cent in the fourth year (an increase of 5 per cent); in those trades requiring an apprenticeship of 3 years —from 60 per cent in the first year to 90 per cent in the third year (an increase of 5 per cent over previous rates). The rates for apprentices requiring a 4-year apprenticeship and those rates for apprentices requiring a 3-year apprenticeship in zone I remain unchanged.

Service

Professional Establishments

HOSPITAL AND CHARITABLE INSTITUTION EMPLOYEES, QUEBEC DISTRICT.

An Order in Council, dated December 21, and gazetted January 5, amends the previous Orders in Council for this industry (L.G., Nov., 1944, p. 1369; Sept., 1946, p. 1254; Jan., 1947, p. 1251; Aug., 1948, p. 874; Oct., 1949, p. 1248).

Hours: 54-hour week (average over 3 weeks) for orderlies or patient attendants, stationary enginemen, firemen, motor-vehicle drivers and their helpers, watchmen, and skilled workers in the steam generating plant; 51 hours per week for office employees, telephone operators, information clerks, female tailors, seamstresses, laboratory employees and launderer and pressing room employees; 54-hour week for employees on rotating shifts of 8 hours, except enginemen and firemen; 54-hour week for all other employees subject to the terms of this agreement. (In most cases the above hours represent a reduction of 3 to 6 hours per week or average week as the case may be from those which were previously in effect.)

Overtime is payable either at time and one-half or by a paid day off equivalent to one and one-half times employees' hours of overtime, day off to be given in the four weeks following that during which overtime has taken place. Other overtime provisions include: orderlies or patient attendants, stationary enginemen, firemen, motor-vehicle drivers and their helpers and watchmen will be paid regular rates to the extent of 180 hours in 3 weeks, thereafter time and one-half; employees engaged on rotating shifts of 8 hours (except enginemen and firemen) performing work in excess of the standard work week of 54 hours will be paid regular rates to the extent of 168 hours in 3 weeks, thereafter time and one-half; skilled workers of the steam generating plant will be paid regular rates to the extent of 60 hours in a week, thereafter time and one-half. (The above provisions, applicable to certain classifications, which provide for payment of overtime at regular rates for work performed in excess of the standard average hours and up to a limited maximum duration of work before the rate of time and one-half becomes effective, are new.)

Specified holidays: to regular nurses—after agreement with the employer, 2 days off in the holidays period to be given on any of the following days: Christmas Day, New Year's Day or Epiphany Day. The above time off will be given in addition to the 4 days off for four weeks of work provided for in the previous agreement.

Minimum weekly and hourly wage rates: chief stationary enginemen $48 to $65 in zones I and II, $46 to $65 in zone III; enginemen 73 cents to 88 cents per hour in zones I and II, 70 cents to 85 cents in zone III; skilled machinery workers 93 cents in all zones; firemen 65 cents in zones I and II, 62 cents in zone III; chief cook, chief baker, chief butcher, chief launderer, chief shoemaker $43 in zone I, $42 in zone II, $41 in zone III; assistant chief cook $41 in zone I, $40 in zone II, $39 in zone III; cooks, butchers, launderers, shoemakers, bakers from $33 in the first 6 months to $40 after one year in zone I, from $31 to $39 in zone II, from $29 to $38 in zone III; motor-vehicle drivers from $27 during the first 6 months to $40 after 4 years in zone I, from $25 to $39 in zone II, from $23 to $38 in zone III; orderlies or patient attendants from $27 in the first 6 months to $40 after 4 years in zone I, from $27 to $39 in zone II, from $27 to $38 in zone III; certificated orderlies from $31 during the first 6 months to $41 after one year in all 3 zones; orderly (with diploma) from $34 during the first 6 months to $44 after one year in all 3 zones; construction tradesmen in districts in which there is no building trades agreement in force—skilled workers $39 in zones I and II, $35 in zone III; labourers $31 in zones I and II, $29 in zone III; other male employees not included in the foregoing—from $26 during the first 6 months to $38 after 4 years in zone I, from $25 to $37 in zone II, from $23 to $35 in zone III; regular female employees — departmental superintendents from $16 during the first 6 months to $22 after 3 years in all 3 zones; female tailor from $17 during the first 6 months to $21 after 3 years in all 3 zones; office employees, teachers, technicians' helpers, cooks from $15 during the first 6 months to $20 after 3 years in zone I, from $14 to $19 in zone II, from $13 to $18 in zone III; female service employee, female cook's helper, female launderer, seamstress and pressing room employees from $13 during the first 6 months to $18 after 3 years in zone I, from $12 to $17 in zone II and from $11 to $16 in zone III; junior employees (female) $11 in all 3 zones; female employees not included in the foregoing—from $12 during the first 6 months to $17 after 3 years in zone I, from $11 to $16 in zone II and from $10 to $15 in zone III; occasional employees (male and female) will be paid at the *pro-rata* of the hours worked in the course of the regular work week of the said employees and according to the hourly, daily or weekly minimum rates established in this agreement for the category to which they belong, as per the *scale for the first 6 months* with the exception of the following: stationary enginemen and firemen, construction tradesmen, etc. who will be paid the rates established in this

agreement or in the case of construction tradesmen the rates established for skilled workers and labourers where an agreement is in force for the building trades in the district affected by this agreement. (The above rates represent increases ranging from $1 to $3 per week for those employees paid on a weekly basis and 6 cents per hour for those paid hourly.) Rates for regular nurses from $29 during the first 6 months to $34 after one year in all 3 zones and rates for apprentices (construction tradesmen) from 40 per cent in the first year to 75 per cent of the wage rate of the maintenance men in the fourth year remain unchanged from those previously in effect.

Employees with one year or more of service will be entitled to 6 days of absence with pay due to illness, subject to certain conditions.

Vacation with pay for employees other than nurses and orderlies: in addition to an annual vacation with pay of at least 7 days after one year's service or a continuous annual vacation with pay of at least as many half days as there are calendar months of continuous service for one employer, as previously in effect, employees are now entitled to a continuous annual vacation with pay of at least 14 days after 7 years' service with one employer. The provision governing vacations with pay for nurses and orderlies remains unchanged.

As previously in effect where room and board are provided employees may not be charged in excess of $6 per week for both. In this amendment certificated nurses and regular female employees are now entitled to a weekly allowance of $3 if they cannot be provided with a room within the institution.

Industrial Standards Acts, etc.

Schedules of Wages and Hours Recently Approved by Provincial Orders in Council in Nova Scotia, New Brunswick, Ontario and Saskatchewan

Recent proceedings under the Industrial Standards Acts, Etc.* include one schedule made binding for the first time and three new schedules, all summarized below.

NOVA SCOTIA

Construction

CARPENTERS, SYDNEY.

An Order in Council, dated November 25, and gazetted December 6, makes binding the terms of a new schedule for carpenters at Sydney, to be in effect from December 16, 1950, to May 31, 1951.

The terms of this schedule are similar to those which were previously in effect and summarized in the LABOUR GAZETTE of April, 1950, p. 518, with the exception of the following:—

Minimum hourly wage rate for journeymen carpenters is now $1.40 per hour instead of $1.35 plus 2 cents per hour in lieu of vacation with pay (vacation pay not included in calculating overtime pay) as previously in effect. Rates for apprentices are increased by 3 cents per hour and are now as follows: from 71½ cents per hour during the first 500 hours to $1.26 during the eighth 1,000 hours.

Vacation: the provision governing the addition of 2 cents per hour to the minimum hourly rate for journeymen carpenters in lieu of vacation with pay mentioned in the former schedule is not included in this latest Order in Council.

NEW BRUNSWICK

Construction

ELECTRICAL WORKERS, MONCTON.

An Order in Council, approved December 13, and gazetted December 20, makes binding the terms of a first schedule for electrical workers (exclusive of apprentices) in the zone comprising the area within a radius of 5 miles from the City Hall in the City of Moncton and including the village of Dieppe, to be in effect from January 2, 1951, to March 31, 1951.

Hours: 8 per day, Monday through Friday, 4 on Saturday, a 44-hour week. If, on a regular working day, the nature of the work or the conditions prevailing are such to necessitate the carrying out of the work at periods other than the regular working periods, it may be carried out at other periods of the day and such periods will be known as *special working periods.* Hours for such periods shall not exceed in the aggregate 7½ hours Monday through Friday and 3¾ hours on Saturday.

Overtime is payable at the rate of $1.88 per hour for work performed during the first 4 hours on a regular working day, other than during a regular working period or a special working period; double time thereafter and on Sundays and 9 specified holidays. Work on Labour Day will be performed only under exceptional circumstances.

---

* In six provinces—Nova Scotia, New Brunswick, Ontario, Manitoba, Saskatchewan and Alberta—legislation provides that, following a petition from representatives of employers and employees in any (or specified) industries, the provincial Minister charged with the administration of the Act may himself, or through a government official delegated by him, call a conference of representatives of employers and employees. This conference is for the purpose of investigating and considering the conditions of labour in the industry and of negotiating minimum rates of wages and maximum hours of work. A schedule of wages and hours of labour drawn up at such a conference, if the Minister considers that it has been agreed to by a proper and sufficient representation of employers and employees, may on his recommendation be made binding by Order in Council in all zones designated by the Minister. The Minister may also establish an advisory committee for every zone to which a schedule applies to assist in carrying out the provisions of the Act and the regulations. References to the summaries of these Acts and to amendments to them are given in the LABOUR GAZETTE, April 1950, page 518.

Minimum hourly wage rates: $1.25 per hour during regular working periods; $1.33 per hour for work done during special periods.

This schedule shall not apply to any employee who is engaged to do the work of a maintenance man and who is in receipt of a regular salary nor to those employees engaged as linesmen.

ONTARIO

Manufacturing

Textiles and Clothing

LADIES' CLOAK AND SUIT INDUSTRY, PROVINCE OF ONTARIO.

An Order in Council, dated November 30, and gazetted December 16, makes binding the terms of a new schedule for the cloak and suit industry for the Ontario zone to be in effect from December 26, 1950, "during pleasure".

Hours remain unchanged at 8 per day Monday through Friday, a 40-hour week. No work will be performed on any of 5 specified holidays; such holidays will be paid for at regular rates providing employees have been engaged in the industry upwards of 12 months and in the employ of an employer upwards of 3 months. (The previous schedule did not provide for paid holidays.)

Overtime: time and one-half for work performed in excess of the regular working hours. Overtime is restricted to a limited amount and then only as authorized by a permit issued by the advisory committee. (Previously any authorized overtime was paid at regular rates.)

Minimum hourly wage rates: occupations are grouped into various classes as follows: —class "A"—machine presser, section operator, skilled cutter, skilled operator, top presser $1.20; class "B"—under presser $1.14; class "C"—skilled fur tailor $1; class "D"—trimmer 96 cents; class "E"—semi-skilled cutter, semi-skilled operator 92 cents; class "F"—piece presser 90 cents; class "G"—assistant fur tailor, hand baster, machine baster, special machine operator 76 cents; class "H"—finisher, lining maker, skirt maker 74 cents; class "I"—button sewer, general hand or examiner 52 cents per hour. (The rates shown above represent increases over the previous schedule in 1945, ranging from 13 cents per hour for class "I" to 29 cents for class "A" with the exception of class "F" whose rate is increased by 39 cents per hour.) Employees engaged on a time-work basis required to work only part of a regular day are entitled to not less than 4 hours' pay at regular rates. The advisory committee is authorized to set lower minimum rates for those workers who perform work included in more than one classification of employees, for those workers whose work is only partly subject to the provisions of this schedule or for those workers who are handicapped.

Each employer is assessed an amount equal to one-half of one per cent of his payroll and each employee one-half of one per cent of his wages to be paid to the advisory committee for revenue for the enforcement of the schedule.

SASKATCHEWAN

Manufacturing

Vegetable Foods

BAKERS AND BAKERY SALESMEN, MOOSE JAW.

An Order in Council, dated December 12, and gazetted December 23, makes binding the terms of a new schedule for bakers and bakery salesmen at Moose Jaw and within a radius of 5 miles, to be in effect from January 2, 1951, "during pleasure". This schedule is similar to the one previously in effect and summarized in the LABOUR GAZETTE issues of June, 1948, p. 622; March, 1949, p. 304, December, 1949, p. 1561, with the following exceptions:—

Minimum weekly wage rates in the present schedule represent increases ranging from $4 to $4.50 per week for most classifications in the baking industry with the exception of bakery salesmen whose rates remain unchanged ($30 per week guaranteed) but with the addition of a clause which provides an extra compensation of $2.50 per week to be paid to each salesman. Certain new classifications are added and are as follows: —ovenman's helper $32, maintenance man's helper $32.50, bread wrapper's helper $30.50, female finishers and cake wrappers $29, female bread racker and packer $26.50. New inexperienced employees will receive 10 per cent less than the rates established in the present schedule during the first 3 months, 5 per cent less in the second 3 months and at the end of 6 months will be paid the prevailing rates. Female employees performing the duties of a male will be paid not less than 100 per cent (previously 90 per cent) of that paid classification on the principle of *equal pay for equal work.*

Extra compensation of 10 cents per hour will be paid for all work performed between the hours of 9 p.m. and 6 a.m. instead of between 10 p.m. and 5 a.m. as previously in effect.

FAIR WAGES CONDITIONS IN DOMINION GOVERNMENT CONTRACTS

The Fair Wages Policy of the Dominion Government has the purpose of ensuring that all government contracts contain provisions to secure the payment of wages generally accepted as current in each trade for competent workmen in the district where the work is carried out.

There are two sets of conditions applicable to government contracts, those which apply to building and construction work, and those which apply to contracts for the manufacture of various classes of government supplies and equipment.

The practice of the different departments of the Government, before entering into contracts in the first group, is to obtain from the Department of Labour schedules setting forth the current wage rates for the different classifications of workmen required in the execution of the work. These schedules, known as fair wages schedules, are thereupon included by the department concerned in the terms of the contract.

Fair wages schedules are not issued in respect of contracts for supplies and equipment. Contracts in this group are awarded in accordance with a policy which provides that wage rates must equal those current in the district.

A more detailed account of the Dominion Government's Fair Wages Policy is given in the LABOUR GAZETTE for July, 1946, p. 932.

Schedules Prepared and Contracts Awarded During December

(1) ***Works of Construction, Remodelling, Repair or Demolition.***

During the month of December the Department of Labour prepared 69 fair wages schedules for inclusion in building and construction contracts proposed to be undertaken by various departments of the Government of Canada in different parts of the Dominion.

During the same period a total of 95 construction contracts was awarded by the various Government departments. Particulars of these contracts appear in the accompanying table.

Copies of the relevant wages schedules are available to trade unions or other *bona fide* interested parties, on request.

The labour conditions of each of the contracts listed under this heading, besides stipulating working hours of not more than eight per day and forty-four per week, provide that "where, by provincial legislation, or by agreement or current practice, the working hours of any class of workers are less than forty-four per week, such lesser hours shall not be exceeded on this work except in cases of emergency as may be approved by the Minister of Labour and then only subject to the payment of overtime rates as specified by the Minister of Labour", and also specify that the rates of wages set out therein are *"minimum* rates only" and that "nothing herein contained shall be considered as exempting contractors and subcontractors from the payment of higher rates in any instance where, during the continuance of the work such higher rates are fixed by provincial legislation, by agreements between employers and employees in the district or by changes in prevailing rates".

(2) ***Contracts for the Manufacture of Supplies and Equipment.***

Contracts for supplies and equipment were awarded as follows, under the policy that wage rates must equal those current in the district:—

Department	No. of contracts	Aggregate amount
Agriculture	2	$ 214,483.70
Canadian Commercial Corporation	8,897	32,394,106.18
Post Office	13	194,228.51
Public Works	3	35,982.00
R.C.M.P.	4	119,680.00

(3) ***Arrears of Wages***

During the month of December the sum of $1,599.42 was collected from two employers who had failed to pay the wages required by the labour conditions attached to their contracts. This amount was distributed by the Department to the 39 employees concerned.

* The labour conditions of these contracts contain the General Fair Wages Clause providing for the observance of current or fair and reasonable rates of wages and hours of labour not in excess of 8 per day and 44 per week, and also empower the Minister of Labour to deal with any question which may arise with regard thereto.

Recent Regulations Under Provincial Legislation

In Saskatchewan, a revised program of apprenticeship and qualification of tradesmen designed to increase the number of skilled tradesmen in the Province and to improve the quality of workmanship became effective on February 1. New regulations covering 13 designated trades provide for the holding of certificates by apprentices and tradesmen. For the present, however, certification is compulsory in three trades only—barbering, beauty culture and motor vehicle mechanics repair. Beginners', fourth, third and second class certificates will be issued at various stages of training leading to journeyman status. Trade advisory boards, now required to be established for every trade, have wider advisory and appeal powers.

British Columbia Health Act

Shellfish Industry

The Deputy Minister of Health and the Medical Health Officer are given wider powers to conduct investigations in the shellfish industry, by an Order in Council of December 30, gazetted on January 11, which amends the general regulations (L.G., 1949, p. 1124).

Investigations are authorized into the methods used for growing or producing shellfish and the facilities used for handling, storing, shucking and processing them. Samples may be taken for examination purposes. For such purposes, the Medical Health Officer may enter and examine any building, equipment, vehicle, boat or other place or thing. Where unsanitary conditions are found, the operator may be ordered to close down all or part of his business until these conditions are remedied and until permission to reopen has been granted by the Medical Health Officer. For failure to comply with such an order, the operator is liable to penalty.

British Columbia Hospital Insurance Act

The general regulations under the Act (L.G., 1950, p. 1065) were amended with regard to the payment for hospital services rendered by hospitals outside of British Columbia, by an Order in Council of January 8, gazetted on January 18.

Payments will be calculated on the basis of the public ward rate charged by the hospital, as previously, but for new born babies the maximum rate which may be paid is $3 a day. For other beneficiaries the maximum payment remains at $6.50 a day, and in both cases payment will not be made for more than 30 days unless the Minister authorizes a longer period.

British Columbia Factories Act

Correction

An error appeared in the January issue of the Labour Gazette in the review of the Regulations governing moving stairways under the British Columbia Factories Act.

In the first paragraph on page 75 it was stated that an electric motor must not be used as a driving means for more than one moving stairway, and the drive machine must be connected to the main drive-shaft by toothed gearing or a coupling and not by a chain. Instead of the words *and not by a chain* the summary should have read *or must be connected by a chain.*

Manitoba Public Health Act

An amendment was made to that part of the general regulations under the Public Health Act which has to do with Industrial and Construction Camps to increase the amount which may be deducted from the wages of an employee in a mining or lumbering camp, etc., for medical, surgical and hospital care, treatment and medicine. The amendment (50/50) was filed on December 29 and gazetted on January 6.

The general regulations require an employer to enter into a contract with one or more qualified medical practitioners and, if required, one or more hospitals, for medical, surgical and hospital care of his employees, and for regular inspection and supervision of the camp. All contracts must be approved by the Minister.

A maximum of $1.50 per month may now be deducted by an employer whose workmen so agree by passing a resolution by a two-thirds majority vote of the employees present at a meeting specially called for the purpose, or it may be deducted by agreement with the recognized bargaining agent which represents the employees. The authorization for the deduction will not be effective until a certified copy of the resolution and minutes of the special meeting or of the agreement with the bargaining agent is filed with the Minister of Health and Public Welfare.

If no such agreement is made, the maximum amount which the employer may deduct for health services is, as before, $1.

As previously, where work is carried out by a contractor or sub-contractor, the employer may deduct and retain from money payable to him the above amount for each employee and the contractor or sub-contractor may then deduct a similar amount from the pay of his employees.

Quebec Industrial and Commercial Establishments Act

Employees of the Provincial Employment Service are given the same powers as inspectors of commercial and industrial establishments with regard to enforcing the provisions of Part IV of the Act which governs the employment of boys and girls under 18 years. This change was made by a by-law approved by Order in Council (No. 50) of January 11, gazetted on January 27.

The powers of inspectors are set out in Part VII of the Act and include the right to enter industrial and commercial establishments at all reasonable times, to demand the production of records, to hold inquiries when deemed necessary and to make suggestions to the proper authorities in the interest of the health and safety of employees.

Under the Quebec Act, the minimum age for employment in a factory, shop, hotel or restaurant or in messenger or delivery service is 14 years, and for children who cannot read and write fluently (unless they are attending night school) the minimum age is 16 years. Permits are issued by the Provincial Employment Service of the Quebec Department of Labour for employment by 14- and 15-year-olds.

An employer is required to have a certificate of age signed by the parent or guardian for each child under 16 who is working in his establishment. An inspector may ask to see such certificate and may require it to be verified by affidavit. Further, the inspector may request that a child at work in a factory be examined by a doctor, and on the advice of the doctor the child may be discharged as under age or physically unfit.

In order to be employed, a boy or girl under 16 must also have a "certificate of study", to the inspector's satisfaction, and produce it whenever called upon to do so. Parents and guardians must, whenever possible, have the certificates of study verified by the inspector.

Saskatchewan Apprenticeship and Tradesmen's Qualification Act

A complete revision of the general regulations governing apprentices and tradesmen and of the special rules for the various trades designated under the Apprenticeship and Tradesmen's Qualification Act, 1950,[1] was made by an Order in Council of December 12 (O.C. 2128/50), and gazetted on January 13. The regulations became effective on February 1.

The Apprenticeship and Tradesmen's Qualification Act (L.G., 1950, p. 888), which replaces the Apprenticeship Act of 1944, provides authority for the qualifying of tradesmen as well as apprentices. In line with this enactment, the new regulations lay more emphasis on tradesmen's qualification and provide for the upgrading by training of persons already engaged as semi-skilled tradesmen who are not apprentices. The Act stipulates that a person in any city or in the towns of Estevan and Melville and within a five-mile radius of these areas who is required by regulation to hold an apprentice's or tradesman's certificate must not work at his trade without the required certificate. The new regulations now make certification of apprentices and tradesmen compulsory in three trades—barbering, beauty culture and motor vehicle mechanics repair.

The scope of the general regulations has been widened to include the provisions relating to wages in all but the trades of electricians, barbers and beauticians. These were formerly prescribed in the trade rules. Included also in the general regulations are sections dealing with examinations, certification, registration of employers and inspections. The special rules for the

[1] By Proclamation of January 9, gazetted January 20, the list of trades designated in Schedule A of the 1950 Act was revised to include the trade of motor vehicle body repair and to remove the trades of steamfitting, natural gas and petroleum pipe fitting and weekly newspaper printing. The 13 designated trades now listed are bricklaying, carpentering, plumbing, painting, plastering, sheet metal work, electrical, electric arc welding, oxyacetylene welding, motor vehicle mechanics repair, motor vehicle body repair, barbering and beauty culture.

various trades now merely deal with the length of the training period, the ratio of apprentices to journeymen, examination fees and renewals of certificates. The form of the apprenticeship contract is appended to the general regulations.

The principal changes relate to provision for trade advisory boards for each designated trade, the length of the training period for qualification as a journeyman, the granting of time credits to tradesmen and apprentices for previous training, and to the certification of both apprentices and tradesmen. The ratio of apprentices permitted for each journeyman has been made more uniform and the wage scale, still based on a percentage of the journeyman's rate, is now the same for all trades except those of electricians, barbers and beauticians. The length of the class training period for apprentices and the prescribed syllabus of training are no longer set out in the regulations. It is now left to the Director of Apprenticeship, after consultation with the trade advisory board, to prescribe the kind of training each apprentice must undergo.

Trade Advisory Boards and Examination Boards

A trade advisory board or boards, consisting of at least five members and two alternate members, appointed by the Minister, must now be set up for every designated trade. One member, who will act as chairman, must be an inspector and the other members and alternates must be equally representative of employers and workers in the designated trade. The duties of the boards are to assist in establishing or revising trade tests and examinations, training syllabi, and credits to be allowed for time worked at the trade and for trade training and to make recommendations to the Director in any matter concerning apprenticeship or tradesmen's qualification.

Local committees are in operation in a number of the designated trades but previously they were not provided for in the Act or regulations.

As before, the Director may appoint in any designated trade a trade examining board or boards consisting of an inspector and an equal number of employer and employee members or alternate members of any trade advisory board, but the trade advisory board may recommend that the examining board consist of an inspector only, or that an inspector conduct all or part of the examinations in a designated trade. When an application of an apprentice or tradesman for a certificate of status in any trade is placed before it, the examining board must examine the application; recommend to the Director which applicants should be granted a certificate of status without examination; examine every applicant referred to be examined; make recommendations to the Director concerning the status of every applicant and send to him all such recommendations, together with all examination papers, applications and related documents.

Length of Training Period

The minimum number of hours which must be worked in the various designated trades by any person before he may be granted a journeyman's certificate is set out below and includes the three months' probationary period and time credits for appropriate trade training.

	Minimum Number of Hours
Plumbing Motor vehicle mechanics repair	10,000
Carpentry Sheet Metal Electric Arc welding* Oxyacetylene welding* Electrical Motor vehicle body repair	8,000
Bricklaying Plastering Painting	6,000
Barbering Beauty Culture	4,000

*A person qualified in one class of welding may obtain a certificate in the other class after only 2,000 hours.

Under the former regulations, the training period, which applied only to apprentices, ranged from 4,000 hours to three, four or five years (except in barbering and beauty culture where the term was 18 months), with provision for a reduction for specialized training.

Rates of Pay

In all trades except barbering and beauty culture, during the first 1,000 hours of the apprenticeship period an apprentice must receive the greatest of three amounts: (1) 50 cents an hour or (2) 40 per cent of the journeyman's prevailing hourly rate or (3) 40 per cent of the average hourly rate currently being paid to the journeymen in the trade by his employer. Thereafter, on the completion of each subsequent 1,000 hours, the apprentice's wages must be increased by reasonably equal amounts until at the commencement of the last 1,000 hours of apprenticeship he is receiving at least 90 per cent (75 per cent in the electrical trade) of the prevailing journeyman's rate or of the rate paid by his employer to journeymen employed in the trade, whichever rate is greater.

Time and one-half his regular wage rate must be paid for all time during which an apprentice is required to work or be at the disposal of his employer in excess of the prevailing hours fixed by the Director of Apprenticeship.

In the barbering trade, no contract of apprenticeship may provide for wages less than $18 a week for the first six months of apprenticeship; for the second six months an apprentice must receive $18 a week *or* 50 per cent of his gross earnings, whichever amount is greater; during the third six months he must receive the greater of either $21 a week *or* 55 per cent of gross earnings; and during the final six months' period $25 a week *or* 60 per cent of gross earnings, whichever is greater.

Wage rates in beauty culture must be not less than:—

1st 6 months.....$18
2nd 6 months..... 18
or,
if greater, 40 per cent of apprentices's gross earnings for work on permanent waves or 60 per cent of his gross earnings in all other work.
3rd 6 months.....$21
or
as for 2nd 6 months.
4th 6 months current minimum wage
or
as for 2nd 6 months.

Under the former rules for barbers and beauticians the rates were lower than the above and varied according to whether the apprentice was employed in the cities and towns or in the rest of the Province. Previously, in these trades no wages were paid during the first six months of the apprenticeship period (L.G., 1947, p. 61).

Ratio of Apprentices to Journeymen

A ratio of one apprentice for every three journeymen employed by an employer is now fixed for all trades except the electrical and sheet metal trades. The number of apprentices permitted in the electrical trade remains at one for every journeyman, and in the sheet metal trade one for every two journeymen employed. If however, an employer employs fewer than the number of journeymen prescribed, but at least one journeyman, he may engage one apprentice. Where an employer employs no journeymen but is himself a journeyman, he may employ one apprentice.

Certificates of Status

Every tradesman engaged in barbering, beauty culture and motor vehicle mechanics repair in and within a five-mile radius of cities and the towns of Estevan and Melville is required to hold a certificate of status. The certificate issued to an apprentice must indicate that the holder has the status of a beginner, fourth, third or second class apprentice. The certificate of a person other than a registered apprentice must indicate a status equivalent to the above-mentioned classes, or the status of journeyman.

For a certificate of second class status 75 per cent of the total number of hours required for journeyman's status in the trade must be worked; for third class status, 50 per cent; and for fourth class status, 25 per cent. In addition, the minimum marks required by the Director for such status must be obtained in any examination taken.

Where a person has obtained appropriate trade training or has worked in the trade, the minimum period required to obtain a certificate of status may be reduced by a time credit granted by the Director.

A certificate of journeyman's status in any designated trade may be issued without examination provided that the person completed the total time required before January 1, 1945. The same fee must be paid for the certificate as if an examination were taken. However, the employer, a trade examining board, or a trade union which has membership in the trade in question, may apply to the Director requesting that such person take an examination and giving reasons for this request. After consultation with the examining board, the Director may require the person to undergo an examination and pay the necessary fee and his certificate of status may be revoked if he fails to do so without good cause.

A person required to hold a certificate of status who has not had the opportunity to take an examination, or who has good reason for not doing so, may be granted a permit or temporary certificate of status, effective for 30 days after the date on which he is notified that he must be examined.

Except in the case of an appeal, six months must elapse after a certificate of status is issued or an examination taken before a person may take a further examination to improve his status or before another certificate of status may be issued. However, at any time during the last six months of the minimum training period required to obtain journeyman's status, an apprentice or tradesman may apply for a journeyman's certificate. Such person will be notified of the result of the examination but he will not be given his certificate until he completes the minimum training period.

Notice of appeal against the status granted by an examination may be filed with the Director by any person within

nve days after receiving his certificate. The Director must refer the appeal to an examining board other than the original board to inquire into the matter and, after receiving its recommendation, he may decide the action to be taken. A fee of $25 must be paid if the appeal is granted, in addition to the fee for any examination taken as the result of the appeal. However, the fee for appeal will not be required if, as a result of the appeal, the person is granted a certificate of higher status. The fee for a special oral examination is $25.

The regular examination fee for beginners in all trades is $1 and for others in every trade but motor vehicle repair and plumbing, $5. In the latter trades the fees are as follows: motor vehicle repair, $10; plumbing, $5 for a theoretical examination, $2 for a blueprint examination, $8 for a practical examination if only tools are furnished by the candidate, and $4 if both tools and material are furnished.

Certificates of status are valid for two years from the date set for their renewal which is August 1 for carpentry, bricklaying, plastering and painting; September 1 for plumbing, sheet metal, electric arc welding and oxyacetylene welding; July 1 for the electrical, motor vehicle mechanics repair and motor vehicle body repair trades; and October 1 for barbering and beauty culture.

In the motor vehicle mechanics repair, barbering and beauty culture trades in which the holding of a certificate is compulsory, certificates must be renewed within 30 days of the renewal date, the fee for which is $4. If, however, a person in these trades has been examined at least six months prior to the expiry date of his certificate, renewal will be unnecessary.

Any certificates of qualification or interim certificates which are in effect on February 1, 1951, will remain in force until the due date for renewal fixed in the regulations for the particular trade.

A journeyman's licence issued under the authority of the Electrical Inspection and Licensing Act will, during the period of its validity, be deemed to be a valid certificate of journeyman's status under these regulations (L.G., 1949, p. 742).

A holder of a certificate of status who has not engaged in the trade for a continuous period of two years or more may, on the recommendation of the nearest examining board, and with the approval of the Director, be required to write an examination in the trade. If he fails to do so, the Director may refuse to renew his certificate or may cancel it.

Other provisions in the regulations govern identification cards for apprentices and tradesmen, employers' certificates of registration, and inspection.

The Director must now furnish an identification card to every registered apprentice and to each tradesman examined in a designated trade (formerly only to apprentices). In the barbering, beauty culture and motor vehicle mechanics repair trades, the holder is required to carry his card at all times and produce it for inspection by a prospective employer, by a person for whom he is performing work or by an inspector.

As before, every employer in a designated trade must be registered during the first thirty days of each year, the fee for which is $2, with an additional $2 for each one of the average number of tradesmen employed by him during the preceding calendar year. When applying for registration, the employer must furnish the Director with any information which he may require concerning the number of apprentices employed.

The employer's certificate of registration must be posted in a conspicuous place in his establishment. Persons engaged in the three trades where certification is compulsory are also required to post their certificates in their usual place of employment.

The Director must arrange for periodic inspections to be made of the training of apprentices and tradesmen in any designated trade. The employer is required to produce for inspection any records pertaining to tradesmen, or to the hours of work or wages of apprentices.

Saskatchewan Hospitalization Act

The annual list of hospital services for which payment may be made under the Act was approved by Order in Council 70/51 on January 12 and gazetted on January 20. The regulations, which are effective from January 1, 1951, are divided into two parts: benefits in Saskatchewan hospitals and benefits in hospitals outside Saskatchewan.

Similar to those provided under the Act in previous years, the list of services includes public ward accommodation, operating and caseroom facilities, surgical dressings, X-ray and other diagnostic procedures, anaesthetic agents, drugs and endoctrine and vitamin preparations.

Out-of-province benefits may be paid for beneficiaries up to an average maximum of $5 a day. Payment is for a maximum of 60 days except under certain circumstances. No payment may be made for a patient in a mental hospital, sanatorium or hospital providing treatment for arthritic and rheumatic conditions.

Legal Decisions Affecting Labour

Picketing was restrained by an injunction issued by the Court of Appeal in British Columbia and damages were awarded to the company whose premises were picketed. The effect of revocation of the charter of a local union upon ownership of property was clarified by the British Columbia Supreme Court. In an action before the Quebec Appeal Court, the Workmen's Compensation Commission failed to prove a third party liable in an accident to a construction worker. In Ontario, in an action for damages against an employer under Part II of the Workmen's Compensation Act, a clean-up man in a department store was held to come within the Act, not being a domestic or menial servant within the meaning the Act, but failed to prove negligence. The Ontario High Court of Justice continued an injunction against improper picketing. Orders of the Saskatchewan Labour Relations Board requiring reinstatement of employees were held invalid by the Saskatchewan Court of King's Bench.

Appeal Court finds picketing in Vancouver restaurant case illegal under British Columbia Industrial Conciliation and Arbitration Act.

A decision of the British Columbia Court of Appeal given November 17, 1950 extended an injunction against "sandwich board" picketing by a restaurant employees' union in front of three units of a Vancouver chain of restaurants, and awarded the employer damages for the loss suffered.

Aristocratic Restaurants (1947) Limited operated five restaurants in Vancouver as separate units. In September, 1949, the Hotel and Restaurant Employees International Union, Local 28, was certified by the Labour Relations Board as bargaining agent under the British Columbia Industrial Conciliation and Arbitration Act for the employees of one of the five restaurants known as unit 5. Difficulties arose in the negotiation for an agreement, and the conciliation provisions of the Act were invoked. A conciliation board was appointed, which brought in its report in February, 1950, the union representative filing a minority report. The chief difference was that the majority report did not recommend a union shop clause. The board found that at the time of its sittings there were no longer any members of the union employed in unit 5, and held that since the union was unable to supply the necessary help there was no justification for a union shop clause in the proposed collective agreement. Under the Act a union once certified as the bargaining authority remains the bargaining authority for a period of ten months after certification even if it is no longer representative. The conciliation board report was not submitted to the employees for acceptance or rejection.

Three months after the board had reported, the union had three of the restaurants picketed, unit 5, for which it was the certified bargaining agent, and also units 6 and 7. No employee in any of the three units was then a member of the union. The picketing was done by two men, who were not restaurant employees, carrying large placards bearing the words: "Aristocratic Restaurants have no union agreement with Hotel and Restaurant Employees International Union, Local 28, affiliated with Vancouver and New Westminster Trades and Labour Council."

On May 18, 1950, the company commenced an action in the Supreme Court of British Columbia against the president and secretary of the union as representing the membership of the union as well as against the union. The cause of action alleged was conspiracy to cause the company's premises to be watched and beset for the purpose of compelling the employer to enter into an agreement with the union, which the company was under no lawful compulsion to do. The company alternatively claimed damages for a nuisance created by the defendants, their servants and agents. Judgment was reserved until September 13, when an injunction was granted restraining the union "from establishing a line about the plaintiff's place of business and from stating to prospective patrons that there is a picket line about

the said place of business", but dismissing the action in all other respects. The practical effect was to hold legal the picketing as conducted.

The restaurant company appealed this decision. The Appeal Court, in the judgment delivered by Mr. Justice O'Halloran on November 17, 1950, reversed this decision, extended the injunction against the picketing, and awarded damages to be assessed by the trial court if the parties could not agree. Mr. Justice Smith concurred in the decision, giving separate reasons for judgment. Mr. Justice Robertson dissented. On December 20 leave was given to the union to appeal to the Supreme Court of Canada.

In giving his reasons for decision, Mr. Justice O'Halloran first distinguished between the picketing at units 6 and 7 and the picketing at unit 5. In respect to unit 5 the union was the certified bargaining agent but in respect to units 6 and 7 the union "must be regarded as a gratuitous intervener." He would therefore allow the appeal at the outset as it affected units 6 and 7. However, the reasons which follow, while they relate specifically to picketing at unit 5, would also be applicable to units 6 and 7.

He then examined the applicability of Sections 3 and 4 of the Trade-unions Act to the picketing in this case, and differed from the conclusions of the trial judge, who had found the picketing sanctioned by Section 3. Section 3 reads:—

> 3. No such trade-union or association shall be enjoined, nor shall any officer, member, agent or servant of such trade-union or association, or any other person be enjoined, nor shall it or its funds or any such officer, member, agent, servant or other person be made liable in damages for *communicating* to any workman, artisan, labourer, employee, or person facts respecting employment or hiring by or with any employer, producer, or consumer or distributer of the products of labour or the purchase of such products, or for *persuading or endeavouring to persuade* by fair or reasonable argument, without unlawful threats, intimidation, or other unlawful acts, such last-named workman, artisan, labourer, employee, or person, *at the expiration of any existing contract*, not to renew the same with or to refuse to become the employee or customer of any such employer, producer, consumer, or distributer of the products of labour.

He found Section 3 not applicable because "it is plainly limited . . . to a situation present 'at the expiration of any existing contract' which is certainly not the case here." Moreover, "customer" is not a wide enough term to extend to the public at large, and "communicating", "persuading" or "endeavouring to persuade" are comparatively mild words which cannot cover the action of an organized labour patrol with signs marching up and down in front of a restaurant.

Section 4 of the Act reads:—

> 4. No such trade-union or association, or its officer, member, agent, or servant, or other person, shall be enjoined or liable in damages, nor shall its funds be liable in damages, for *publishing information with regard to a strike or lockout, or proposed or expected strike or lockout, or other labour grievance or trouble*, or for *warning workmen, artisans, labourers*, or *employees or other persons* against seeking, or *urging* workmen, artisans, labourers, employees, or other persons not to seek, employment *in the locality affected* by such strike, lockout, labour grievance or trouble, *or from purchasing*, buying, or consuming products produced or distributed by the employer of labour party to such strike, lockout, labour grievance or trouble, during its continuance.

Following the reasoning in *Hollywood Theatres Ltd.* v. *Tenney* (L.G., 1940, p. 308) he found that what took place here was not sanctioned by Section 4 because (*a*) it occurred "at or near" the appellant's restaurant in an organized manner in the form of a patrol that announced its powerful organized labour action, and (*b*) the immunity recognized by Section 4 does not extend to "warning" and "urging" by an organized militant patrol that carries inherent moral coercion or intimidation with it, or is directed to all prospective customers of the restaurant.

The case is governed by the Industrial Conciliation and Arbitration Act. He pointed out that what is said in this judgment in respect to the Act refers to picketing before a strike or during an illegal strike. Picketing during a legal strike is something else. If after the presentation of the conciliation board report, a strike vote had been taken and a majority vote favoured a strike, then the picketing that was done here could have claimed immunity within Section 4 of the Trade-unions Act. No strike vote was taken, and His Lordship held that the picketing which took place would come within the prohibition of activity which limits production as set out in Section 5 (2) of the Industrial Conciliation and Arbitration Act:—

> No labour organization and no person acting on behalf of a labour organization and no employee shall support, encourage, condone, or engage in any activity that is intended to restrict or limit production.

He concluded that if picketing restricts or limits production, then it comes within the kind of activity Section 5 (2) has in mind.

The trial judge had found as a fact that the restaurant's business was decreased as a result of the picketing. Mr. Justice O'Halloran continued:—

> Picketing before a strike is in essence a public threat of strike. Its role in the public mind then is that of an initial step in a likely strike. . . . If picketing is sought to be used as a weapon it is a form of strike; when used as a shield it is a natural concomitant of a legal strike.

He referred next to an unreported decision of June 13, 1950, *Arsens* v. *Hotel and Restaurant Employees Union, Local 459*, in which the British Columbia Supreme Court granted an injunction restraining picketing during a strike which was illegal because the provisions of the Industrial Conciliation and Arbitration Act had not been complied with, and went on to say:—

> I think that decision was necessarily based on the premise that, before picketing, otherwise legal, can be engaged in, there must be some legal foundation for it under the I.C.A. Act. For example, if a legal strike has been voted for under Section 33 of the I.C.A. Act, then the provisions of the latter Act are exhausted and picketing is legal, if the form of picketing comes within the Trade-unions Act. But if a strike vote had been taken and a majority are opposed to a strike, any form of picketing must then be illegal. It is an essential part of this reasoning that picketing in any form must be illegal if it occurs before a vote is taken favouring a strike . . .
>
> Generally speaking, as I understand it, it is the purpose of the I.C.A. Act (1) to outlaw strikes until the machinery of compromise (bargaining agents, conciliation officer and conciliation board, etc.) has been invoked and exhausted; a legal strike can then take place only upon a majority vote of the employees; and (2) that until all this machinery has been gone through there shall be no interruption of business by tactics of any kind leading to interference, delay or public opprobrium. In my judgment that is the reason for Section 5 (2). "Picketing" such as occurred here, by its very nature, comes squarely within this prohibition . . .

By its picketing here the union was attempting to force the employer to alter a term or condition under which its employees were employed. Section 16 (*b*) of the Industrial Conciliation and Arbitration Act provides that an employer shall not *(inter alia)* "alter any term or condition of employment" until a conciliation board has reported to the Labour Relations Board

> and until the question of the acceptance or rejection of the report of the Conciliation Board has been submitted to a ***separate vote*** of the employers and the ***employees affected*** respectively and seven days have elapsed after the result of the vote has been notified to the Labour Relations Board.

Here the majority report of the conciliation board was never submitted to the employees for their acceptance or rejection. For this reason as well as those already discussed, he concluded that the picketing was illegal and the appeal should be allowed.

The dissenting judgment of Mr. Justice Robertson held that under common law and under the Trade-unions Act the picketing here was lawful. In respect to the argument that picketing is in effect prohibited by Section 5 (2) of the Industrial Conciliation and Arbitration Act, which prohibits any activity intended to restrict or limit production, he quoted the whole section and held that it relates to things taking place in the employer's place of employment and has no relation to picketing. He pointed out that there are a number of activities that might be engaged in by employees within their place of employment with the intention and having the effect of restricting or limiting production, e.g., by wasting time, or doing less than a normal amount of work, or putting obstacles in the way of production, or damaging property or machinery.

> My view is that, if the Legislature intended to deprive the trade unions of the protection afforded by the Trade-unions Act since 1902 by Chapter 66 of that year, it would have made this perfectly clear by express language and not by implication.

Aristrocatic Restaurants (1947) Limited v. *Williams and Morrison et al*, [1950] 2 WWR, p. 1105.

Revocation of local union's charter by national organization held to cause the local to be defunct. Funds and property revert to parent organization in accordance with constitution.

On April 14, 1950, Chief Justice Farris of the Supreme Court of British Columbia made permanent an injunction restraining members of Local No. 1 of the Amalgamated Building and Construction Workers of Canada from using the funds and property acquired by the local when it was affiliated with the national union.

Mr. Justice Farris summed up the facts as follows:—

> A charter was granted by the Amalgamated Building and Construction Workers of Canada to a local union in British Columbia which became known as Amalgamated Building and Construction Workers of Canada, Local No. 1. The union came in default in 1948 and on May 19 of that year its charter was revoked. Subsequent to the revocation of the charter, a majority of the members attempted to carry on the

union, and by a majority vote, decided to obtain a charter from the American Federation of Labour, a rival of the organization which had granted the charter.

The officers of the group whose charter had been revoked acted as if the original union had continued to exist, and attempted to use the original union's funds, furniture, etc. Lakeman and Barrett, suing for themselves and the national body, applied for an injunction to prevent this group, represented by Bruce, from using the union's funds pending trial. An interim injunction was granted, from which an appeal was taken to the British Columbia Appeal Court and dismissed.

Mr. Justice Farris referred to Section 24 of the constitution of the Amalgamated Building and Construction Workers of Canada which states:—

> When the Local Union becomes defunct, its funds and other property shall revert to the Amalgamated Building and Construction Workers of Canada.

The plaintiffs' argument was that on May 19, 1948, the local union had ceased to exist and its funds and property had automatically reverted to the parent organization. The defendants argued that revocation of the charter by the national body in no wise rendered the local union extinct. They further stated that as the union had had an independent status prior to its association with the national body, severance of the association was merely revoking a technical tie and did not condemn the union to extinction.

Mr. Justice Farris referred again to the constitution of the parent body and noted that the provisions under the heading of "Local By-laws" stated:—

> 1. Membership. Any body of ten or more workers in the building and construction industry may, at the discretion of the National Executive Committee, be granted a charter as a Local Union. Application for such charter should be made to the National Secretary-Treasurer of the Union, accompanied by the initiation fees in full. No Local Union may surrender its charter while there are ten continuing members.
>
> 2. Jurisdiction. When a charter is granted to a Local Union, the jurisdiction of the Union, with respect to territory, and as otherwise deemed necessary, shall be defined by the National Executive Committee, or the District Council where such exist.

He concluded that no union in existence had to write to apply for affiliation with the national organization. A group of ten could apply for a charter and upon being granted it, become the local union. Thus, when the charter was revoked by the parent body the local union no longer existed. He accordingly ruled that

> Local No. 1 became defunct as of May 19, 1948, and that pursuant to Section 24 of the constitution quoted *supra,* all the funds and other property of Local No. 1 reverted to the Amalgamated Building and Construction Workers of Canada. The injunction will be made permanent.

Lakeman and Barrett v. *Bruce et al* (No. 2) [1950] 2 WWR, p. 1209.

Quebec Appeal Court upholds Lower Court in finding third party not liable for damages in compensation case.

The Quebec Court of King's Bench, appeal side, on June 6, 1950, dismissed the appeal of the Quebec Workmen's Compensation Commission from the decision of the Superior Court of Quebec, given January 26, 1949, in an action by the Commission against the Quebec Power Company. The Superior Court found that the Quebec Power Company was not liable in an accident which caused the death of a construction worker, and the Appeal Court upheld this decision.

The Commission took the action in accordance with its powers under Section 7 of the Workmen's Compensation Act, which permits the Commission to sue a third party alleged to be responsible for an accident. Where an accident happens to a workman in the course of his employment under circumstances which entitle him or his dependents to an action against some person other than his employer, the workman or his dependents may elect either to claim compensation under the Act or to bring action against the third party. If the workman or his dependents choose to claim compensation, the Commission is subrogated to the full rights of the workman or of his dependents; that is, it may sue in their place to the full extent of their rights. In this case after the Commission had fulfilled its obligations towards the construction worker's widow, a legal action was instituted against the Quebec Power Company.

In his reasons for judgment, Mr. Justice Pratte stated that the Commission had not established that the Company was responsible for the accident. The facts were that on September 25, 1943, a construction worker was electrocuted by touching a live wire while working on the edge of a roof that was being elevated to provide another storey for a building. The Company had previously removed from the proximity of the construction work, upon the request of the contractor, the live wires that at the time were in the way of the construction work. The Company made an offer to remove any other wires that might be in the way, but the contractor did not avail himself of the offer.

There was no evidence that the Company could have foreseen that the repair work would be carried out to one foot from the primary wires, and the Company was in no way wrong in not modifying its lines to a greater extent.

The plaintiff argued also that the Company was at fault under Section 1054 of the Civil Code which makes the guardian of an inanimate object responsible for the damages it may cause. This argument was not accepted, because the Judge held that that section applies only when the damage has been caused by the independent action of the object. This accident occurred because the victim touched the live wire.

Mr. Justice Casey, giving separate reasons for judgment, held that before the work was commenced there was nothing abnormal nor dangerous in the position of the Company's wires. Their position was rendered dangerous by the changes made in the building. He found that the plaintiff had not succeeded in establishing that the defendant knew or should have known the extent of the proposed alterations.

The appeal was accordingly dismissed. *Commission des Accidents du Travail de Québec* v. *Quebec Power Company,* Rapports Judiciaires de Québec, [1950] BR Montreal, No. 9, p. 704.

Ontario High Court dismisses action against employer for damages for negligence of a fellow employee. Clean-up man in commercial organization is not a domestic servant within the meaning of the Workmen's Compensation Act.

On June 19, 1950, the Ontario High Court of Justice dismissed with costs the action of a clean-up man in a department store for damages against his employer as a result of a badly lacerated finger alleged to be caused by negligence on the part of a fellow employee.

The business of a department store is excluded from Part I of the Workmen's Compensation Act, i.e. the collective liability system under which no right of action against the employer is allowed. Under Part II of the Act, which applies to industries to which Part I does not apply, a workman may sue his employer for injury received in an accident caused by the employer's negligence or that of any persons employed by him, or by a defect in the machinery or plant.

The plaintiff was, at the time of the accident, an employee of the defendant company as a night clean-up man assigned to a section of the store which included a stock-room connected with the bedding department. He suffered a severely lacerated finger when, on September 7, 1946, in removing waste paper from the floor, he caught his finger on a metal strap used as binding on a partially emptied bale of bedding which was left under the waste paper by clerks who, in the course of their duties, had taken stock from the stock-room.

In summing up the evidence, Mr. Justice Schroeder stated that the plaintiff did not impress him as a reliable witness. He had asserted that during the time he had worked for the defendant he had never seen metal bands on the floor or bales on the floor with their straps severed. On the contrary His Lordship found this to be a common occurrence. Mr. Justice Schroeder found that the plaintiff was most astute in his efforts to present the evidence in such a manner as to excuse his failure to observe the exposed metal bands, the presence of which he ought to have suspected.

> If he waded into a huge bale of paper without assuring himself by as much as a touch of his foot that there was a bale of bedding underneath which might have been opened, he was most assuredly not exercising the proper degree of care for his own safety.

In dealing with this question of liability of the company for the negligence of its servants, His Lordship considered the question of whether or not the plaintiff was entitled to take advantage of the benefits conferred by Part II of the Workmen's Compensation Act.

Mr. Justice Schroeder first pointed out that if the plaintiff were compelled to rely only upon his rights at common law, he might be considered as running all the risks arising from the nature of his master's business and all the risks arising from the negligence of his co-servants. Furthermore, if it could not be established that the servant was ignorant of the existence of the danger, he would have no right of action. Unless the plaintiff comes within the classification of a domestic or menial servant, His Lordship continued, he enjoys the benefits and advantages conferred on workmen by Sections 120 to 124 (Part II) of the Ontario Workmen's Compensation Act under which certain common law rules have been abrogated, as for example Section 121 (4), which provides that:—

> A workman shall not by means only of his continuing in the employment of the employer with knowledge of the defect or negligence which caused his injury be deemed to have voluntarily incurred the risk of the injury.

The Act is declared not to apply to domestic or menial servants or their

employers. Counsel for the company contended that the plaintiff was a menial servant and as such not entitled to the protection of Part II of the Act. He argued that this section exempts from Part II persons who perform services of such a nature that if they were performed in a domestic establishment they would place the person performing them in the category of a domestic or menial servant.

His Lordship, in commenting on this assertion, found, in reviewing the applicable cases, that it has not yet been authoritatively determined in Ontario and is still an open question

> whether Section 124 of the Act extends to a person engaged in the service of an employer in connection with the operation of a commercial industry, although such person is performing services, the nature of which is such that if they were performed in a household or domestic establishment they would constitute him a domestic or menial servant. . . .

He concluded:—

> I am decidedly of the opinion that the terms "domestic servant" and "menial servant", taking into account their origin and history and the meaning ascribed to them for so long a time, denote hirelings employed in service in and about the house and household affairs, or whose business it is to assist in the economy of the family, and to extend the meaning of these words to apply to persons hired in the service of a commercial organization where they are far removed from the family atmosphere, in my opinion, would do gross violence to the language used in the section under consideration, and would give to such words a meaning which was never within the contemplation of the Legislature. I am bound to hold, therefore, that the plaintiff is not a menial servant and is not deprived of the benefits or advantages conferred upon a workman standing in the same relationship to his employer as does the plaintiff by the Workmen's Compensation Act.

His Lordship then continued that, since the plaintiff's claim against the defendant rested upon his assertion that a servant of the defendant was guilty of negligence which resulted in his injury, then if he fails to establish such negligence the action must fail.

Mr. Justice Schroeder then listed the three ingredients which must co-exist before a course of action for negligence may be said to arise: (*a*) The existence of a legal duty to take care, owed by the defendant to the plaintiff; (*b*) the breach of that duty by the failure of the defendant to take such care as a reasonable man would have taken; (*c*) damages suffered by the plaintiff as a result of the breach.

His Lordship held that there was nothing in the evidence to establish a relationship between the plaintiff and those employees of the defendant from which a special duty to take care arises. The co-employees were not required to guard against every conceivable result of their actions, nor were they bound to take extravagant precautions. They were reasonably entitled to assume that the plaintiff, with the knowledge which he possessed, or which, having regard to his experience, he ought to have possessed, would to a reasonable extent, take care to look out for himself and take proper steps to avoid known risks. It must not be overlooked, continued His Lordship, that the plaintiff was injured while picking up for removal, something which it was his duty to pick up and remove; the risk involved was no more than one of the ordinary risks incidental to his employment.

Mr. Justice Schroeder concluded:—

> On all the evidence I must hold that the plaintiff has not made out a case for negligence against any of his fellow servants and it follows logically that he has not made out a case against the defendant. In the view I take of the facts, he is the author of his own misfortune and the action must be dismissed.

In case the plaintiff should pursue his remedy in a higher court, Mr. Justice Schroeder assessed the damages which the plaintiff should be awarded if his action were to succeed at $3,315.85.—*Endersby* v. *Robert Simpson Co. Ltd.*, [1950] 4 DLR, p. 459.

Injunction restraining picketing continued in modified form by Ontario High Court of Justice.

A motion by the Belleville Lock Co. Ltd. to continue an interim injunction restraining some of its employees from picketing the company's premises was heard by the Ontario High Court of Justice, November 1, 1950. The interim injunction restrained the defendants, "their agents, servants or any persons interfering under their instructions" from

> (*a*) *Picketing or attempting to picket at or adjacent to the premises of the Plaintiff in the City of Belleville, in the County of Hastings*, and from improperly interfering with the employees of the Plaintiff by preventing or attempting to prevent by use of force, threats and intimidation *and persuading* or coercing said employees from entering or leaving plaintiff's premises;
>
> (*b*) Intimidating or threatening harm or in any way interfering with servants, employees, patrons or customers of the Plaintiff or any other person seeking passive entrance to or exit from said Plaintiff's place of business;
>
> (*c*) Ordering, aiding, abetting, counselling, procuring or encouraging in any manner whatsoever whether directly or indirectly any other person or persons to commit the aforesaid acts.

The facts relevant to the motion were that on September 26, 1950, some of the

employees of the company desired to have an officer of the company address them and gathered in a part of the company's premises. The officer did not address them, and further activities took place in the afternoon to promote an employer-employee contact, as a result of which the employees were not at work. The following morning they were discharged for not being at work.

Mr. Justice Smily said that it did not appear to him from the facts before him that the action taken on September 26 constituted a strike within the meaning of the Ontario Labour Relations Act, 1950, which prohibits a strike while a collective agreement is in operation, although it might be a breach of some of the terms of the agreement. That being so, the defendant should not be restrained from peaceful picketing. "I assume I should not continue the injunction," the judge said, "unless I feel that a *prima facie* case has been made out for a legal basis against the right of individual persons properly to picket the premises of the plaintiff company." While he did not see that the injunction restraining all picketing should be continued, he considered that there was sufficient material to show that some restraint should be continued until the trial. He therefore continued the injunction in modified form, by omitting the italicized words in the injunction quoted above, being that part of the order restraining peaceful picketing.—*Belleville Lock Co. Ltd.* v. *Tyner et al,* [1950] OWN, p. 793.

Orders of Labour Relations Board requiring reinstatement of employees held to be discharged for union activity quashed by Saskatchewan Court.

The Saskatchewan Court of King's Bench on November 7, 1950 quashed two Orders of the Saskatchewan Labour Relations Board requiring the Providence Hospital, Moose Jaw, to reinstate three women employees whom the Board had held to have been discharged because of union activities. This action was taken on an application of the Sisters of Charity, Providence Hospital, for a writ of *certiorari*.

[The two Orders of the Labour Relations Board which were reviewed by the Court in this case were dated January 12, 1950 and March 17, 1950. In its reasons for decision, the Board indicated that previous to the first Order, the Textile Workers Union of America, Local 750, CIO-CCL, had alleged to the Board that in discharging three women employed in the laundry of the hospital, the employer had committed an unfair labour practice within the meaning of Section 8 (1) (*e*) of the Saskatchewan Trade Union Act, 1944. Statutory declarations were filed with the Board by the three discharged employees and also by the employer. Section 8 (1) (*e*) of the Act provides in part:—

> . . . if an employer or employer's agent discharges an employee from his employment and it is alleged by a trade union that such employer or employer's agent has thereby committed an unfair labour practice within the meaning of this clause, it shall be presumed, unless the contrary is proved, that such employer or employer's agent has discriminated against such employee in regard to tenure of employment with a view to discouraging membership in or activity in or for a labour organization or participation in a proceeding under this Act.

The Board concluded that the replies made by the employer fell short of the case made out by the union, that the three employees were dismissed because of their known union activities. The application was granted in each case with an Order for reinstatement and payment of monetary loss. The second Order was made by the Board on March 17, 1950, following allegations that the employer had re-engaged the three women, but had immediately discharged them on payment of one week's pay in lieu of notice.]

In giving the reasons for the Court's decision to quash the Orders, Mr. Justice Taylor said it was based on three main reasons: first, the Board attempted to exercise a jurisdiction over the religious charity that it did not possess; second, even if it had jurisdiction the complaints were not made by any person or union having a right to set the proceedings in motion such as to give it jurisdiction; and third, the method of inquiry was "fraught with omission and error and the Board neglected its plain duty to properly inquire into and truly ascertain the facts."

With regard to the question of the Board's jurisdiction over the hospital, Mr. Justice Taylor stated that the Board had taken no account of the fact that the hospital was a religious institution confined to work of charity and benevolence and incorporated by a special act of incorporation in 1913. This corporate hospital was enabled to sue and be sued, but he held that "it does violence to the language used to subject the corporation to the process of the Board, the existence of which was not even in contemplation when the special act was passed". He concluded that the Board has no jurisdiction over the applicant whatsoever and for that reason, if no other existed, the Orders made were ineffective and should be set aside.

Secondly, he considered that the Board had reached "an astounding conclusion in

holding that a trade union not affected by the matter in dispute or in any way howsoever interested may lay the charge". He continued:—

> It is conceivable that some trade union perhaps as the bargaining agent of the employees holding a contract with the employer or in some such capacity may have a direct interest in the discharge of the employee. The purpose of the section is to confer on such a union a status to apply to the Board. Any other conclusion would result in throwing open the door to a form of barratry and chicanery such as is found in this case.

Moreover, on examination of the record of the Board's proceedings he found that the charges against the hospital were all made on the responsibility of one man, using the name of the union and signing the charge as its representative. The Board made no inquiry into the existence of the alleged union which made the charges in question, or into what interest the union had in the proceeding or as to whether there had been any resolution of the union authorizing the proceedings or appointing a representative to act for it.

Mr. Justice Taylor then dealt with the contention of the Board that on the filing of the information or complaint verified by statutory declaration by a trade union, the onus was shifted by Section 8 (*e*) of the Trade Union Act to compel the employer to disprove the charge. He considered that the presumption of the reverse onus clause in the Act is that the employer has discriminated against the employee in regard to "tenure of employment". The onus of proof could be deemed reversed only when it is established that the dismissed employee had in fact a tenure of employment, and could not refer to casual employees such as the three women were. He therefore concluded that "the Board misinstructed itself on the meaning of this so-called 'reverse onus' rule, and no matter how wide a discretion was conferred upon it in the reception of evidence otherwise in law regarded as without probative value, no facts had been elicited when the ruling was made or were afterwards disclosed to justify the application of the rule."

Regarding the Board's method of conducting the inquiry, His Lordship stated that the Board held that it had power to accept any kind of evidence in its discretion, and it exercised its discretion to receive hearsay complaint against the hospital, but passed over the statutory declaration of the Sister Superior who alone knew what actuated her in discharging the employees, and the counsel for the hospital had been refused permission to cross-examine those who had filed declarations. Moreover, all the proceedings had been taken without regard to or notification of the other employees in the laundry. They had a real interest and employed counsel and applied to the Board for a rehearing and a discharge of the Order. The material filed by them directly controverted that on which the Board had relied to make its Orders. In refusing the application the Board had acted dictatorially without regard to the justice of the matter.

The Court therefore held "that in lieu of a writ of *certiorari* an order will go quashing the orders as prayed in the notice of motion on this application. The applicants are entitled to costs against the Board to be taxed."—*In re Sisters of Charity Providence Hospital and Labour Relations Board (Sask.) et al,* [1950] 2 WWR, p. 1046.

Labour Relations Board Ruling

The Manitoba Labour Relations Board, according to its report for the month ending December 15, 1950, ruled that an employer member of an employers' association which is party to a collective agreement is still bound by the agreement even if he resigns from the association.

The parties concerned were a member of the Winnipeg Builders Exchange and Local Union 343, United Brotherhood of Carpenters and Joiners of America. The Union asked for a ruling of the Board in the following case:—

> Is it permissible under the Manitoba Labour Relations Act, in accordance with Section 19, for an employer to feel that he is not obliged to comply with the sentiments expressed in the arbitration clauses contained in our agreement on file with your Board, simply because he sends in a letter of resignation to his employers' association?

Section 19 of the Manitoba Labour Relations Act requires all agreements to contain a provision for final settlement of disputes without stoppage of work, and subsection 3 of the same section reads:—

> Every party to, and every person bound by the agreement, and every person on whose behalf the agreement was entered into, shall comply with the provisions for final settlement contained in the agreement.

The decision of the Board was that where an employer is a member of an employers association at a time when the association assumed obligations which bind the member employer, the subsequent resignation of the member will not relieve him from the obligation thus assumed.

Minimum Wages in New York State

A recent issue of the *Industrial Bulletin*, published by the New York State Department of Labour, contains an article, based on a 1950 Labour Department survey, summarizing the development and present status of one of the State's largest industries, retail trade, with particular emphasis on the changes in wages and hours which have taken place since 1945, when the State's Minimum Wage Order governing retail store employees went into effect.

On November 12, 1945, the New York State Retail Trade Minimum Wage Board promulgated Minimum Wage Order No. 7. The effect of this Order was to place a floor under the wages of approximately half a million workers employed in some 95,000 retail stores in the distribution of goods to the consumer public.

Today the Order provides wage protection for 575,830 workers in 100,000 establishments. The article points out that the past five years have been a time of expanding trade and rising prices and refrains from attributing any changes to the effects of the Order. Nevertheless, it seems apparent that "a vital relationship" exists between them and the Minimum Wage Order and that the Order has had a real and beneficial effect not only on the earning power and working conditions of retail trade employees but also on the industry itself, by giving it a greater stability during the past five years.

In April, 1943, almost one-third of the women employed in retail stores earned less than 40 cents an hour and only nine per cent earned over 75 cents an hour. In 1944, though prices continued to climb, only 13 per cent of this group earned over 75 cents an hour. In the same year the State Department of Labour, on the basis of a state-wide cost-of-living survey, set $1,645.33 as the cost of adequate maintenance and health for a working woman living as a member of a family. This was approximately $31.64 a week. In view of the fact that the 1943 weekly median earnings for women in the industry were $19.37 and in 1944, $20.78, it can be seen that a wide gap existed between retail trade earnings and the figure established as a minimum for adequate maintenance and health.

To remedy this situation the Retail Trade Minimum Wage Board sought to provide female full-time employees in the industry with a guaranteed weekly wage, geared to a basic hourly rate. Part-time employees were provided with a somewhat higher hourly rate, both to compensate them for their extra labour and also that full-time employment might be encouraged. It was also considered desirable to grant workers who put in more than a certain number of hours per week premium rates for those extra hours.

The 1945 Order provided that full-time workers should be paid a wage of $21 for a work-week of 30 to 40 hours (52½ cents an hour for a 40-hour week) and that part-time workers be granted 57½ cents an hour for a work-week of 30 hours or less. A minimum daily wage payment for four hours' work was authorized for workers reporting for work at the employer's request. For days on which the spread of hours exceeded 11 or in which the hours of work were not consecutive, an additional 75 cents a day was established. An overtime rate of 79 cents an hour (time and one-half the minimum rate) was set for work in excess of stated weekly hours, varying with the size of the community.

The relatively high rate for overtime work in excess of the stated weekly hours has persuaded most employers to introduce the five-day, 40-hour work-week, particularly in the metropolitan areas where overtime rates are effective after 40 hours.

The Order was first applied to women and minors but an amendment passed in 1944 extended its benefits to male adult workers.

The wage order is enforced by the State Department of Labour's enforcement investigators. It was noted that violations of the Order were most frequently found with respect to the hourly rate to be paid to part-time employees and with respect to the established overtime rate and the basic weekly minimum for full-time employment. It was found, too, that compliance with the Order has improved. This is partly due to the rise in wage levels. Data collected indicate, however, that wages have risen most in those branches of the industry where there were the largest numbers of low paid women workers before 1945.

Between 1943 and 1950 average hourly earnings for female employees in department and variety stores more than doubled, rising from 46 cents to $1 in department stores and from 35 cents to 71 cents in variety stores. In drug-stores the increase in wages since 1943 was 56 per cent and food stores it was 82 per cent.

In January, 1950, it was estimated that $2,038 per year or $39 a week was necessary for the maintenance of a working woman in New York State. Median weekly salaries in February, 1950, of women

in retail trade stood at $34.50. Since the Minimum Wage Board has already revised upwards its six other minimum wage orders, it can be anticipated that similar action will be taken with respect to Order No. 7. This is the more likely in that, as a result of the 1949 amendment to the Fair Labour Standards Act (L.G., 1949, pp. 1576-1578), interstate workers are required to receive a minimum wage of 75 cents an hour. The presence of two groups of workers in the State performing services of essentially equal value, yet paid according to widely differing legal minima, says the article, is a matter which the State of New York, a leader in progressive labour legislation, will not be likely to ignore.

In retrospect, the five years during which it has been in effect, indicate that a guaranteed floor under wages in an industry does not mean that the minimum becomes the maximum or even the average wage paid. Such a possibility, of course, is always present and remains a matter of some concern for the New York State Department of Labour. The Order became law over the objections of several hundred employers in the industry who filed petitions challenging its validity on various grounds. The Department feels that the industry's experience under the Order has demonstrated the soundness of its provisions.

Regulations Under the Minimum Wages Act of India

The Indian Minimum Wages Act which was assented to on March 15, 1948, required the appropriate Central or Provincial Government to fix minimum wage rates in certain industries within a period of two years subsequent to the Act coming into effect, and in the case of agriculture within three years (L.G., 1949, p. 283).

On June 16, 1950, the Government of India extended the two year limit to a period of three years. The industries affected were those included in Part 1 of the Schedule to the Minimum Wages Act. Included were the following: carpet making, shawl-weaving, rice or flour milling, tobacco manufacturing, plantations, oil mills, road construction, building, stone breaking, mica mining, public motor transport, tanneries and leather manufacturing, unless fewer than 1,000 employees are employed in any of the industries mentioned above in a particular province. The extension was allowed in view of the fact that certain difficulties were being experienced in implementing the Act. Any wage rates that have been established already were validated by this ordinance.

Under the Minimum Wages Act, the State of Delhi has issued Regulations dealing in particular with hours of work, rest periods and weekly holidays for persons in certain occupations and with the employment of young persons. These Regulations have effect in the following industries: woollen carpet and shawl-weaving establishments, rice mills, flour mills, dal mills or oil mills, tobacco factories, plantations, stone breaking or crushing, public motor transport, road construction, building, employment under public authority and agriculture.

The Regulations provide that no person may work more than 48 hours in a week or for more than nine hours in a day. Daily hours are to be so established that no employee will work more than five hours without a rest period of at least half an hour. Total hours at the place of work when employees work on split shifts are not to exceed 10½ hours in a day but a Minimum Wage Inspector may permit the daily spread of hours to be increased to 12. For work in excess of 48 hours in a week or nine in a day, an employee is to receive one and one-half times the ordinary rate of wages in agriculture and double the rate in any other employment. The term "ordinary rate of wages" is defined as ". . . the basic wage plus allowance, including the cash equivalent of the advantages accruing through the concessional sale to the person employed of food grains and other articles, but not including a bonus."

The first day of the week is to be a holiday for employees unless they have had one in the previous five days or will have one in the subsequent five. The weekly holiday may be replaced by another day but no worker may work for more than ten days consecutively. Payment for the weekly holiday is the average daily wage during the preceding week.

With respect to the employment of young persons, no child under 15 is permitted to work for more than four and a half hours in any day. The hours of work for an adolescent (15-17 years) are to be the same as those of an adult or a child according to the recommendations of a certified medical practitioner. The Regulations define an adult as a person who has completed his seventeenth year.

UNEMPLOYMENT INSURANCE

Selected Decisions of Umpire Under the Unemployment Insurance Act

Digest of selected decisions in appeals heard by the Umpire under the provisions of the Unemployment Insurance Act. Published in two series (1) Benefit cases, designated CU-B, and (2) Coverage cases, CU-C.

Held that the claimant had not shown cause within the meaning of the Act for for having voluntarily left her employment.—CU-B 635 (November 28, 1950).

Material Facts of the Case:

The claimant, a married woman, worked as a sewing machine operator for a manufacturer of ladies' garments in Winnipeg, Man., from June 9, 1949, to April 13, 1950, when she was laid off due to lack of work. Her rate of pay was $41.25 a week plus bonus. On April 20, 1950, she filed an initial claim for benefit which was allowed.

On June 26, 1950, she accepted a job as a sewing machine operator with another firm in Winnipeg and worked until June 30, 1950, when she voluntarily left, because the rate of pay of $30 a week was lower than that which she had received in her previous employment.

The Insurance Officer disqualified her from the receipt of benefit for a period of six weeks, because, in his opinion she had voluntarily left her employment without just cause (Section 41 (1) of the Act). In her appeal to a Court of Referees the claimant stated that she had found work on July 18, 1950, with another garment manufacturer at a wage of $37.50 a week which remuneration she considered more satisfactory than $30 a week. The Court of Referees decided that the Insurance Officer had rightly disqualified the claimant but reduced the period of disqualification to three weeks in recognition of her efforts in securing more remunerative employment.

From the decision of the Court, the claimant appealed to the Umpire.

Conclusions:

The claimant must or should have known the conditions under which she was going to work and the salary she could expect to receive when she accepted the employment with .....

There is no evidence that the employer did not fulfill his part of the agreement, nor is there any evidence that she was not employed at the prevailing rate of pay in the district for the kind of work she was performing.

Under the circumstances I do not see any valid reason to interfere with the majority decision of the Court of Referees which was rendered in the light of their knowledge of the local conditions of work. As they rightly pointed out, she should have remained in her employment until a more remunerative employment materialized which in fact did a few weeks later.

The appeal is dismissed.

Held that the claimant had shown just cause within the meaning of the Act for having voluntarily left his employment. —CU-B 636 (November 28, 1950).

Material Facts of the Case:

The claimant, married, a displaced person from Europe, was employed by the Hydro Electric Power Commission of Ontario on its Des Joachims project as a labourer at a rate of pay of 75 cents an hour from April 18, 1949, to April 13, 1950, when he voluntarily left his employment.

On April 18, 1950, he filed an initial application for benefit at the Montreal local office of the Unemployment Insurance Commission but the Insurance Officer disqualified him from the receipt of benefit for a period of six weeks, because, in his opinion, he had voluntarily left his employment with just cause (Section 41 (1) of the Act).

The claimant appealed to a Court of Referees stating that as he had completed his contract of work with the Hydro Electric Power Commission of Ontario which was for a period of one year and thereby fulfilled the undertaking made with the Government of Canada as a condition of his entry into Canada, he voluntarily left his employment to seek work in his trade as a carpenter in Montreal which after a short period of unemployment he was successful in obtaining.

The Court by a majority finding upheld the decision of the Insurance Officer. From the Court's decision the claimant appealed to the Umpire.

CONCLUSIONS:

According to the submissions the claimant who is a carpenter by trade, covenanted as a condition of his entry into Canada, to work as a labourer for a period of one year. He was assigned to work on a hydro electric power development project situated in a rather remote part of the Province of Ontario and his family upon arrival in Canada from Europe took up residence in Montreal. Upon fulfilment of his contract, he received a certificate from the Federal Department of Labour indicating that he had faithfully discharged the undertaking he made with the Government of Canada to remain in employment, as assigned, for a period of 12 months. He was also urged, by the said Department to remain in his employment but in the event that he found it unsuitable he was told that the services of the National Employment offices were at his disposal.

The claimant felt that his employment was unsuitable in view of the fact that it was at a low wage, not in his trade and located a few hundred miles from his family. The closest placement office being approximately 50 miles from the camp where he was working, he decided to go and look for employment in Montreal where his family resided, and where he could reasonably expect to find employment in his trade. He registered for employment at a local office of the Unemployment Insurance Commission in that city and a few weeks later succeeded in finding employment in his own trade.

On this evidence, I consider that the claimant was justified in voluntarily leaving his employment and that he should not be subject to disqualification under Section 41 (1) of the Act.

Had he not worked at a point which was distant from places where he could look for employment with a reasonable chance of success, I would have agreed with the majority of the Court of Referees that he should have had assurance of obtaining other employment before voluntarily leaving his job.

The appeal of the claimant is allowed.

Unemployment Insurance Statistics, December 1950*

The monthly report issued by the Dominion Bureau of Statistics on operations under the Unemployment Insurance Act states that during the month of December, 1950, a total of 134,218 initial and renewal claims for unemployment insurance benefit were filed at local offices of the Unemployment Insurance Commission. While this is an increase of approximately 44 per cent over the 93,016 claims in November, it is still slightly lower than the 139,406 claims filed in December, one year ago. Largest percentage increases over last month's totals occurred in the provinces of Prince Edward Island (124 per cent), Quebec (60 per cent), Manitoba (63 per cent) and Saskatchewan (53 per cent).

There were 183,268 ordinary claimants on the live unemployment insurance register on the last day of the month, compared with 124,794 on November 30 and 222,064 on December 31, 1949.

A total of 202,345 active claimants, including 6,833 claimants for supplementary benefit, were on the live register at the end of December. Of this total 141,800, or 70 per cent, of the active claimants had been on the register seven days or more.

Initial and renewal claims handled at adjudicating centres numbered 111,405. Claims allowed numbered 84,956, while 26,449 claims were disallowed or disqualified.

Claims disallowed (because of insufficient contributions) totalled 16,983. Chief reasons for disqualification were: "voluntarily left employment without just cause" 4,280 cases; "not unemployed" 3,651 cases; "not capable of and not available for work" 816 cases.

There was a considerable increase in December in the number of persons (69,870) commencing the receipt of benefit on initial and renewal claims over the number in this category in November (49,532). The total for December, 1950, was, however, lower than for the corresponding month in 1949 (89,823).

During the month of December $5,308,818 were paid for 2,192,851 days, as compared with $4,184,103 for 1,781,566 days in November, and $7,181,001 paid for 3,066,888 days in December, 1949.

For the week December 30, 1950, to January 5, 1951, 101,918 persons received $1,431,588 in respect of 583,743 days, as compared with 79,052 persons paid $1,052,948 for 439,993 days during the week November 25 to December 1, and 125,225 persons paid $1,681,780 for 716,194 days in the week December 10 to December 16, 1949.

* *See* Tables E-1 to E-8.

The average weekly duration of benefit for the week December 30, 1950, to January 5, 1951, was 5·7 days, as compared with 5·6 days for the week November 25 to December 1, 1950. There was an increase in the amount of weekly benefit paid, from $13.32 for the week November 25 to December 1, 1950, to $14.05 for the week December 30, 1950, to January 5, 1951.

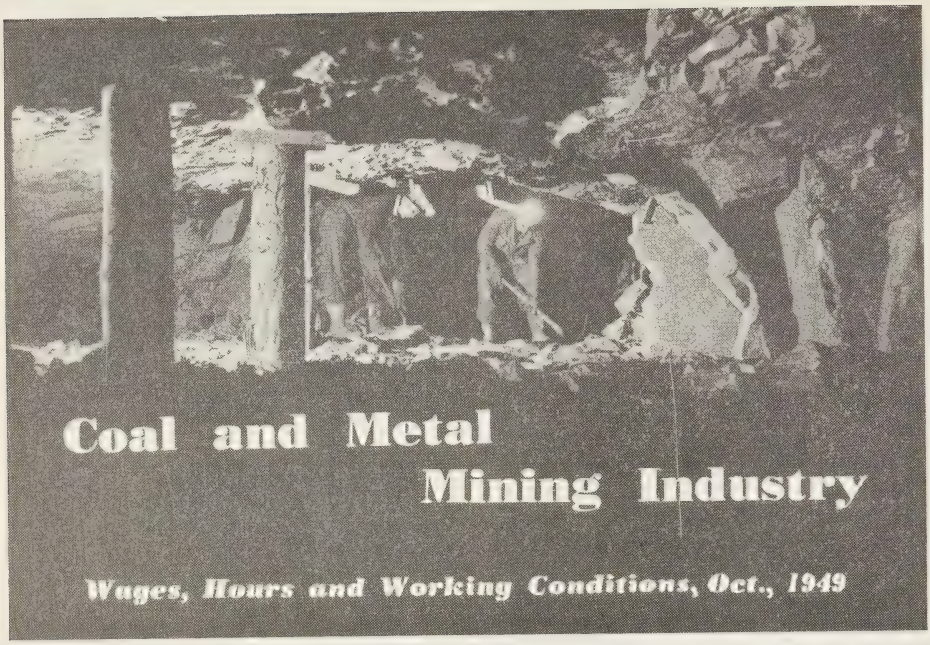
These figures reflect a secular reduction in unemployment among insured persons when comparisons are made with the same period last year. A normal seasonal increase in unemployment is also evident when comparisons are made with the situation obtaining in the preceding month.

Insurance Registrations

Reports received from local offices of the Unemployment Insurance Commission showed that during December, 1950, insurance books were issued to 4,024,156 employees who had made contributions to the Unemployment Insurance Fund at one time or another since April 1, 1950. This was an increase of 79,171 since November 30, 1950.

As at the end of December, there were 241,569 employers registered, representing an increase of 63 since November 30.

Supplementary Benefit



This year, and in succeeding years, supplementary unemployment insurance benefit is payable during the period January 1 to March 31 inclusive.

The program is designed to protect workers who become unemployed in the winter months and who have exhausted their right to ordinary unemployment insurance benefit, or who are ineligible for certain other reasons (L.G., Dec., 1950, p. 2031).

The procedure for handling supplementary benefit claims differs this year from last in that no distinction is made in the initial handling of regular and supplementary benefit claims. Applications are completed for regular benefit, and those who fail to satisfy the minimum contribution requirements are automatically regarded as applications for supplementary benefit. This is to ensure that supplementary benefit is not granted to a claimant who can qualify for regular benefit.

Although supplementary benefit is not payable until January 1, the commencing date for filing claims is December 1. Claimants making application for ordinary benefit on and after that date, who fail to meet the statutory conditions, are immediately considered for supplementary benefit, and may serve their waiting days (including the non-compensable day) prior to January 1, 1951. Only days of unemployment subsequent to December 31, 1950, may be paid for, however.

The number of initial claims considered during December and their disposition are shown in Table 8 in the Labour Statistics section.

Coal and Metal Mining Industry

Wages, Hours and Working Conditions, Oct., 1949

Average wage rates in the Canadian Mining Industries increased more than 3 per cent in 1949. The average increase was 4·4 per cent in Metal Mining and 1·7 per cent in Coal Mining.

Some substantial differences in hours and working conditions between the Coal and Metal Mining Industries are noted in the following article.

Average wage rates in Canadian mining increased just over 3 per cent during the year ending October 1, 1949, according to information obtained from an annual survey of the industry by the Economics and Research Branch of the Department of Labour. This raised the index of wage rates in the Mining Industry to a high of 187·6 over the base year 1939 as 100. The wage increase in 1949 was much less than during each of the two previous years when the average wages rose 15 per cent in 1947 and 12·5 per cent in 1948.

There were some substantial differences in working conditions between the Coal and Metal Mining Industries at the time of the 1949 survey. The 5-day 40-hour normal work week was predominant in Coal Mining, whereas the 6-day 48-hour week was predominant in Metal Mining. Time and one-half for work after regular daily or weekly hours and for work on Sunday, and double time for work on statutory holidays was more common in Metal Mining than in Coal Mining.

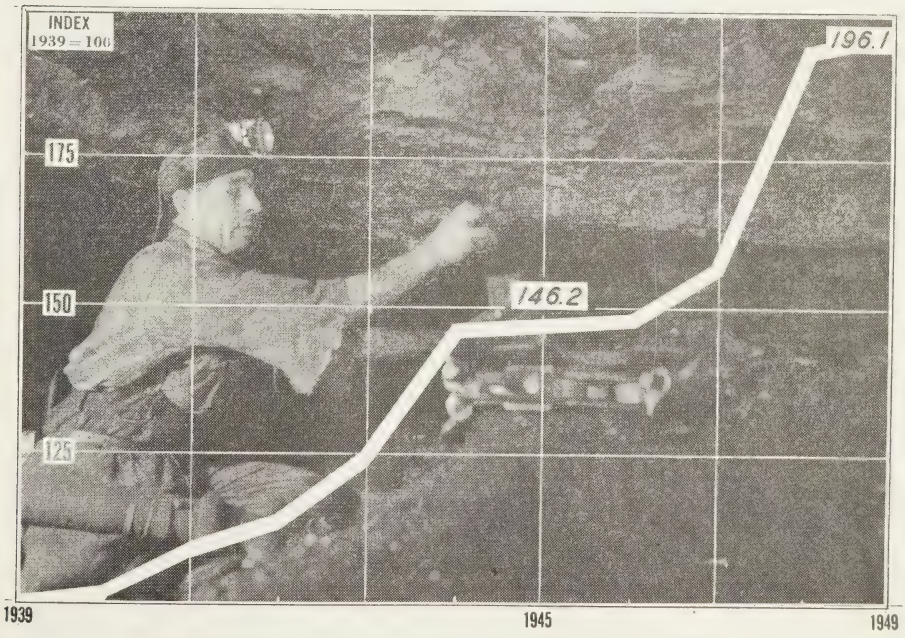
An initial vacation of two weeks with pay after a year of employment was general in the Coal Mining Industry, as compared with one week in the Metal Mining Industry. Three-quarters of the mine workers in this latter group, however, have their annual vacations increased to two or three weeks with pay after longer periods of employment. About one-half of the workers in Metal Mining were paid for some or all of the observed statutory holidays, but only two per cent of the workers in Coal Mining were reported to be paid the observed holidays when not worked.

* Information in this article was prepared from data obtained in the annual survey of wage rates and working conditions for 1949 conducted by the Economics and Research Branch of the Department of Labour. Employers were asked to report on wage rates (straight-time earnings for piece-workers) and certain conditions of work in their establishments during the last pay period preceding October 1, 1949.

Provincial legislation on working conditions may be obtained from the bulletin, *Provincial Labour Standards Concerning Child Labour, Holidays, Hours of Work, Minimum Wages, Weekly Rest-Day and Workmen's Compensation*, an annual publication of the Department of Labour.

COAL MINING

Canadian coal production in 1949 reached an all-time high of 19,120,000 short tons valued at almost $111 million. The Coal Mining Industry employed an average of 24,230 mine workers during the year, over 17,000 of whom were underground wage-earners.



Average daily wages of underground and surface workers rose 1·7 per cent in 1949 when a general increase was obtained by the employees of the eastern mines. Most of the workers were on a 5-day 40-hour week, received two weeks' vacation with pay and were employed by mines observing nine statutory holidays in 1949.

Information for this study of wages and working conditions was obtained from 85 coal mining establishments employing almost 23,000 surface and underground workers. More than one-half of these workers were employed in Nova Scotia, about one-third in Alberta, ten per cent in British Columbia, and less than 500 in New Brunswick and Saskatchewan. All but a few of the non-office employees in the Coal Mining Industry were men, thus the distributions of workers in the accompanying tables contain figures for male employees only.

Wage Rates.—The index of average daily wages in the Coal Mining Industry had, at October 1, 1949, risen to 196·1 over the base year 1939 as 100. The 1·7 per cent increase in 1949 was largely due to the 50 cents a day raise gained by the workers in eastern mines. This increase was not received by most of the workers until October 1949 but it was then made retroactive to February 1 of that year. The employees of the western mines did not receive a general wage increase in 1949 although there were some individual adjustments of rates.

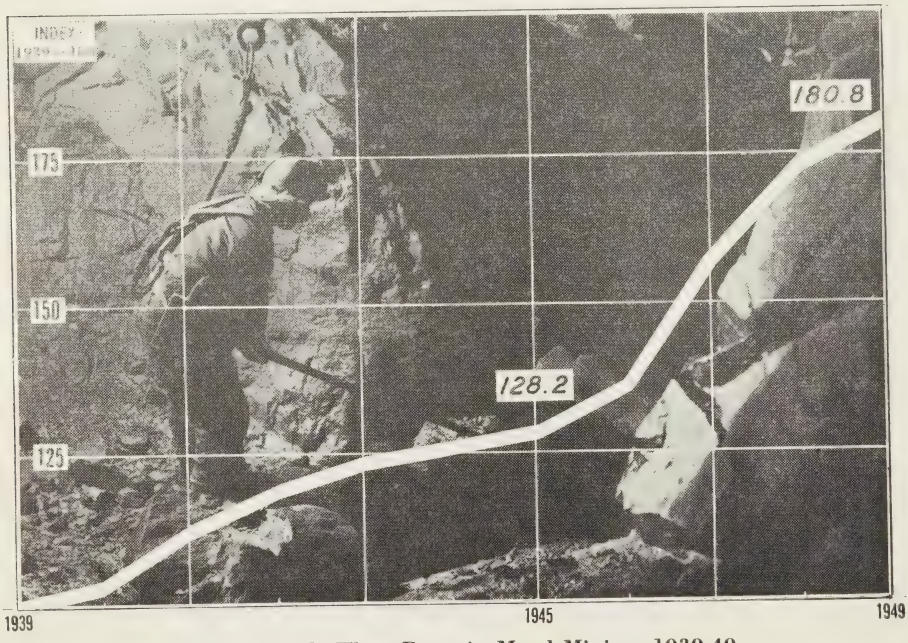
The average daily wage rates in the Coal Mining Industry varied about as much between the list of representative occupations shown in Table I as between the provinces for which information is given. Excluding the Contract Miners, who are on piece-work, the average wage rates for Canada as a whole ranged from $8.89 for Pumpmen to $10.68 for Datal Miners. The average basic Labourer rate, $8.96 for Canada, ranged from $8.14 in Nova Scotia to $10.07 in Alberta. The average straight-time earnings of Contract Miners was $12.65 a day for all Canada, and ranged from $11.75 a day in Nova Scotia to $15.19 a day in British Columbia.

The Normal Work Week.—Provincial legislation in 1949 limited underground work in coal mines to a maximum of 8 hours a day, although in Saskatchewan this limit could be exceeded by mutual consent. The maximum work week was also limited in Alberta to 48 hours and in

Average Daily Wage Rates in Coal Mining, 1939-49

British Columbia to 44 hours. Surface workers at coal mines were limited to the same working hours as underground workers in Saskatchewan, Alberta and British Columbia.

The 5-day 40-hour week was predominant in the Coal Mining Industry, with mining establishments employing 85 per cent of the workers reporting this schedule (Table II). The majority of the remainder were working 47 or 48 hours a week; and the four mines reporting from Saskatchewan were all on a 44-hour week. During the pay period preceding October 1, 1946, the previous year for which published information is available,[1] the majority of workers in the Coal Mining Industry were on a 6-day 48-hour week in each of the provinces except British Columbia. In that province most of the workers were then on a 5-day 40-hour week.



Overtime Payment.—An overtime premium for underground work after regular hours was reported by only one mining establishment in the eastern district (Table III). Certain surface trades, however, were paid time and one-half for work after regular daily hours and double time for work on Sundays and statutory holidays.

1 "Wages, Hours and Working Conditions in the Coal Mining Industry, October 1946", the LABOUR GAZETTE, April 1948, p. 352.

Almost all of the mines in the western provinces which reported information on overtime payment indicated a rate of time and one-half after regular daily or weekly hours had been worked and for work on Sundays and statutory holidays. Two mines reported a rate of double time for Sunday work and three reported this rate for work on statutory holidays. Double time and one-half on statutory holidays was reported by the four mining establishments in Saskatchewan.

Many mining establishments reported time and one-half for overtime in 1946 but none reported a rate higher than this. Fourteen of the mines in Alberta did not pay a premium for overtime work during the week in 1946, whereas in 1949 most of them reported paying time and one-half.

Vacations with Pay.—There has been no great change in the length of vacation with pay in the Coal Mining Industry since previous comparable information for 1946 was published. Almost all of the workers received an annual vacation of two weeks with pay, or the equivalent, after a year of employment. Only five mines, employing about 200 workers, reported giving an annual vacation of one week with pay. One of the mines in Nova Scotia which initially gave a paid vacation of two weeks reported giving three weeks with pay after 20 years of employment.

Average Hourly Wage Rates in Metal Mining, 1939-49

Statutory Holidays.—Less than one per cent of the workers in the Coal Mining Industry were employed in mining establishments which reported that they did not observe any statutory holidays in 1949 (Table IV). Ninety-five per cent of the workers were employed by mines which reported observing from 7 to 10 statutory holidays, with the largest numbers observing 9 or 10 days.

The number of holidays observed, in this article, is the number of days when the establishment is not operating by reason of Dominion, Provincial or Municipal holidays, or religious holidays regularly observed by the closing of the establishment.

Payment for statutory holidays when these days are not worked is not common in the Coal Mining Industry. Only 2 per cent of the workers were employed by mines which reported paying for statutory holidays when not worked.

Collective Agreements.—Almost 95 per cent of the workers included in the survey of the Coal Mining Industry were reported to be covered by written collective agreements. With but few exceptions the employees were represented by the United Mine Workers of America (CCL). The two main divisions under the United Mine Workers of America are District No. 18 in Saskatchewan, Alberta and British Columbia, and District No. 26 in Nova Scotia and New Brunswick.[2]

METAL MINING

The Metal Mining Industry employed an average of 65,330 employees in 1949, paying out approximately $187,400,000 in salaries and wages. This Canadian industry produced almost $514,500,000 in metals, excluding the value of metal production in Newfoundland, just over half of which was produced in Ontario. One hundred and ten million dollars worth of metals were produced in British Columbia and almost $83 million worth in Quebec.

The index of average hourly wage rates increased 4·4 per cent in 1949, less than half the percentage increase during the previous year. The 6-day 48-hour week was predominant in the Metal Mining Industry at the date of the survey, October 1, 1949. Most of the workers were paid time and one-half for work after regular daily or weekly hours and for work on Sunday; double time was predominant for work on statutory holidays. Almost all of the workers were in mining establishments which gave an initial vacation of one week with pay after a year of employment, and many of these increased the vacation period to two or three weeks after longer periods of employment. The large majority of workers were employed by mines observing from 3 to 7 statutory holidays; but just over one-half were paid for any or all of the statutory holidays when not worked.

Information on wages and working conditions for this study was obtained from 123 mining establishments employing 43,861 male employees working in mill, surface and underground occupations. More than 26,000 of these male employees were working in Ontario, about 7,600 in Quebec, 5,300 in British Columbia, 3,500 in Manitoba and 1,400 in Yukon and the Northwest Territories. Less than one per cent of the non-office employees covered in the survey of the Metal Mining Industry were women.

Wage Rates.—Average hourly wage rates in the Metal Mining Industry increased 4·4 per cent during the year ending October 1, 1949. This compares with an increase of 9·8 per cent during the year ending October 1, 1948 and 16·2 per cent during the year previous. The increase in 1949 raised the Metal Mining wage index to 180·8 compared with 100 in the base year 1939.

The Canada average of wage rates for the selected surface and mill occupations shown in Table V ranged from 97 cents an hour for Labourers to $1.23 for Electricians, and for the selected underground occupations from 91 cents an hour for Miner's Helpers to $1.13 for Hoistmen. Most of the underground workers were paid an incentive bonus in addition to their basic hourly rates, thus increasing their average hourly earnings. Whereas the Canada average wage rate for Miners was $1.06 an hour, the average hourly earnings figure was $1.36.

There was a large variation in average wages between provinces as well as between occupations. For example, the average hourly earnings of Miners ranged from $1.22 in Quebec to $1.54 in Manitoba; and the average hourly wage rate for Labourers ranged from 97 cents in Quebec to $1.03 in Manitoba.

The Normal Work Week.—Except in British Columbia, the 6-day 48-hour normal work week was predominant in the Metal Mining Industry (Table VI). In British Columbia, 44 per cent of the workers were on a 5½-day 44-hour week and 40 per cent were on a 5-day 40-hour week in 1949.

[2] Of general interest is the study, "Collective Agreements in the Coal Mining Industry in Canada, September, 1946", THE LABOUR GAZETTE, December, 1946, p. 1692.

Nine mining establishments, mainly engaged in surface operations, were reported operating on a work week of more than 48 hours; seven of these firms reported a 7-day 56-hour week.

The distribution of normal weekly hours in 1949 indicates little change since 1946, the last year for which comparable information was published.[3] The main difference is in the greater number of mines in British Columbia now operating on a 44-hour week and the two mines in that province, employing two-fifths of the workers, on a 40-hour week.

Overtime Payment.—Almost all of the mining establishments which reported information on overtime payment in 1949 indicated a rate of time and one-half for work after regular daily or weekly hours and for work on Sunday (Table VII). Forty-one of the mines, employing almost 13,100 workers, paid an overtime premium only after standard weekly hours had been worked.

More than one-half of the workers were employed by mines which paid double time for work on statutory holidays, and one-third were in those which paid time and one-half. Mining establishments employing about 10 per cent of the workers reported paying double time for work on certain statutory holidays, usually Christmas and New Years, and time and one-half for others.

Since 1946 there has been an increase in the number of mines paying time and one-half for work after regular daily hours and for work on Sunday, and an increase in the number paying double time for work on statutory holidays.

Vacations with Pay.—All but three of the mining establishments which reported giving annual vacations in 1949 paid for one week, or the equivalent, generally after a year of employment (Table VIII). The three exceptions were mines in the Yukon and Northwest Territories area which gave an initial vacation of two weeks with pay after a year or less of employment. Only one mine reported that annual paid vacations were not given to the workers.

Three-quarters of the employees were in mining establishments which increased the period of vacation as the worker's term of employment continued. A second week with pay, or four per cent of earnings, was given after periods of service up to 9 years, in most cases after five years. Four mining companies, employing almost 13,800 workers, gave three weeks' vacation with pay after periods of employment ranging from 15 to 25 years.

There has been some increase since 1946 in the number of mines giving a vacation of two weeks with pay or more. Whereas 28 per cent of the mining establishments reported giving two weeks with pay in 1946, almost one-half reported giving two or three weeks in 1949.

Statutory Holidays.—Ninety-eight per cent of the workers in the Metal Mining Industry were employed by mining establishments which reported observing from 2 to 7 statutory holidays in 1949 (Table IX). Thirty-eight per cent of the workers were in mines which observed 6 statutory holidays and about one-quarter were in those which observed 4 days.

As for the Coal Mining Industry above, the statutory holidays are those days when the establishment is not operating by reason of Dominion, Provincial or Municipal holidays, or religious holidays regularly observed by the closing of the establishment.

One-half of the workers were employed by mining establishments which did not pay for any of the statutory holidays if these days were not worked. Of those workers who were paid for some or all of the statutory holidays when not worked, 60 per cent were paid for 6 days and 10 per cent were paid for 4.

Collective Agreements.—Two-thirds of the workers included in the survey of the Metal Mining Industry were reported to be covered by written collective agreements. Most of the workers who were covered by the terms of these collective agreements were represented by the International Union of Mine, Mill and Smelter Workers. This union was expelled from the CCL in 1949 and from the CIO early the following year.

[3] "Wages, Hours and Working Conditions in the Metal Mining Industry, October 1946", THE LABOUR GAZETTE, May, 1948, p. 497.

TABLE I.—AVERAGE DAILY WAGE RATES FOR SELECTED OCCUPATIONS IN THE COAL MINING INDUSTRY, OCTOBER 1949

Occupation	Canada (1)	Nova Scotia		Alberta		British Columbia	
	Average Wage Rate per Day	Average Wage Rate per Day	Range of Rates per Day (2)	Average Wage Rate per Day	Range of Rates per Day (2)	Average Wage Rate per Day	Range of Rates per Day (2)
	$	$	$	$	$	$	$

Employment Conditions

An analysis of the current employment situation prepared by the Economics and Research Branch, Department of Labour, on the basis of returns from the National Employment Service, reports from the Dominion Bureau of Statistics, and other official information.

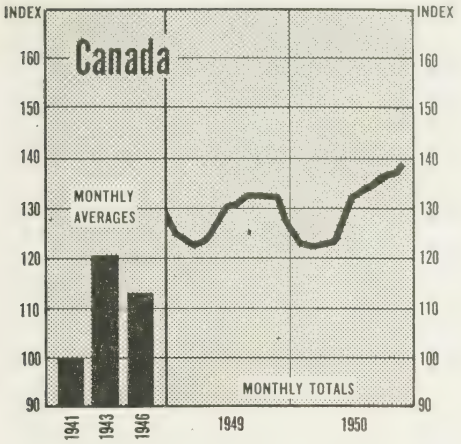
January 1951 . . .

. . . was characterized by sustained activity in most manufacturing industries and logging, accompanied by continued lulls in agriculture, transportation and construction. Seasonal unemployment increased steadily with applications for employment on file at National Employment Service offices reaching 300,000 at the month-end. The number of persons looking for work has been relatively higher on the west and east coasts than in the central regions where, even with the seasonal labour surplus, there were still some labour shortages. These have appeared in logging and in those sections of manufacturing which have been influenced by high consumer demand and defence spending.

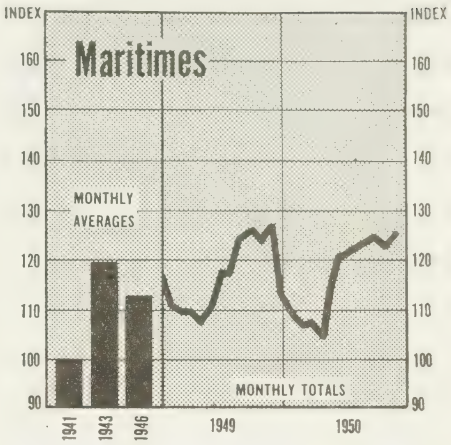
During January, continued expansion in the manufacturing industries, especially in Ontario and Quebec, engendered by high capital investment and strong consumer demand, coupled with the possibility of future defence orders, has given rise to considerable concern about available supplies of manpower for an expanded defence program.

In spite of mounting seasonal unemployment arising from temporary inactivity in such industries as construction, agriculture and transportation, employment nevertheless remains generally at near record heights. This year, logging in Eastern Canada has meant jobs for twice as many woodsmen as last winter and shortages of labour were reported from most cutting areas during January. Cutting is being carried on much later this year, although towards the end of January, hauling had begun in some districts.

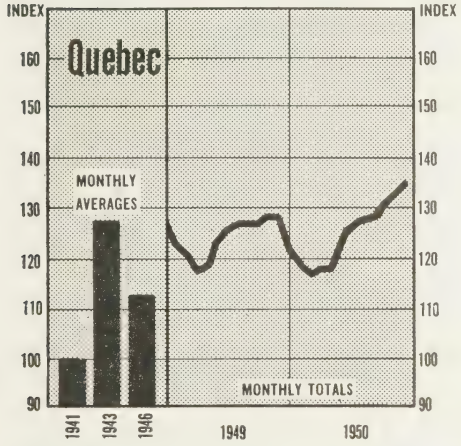
One indication of available labour supplies in Canada is the number of applications for work on file at National Employment Service offices. These totalled 300,000 at the end of January, or approximately 6 per cent of the labour force. Slightly more than a third of these applications were from persons in unskilled occupations. Of the remaining 64 per cent, about 36 per cent fell in occupations classified as skilled or semi-skilled and the remaining 28 per cent were in the clerical, sales and service groups.



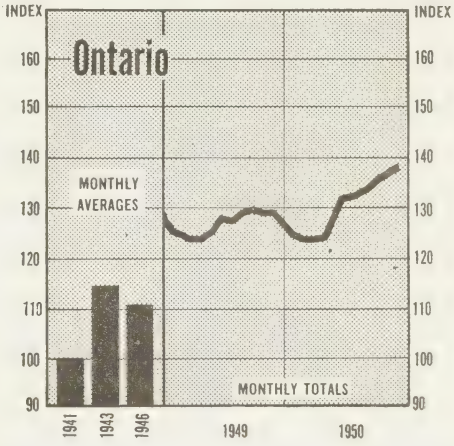
Another significant feature of the reported labour supply was that a larger portion was in the age group of 45 and over than at any time before in the post-war period. About one out of every three applications were from persons 65 and over. In actual numbers, there were 59,000 men and 11,000 women between the ages of 45 and 64 and another 23,000 and 1,200 who were 65 years of age and over. One in four applications on file at the end of January was received from a woman; the majority of these applicants are married.



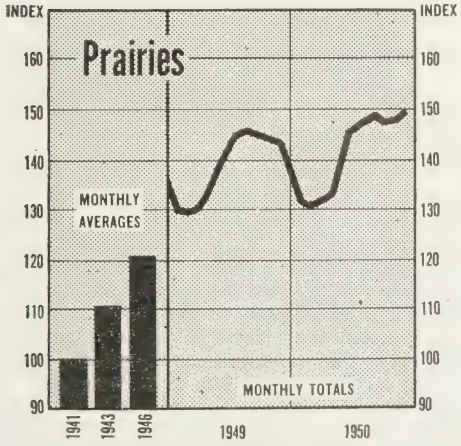
Regional Analysis



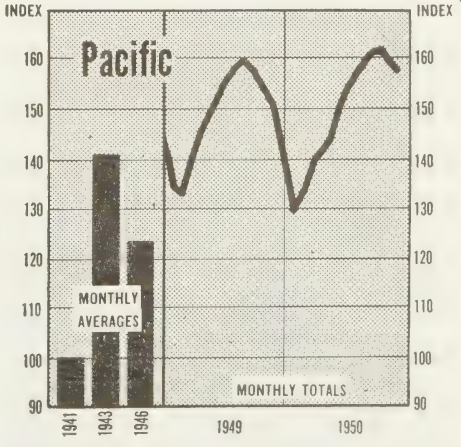
During January, more than 200 work projects started by the ***Newfoundland*** government in October and November shut down, releasing several thousand relief applicants. Woods employment declined somewhat as the pulpwood cut neared this year's quotas, but log hauling, and extended cutting in central and eastern areas where hauling was retarded by lack of snow, kept a large number of workers in the bush. Construction and navigation, trade and related activities experienced further seasonal slackening. These factors contributed to a considerable rise in the number of job applications on file with National Employment Service offices during the month, bringing the total to 9,100. This, however, was still almost 40 per cent lower than at the comparable 1950 date.



In the ***Maritimes,*** unfavourable weather conditions kept logging activity at a low level in most of Nova Scotia and eastern New Brunswick. Mild weather and lack



REGIONAL EMPLOYMENT TRENDS



78060—7½

of snow made log hauling virtually impossible. Lumbering operators were considering closing down bush camps, fearing that some of the logs already cut and any additional cutting might have to be left in the woods. In the rest of New Brunswick, however, with conditions more favourable to bush work, woods activity continued at a high level. Fishing was seasonally quiet, except for smelt, where operations were handicapped by mild weather and by a severe storm early in the month. The effects of unseasonal weather on construction were also pronounced but not, as in fishing and forestry, unfavourable. Despite growing material shortages, building remained much more active than a year ago in many of the larger centres. Shipbuilding employment varied only slightly, continuing at a low level; and the steel shortage kept the outlook for this industry uncertain. Registrations with NES in the Maritimes totalled 32,200 at February 1, 20 per cent below last year's level.

In ***Quebec,*** where job applications totalled 89,300 at the end of the month—almost 20 per cent below the comparable 1950 total —manufacturing employment continued to increase as the aircraft, textile, men's footwear and leather glove industries expanded seasonally and to handle military contracts. Chemicals and aluminum production maintained high levels of activity, with staff being trained for further expansion in the latter industry. Steel-using industries continued to experience difficulties due to shortages of materials on the one hand and of key skills on the other. Other industries affected by material shortages included woollen and nylon hosiery mills, leather, rubber products and furniture manufacturing. Heavy snow in some areas north of the St. Lawrence hampered logging and suspended work on the Labrador railway, while in other areas pulp cutting quotas were being extended, some indefinitely. The general level of woods employment remained much above last year's and shortages of experienced pulp cutters persisted.

In the steel-using industries in ***Ontario,*** expansion of employment occurred simultaneously with lay-offs brought on by the steel shortages, but the net outcome was an advance in over-all employment. Defence orders led to increased employment in the aircraft and rubber products industries during January. Expansion was under way in the already active chemicals industry with a 20 per cent increase planned in the production of synthetic rubber. Steel producers added to their payrolls, some putting on extra shifts. Generally above-average temperatures favoured an unusually high level of building activity for this time of year, despite some slackening in construction employment that, with seasonal lay-offs in food products industries and in retail trade, contributed to a rise in job applications during the month. At February 1, the regional total of registrations with NES offices stood at 68,300, almost 25 per cent lower than last year at that time.

By the end of January, active registrations in the ***Prairie*** region offices of the NES totalled 51,100, almost as high as last year at the same time. During the month, while bush work continuerd to employ large numbers in the Lakehead district and pulpmills and shipbuilding there took on staff, extreme cold curtailed construction activity farther west. Seasonal lay-offs occurred in meat packing, sugar processing and retail trade and coal production was reduced by low demand and strikes. These factors, together with a larger number of farm workers seeking winter jobs to augment lower farm cash income this year, resulted in an over-all level of unemployment very similar to that of last year.

The northern interior was the only part of the ***Pacific*** region in which gales and heavy precipitation did not drastically curtail woods operations and sawmilling activity in the latter part of January by making bush roads virtually impassable. Seasonal causes and the completion of some large projects brought further slackening to the construction industry during the month, although preliminary work has been started on several large undertakings that will keep the industry fully active later this year. Shipbuilding employment rose as refitting and conversion work for the Navy got underway, and increased port activity provided more work for longshoremen. Job applications in NES files in the region rose to a month-end total of 50,000. This was over 25 per cent lower than at the beginning of February, 1950.

Industrial Analysis

Canadian ***manufacturing*** plants have been much busier this winter than last year, when lay-offs and short-time work were widespread. Not only has there been an increase in the number of jobs provided but this employment has been steadier and at higher wage rates on the average. It is estimated that about 5 per cent more persons were employed in manufacturing plants at the end of 1950 than there were one year earlier, which represents an increase of over 50,000 jobs. Lay-offs have been few in number, resulting rather from

shortages of materials than lack of orders. During January, about 1,700 workers were reported as laid off, with over 700 of this total in industries using steel where the principal cause was shortage of steel. Latest data place avarage weekly earnings in the industry at approximately $49, nearly $3.50 per week more than at the same date in 1949.

Meat packing.—During 1950, inspected slaughterings of cattle and sheep showed a sharp decline from the previous year while those of hogs registered a marked increase. Calf slaughterings increased slightly during the year. The net effect was to maintain employment in the meat packing industry at about the same level in 1950 as in 1949, the work force in the industry numbering about 22,000 at the end of the year.

Inspected Slaughterings of Livestock, 1949 and 1950—Canada Total

	1950	1949
Cattle	1,284,683	1,439,489
Calves	773,205	766,277
Hogs	4,405,055	4,098,609
Sheep	521,089	629,673

In the month of January, a seasonal slackness in employment is usual. This was reported as evident among smaller plants but a strong market for beef cattle in part offset this trend. With a strong domestic market and high prices prevailing, the volume of exports to the United States was held down. In the first six weeks of the year, shipments of beef cattle totalled about 24,000 head, about half the number in the same period in 1950 when exports were unusually high.

Dairy products.—The downtrend in dairy employment which began during 1950 continued in January as many rural butter and cheese factories were experiencing the usual winter slowdown with about half the staff laid off. Over the long term, declining milk production (down from 15·7 million pounds in the first eleven months of 1949 to 15·4 million in the first eleven months of 1950) was the main factor in the lower employment. While milk sales have increased, production of such end-products as butter and cheese has declined, with a corresponding reduction in dairy employment. Although no surplus of any of these products exists, there was no indication during January of a reversal of the downward employment trend.

Primary textiles.—Increased demand for civilian goods and the beginning of work on defence orders have resulted in expanded operations in the primary textile industry. At December 1, 1950, the working force was estimated to be about 5 per cent higher than at the same time in the previous year, with over 64,000 persons at work in cotton, wool, and synthetic silk plants. Some plants have added new shifts and others are operating training programs for inexperienced new workers. Skilled workers are reported as scarce, particularly in such trades as spinners, weavers and loom fixers. There has been no shortage of inexperienced help during the winter.

Pulp and Paper.—Expansion in production and employment in the pulp and paper industry is limited not by the demand for its products but, rather, by the capacity of the industry. The United States continues to absorb Canadian newsprint production at a record rate, now taking nearly 90 per cent of total production. Requests for paper have also been received from the United Kingdom, Australia, South Africa and some European countries. New job opportunities in the industry have not been as large as might have been expected in view of this strong demand. In the year ending December 1, 1950, employment showed an increase of just over 7 per cent. Canadian newsprint production in 1950 was estimated at 5·3 million tons (5·2 million in 1949). This accounted for 54 per cent of world production and 81 per cent of world exports.

Farm Implements.—Employment in the farm implements plants was seasonally high in January, as the industry was producing for spring sales. Although farm cash income declined by about 12 per cent in 1950, sales of farm implements have not been reduced. The possibility of farm labour shortages, as well as the anticipated scarcity of farm machinery, have sustained the level of sales. Although lack of steel was hampering production, employment in the industry was over 15,000, well above year-earlier levels.

The labour market in the ***logging*** industry in the East continued unusually active during January. A large proportion of the workers in the industry went home for the Yuletide holidays but were drifting back into the woods before the middle of the month. Some of these were taken on for cutting operations, which are being carried on much later this year, while others were engaged in hauling work. Heavy snowfalls during the month interfered with the former in some areas but generally were of assistance to hauling.

Shortages of labour were reported from most cutting areas during the month. With the strong demand for labour, experienced woods workers had no difficulty in obtaining employment. When one camp finished its cut, the men released were quickly

absorbed in another. There was also a strong demand for Canadian woodsmen in the United States and many workers from Quebec and New Brunswick were moving over to Maine. Immigration of Displaced Persons for logging work has provided some help in relieving the worst shortages, although it takes from one to three weeks to train these men. Another 326 DP's were admitted to Canada for this work during January.

An indication of the increased activity in the logging industry this year is shown in the weekly report on the number of men employed in woods work by member companies of the Canadian Pulp and Paper Association. At January 27, 1951, the total was 62,700, as compared to 30,400 at January 28, 1950. In the peak season 1947-8, the figure at the same date was 74,800. These figures refer to operations in Eastern Canada, including Manitoba.

Activity in the logging industry in British Columbia was at a low point in January, with frequent interruptions in work due to snow conditions. The first part of the month was fairly active and many camps which had been closed were re-opened. Heavy snowfalls took place after the middle of the month, however, and caused many work stoppages. A temporary surplus of labour was indicated in an increase in registrations of skilled loggers with NES in the province from 2,350 to 3,360. The number of applications on file in unskilled occupations in the lumber products industry also increased from 2,100 at the first of the month to 2,900 at the end of January.

Winter inland ***fishing*** was under way in northwestern Ontario and the Prairies during January. Good catches of trout, whitefish, and pickerel were reported in the Lakehead area but it was a poor season on Lake Winnipegosis. In Saskatchewan, deliveries of fish from northern lakes was impeded by the heavy snowfalls during the month. Crews on the Great Lakes had abandoned their nets for the season with some busy readying their gear for April and a few fishing through the ice.

The herring fishery was the only major fishery being prosecuted on the West coast during the month. Fishing in the northern district closed on January 12 but continued in the central district as only half the 40,000 ton quota had been caught. In Prince Rupert, the season was reported as the best on record.

Winter smelt fishing in the Maritimes was spotty on the whole during January. Mild weather which prevented the freeze-up of rivers and bays seriously affected operations in the Bridgewater, N.S. and Campbellton, N.B. areas. Favourable weather conditions were reported from Bathurst, N.B. but the catch was poor. On the other hand, exceptional smelt catches were reported from the Miramichi River area. A record high tide caused heavy losses to smelt fishermen on New Brunswick's east coast during January, as many nets were carried away. The extension of the season to February 28th may assist these fishermen in making up their losses.

Agricultural work being carried on during January consisted principally of the normal daily chores on farms and cutting on woodlots. Labour demand was mainly for the replacement of year-round workers. There was some activity in specialized lines, such as fruit-tree pruning in southern Ontario and turkey-raising in Quebec but little labour market activity as a result. The unusually mild weather in the Maritimes permitted spring ploughing in some areas. Heavy snowfalls in British Columbia kept farm work in that province at a minimum and the only employment opportunities were for experienced dairy workers and skilled general farm help.

There was increased interest in Displaced Persons for farm labour for the coming season and some farmers were placing orders with the NES for this type of work in January in case of labour shortages in the busy season. The Federal Government has asked the International Refugee Organization for 3,000 single farm workers this year and 250 families for sugar beet work. As well, 500 Italian farm workers are being brought in and plans are being worked out for the admission of another 10,000 persons from Holland.

Employment Service Activities

Slightly more than a third of the 300,000 applications for work on file at February 1 were from persons in unskilled occupations. This is a higher proportion than in the previous two winters. Where training would benefit these workers, employment office officials may refer them to various schools, and at the same time allow them to collect their unemployment insurance benefits. During the last four months of 1950, an average of 185 persons were referred and began training each month under such arrangements. With the defence program requiring more and more skilled help, this phase of Employment Service activity is becoming increasingly important. However, because job opportunities are more plentiful this year, it has been more difficult to persuade applicants to undergo training on the limited

income of unemployment insurance benefits, or the allowances which may be provided by the provinces for those not eligible for benefits.

Of the remaining 64 per cent of applications, 36 per cent fell in occupations classified as skilled or semi-skilled and 28 per cent in the clerical, sales and service group.

There is a broad variation in degree of skills possessed by the persons registered in the skilled and semi-skilled occupations. By far the majority have been in the semi-skilled classifications and these too require additional training in order to fill the orders for skilled men on file at employment offices. Thus, while there were about 36,000 vacancies at employment offices at the end of January, some 20,000 were in the skilled and semi-skilled trades, most probably falling in the former, and these could not in many cases be filled despite the fact that 300,000 applications were on file at the same date.

Another significant feature of the reported labour supply was that a larger proportion was in the age group 45 years and over than at any time in the post-war period. About one out of every three applications were from persons 45 years of age or over; a little less than one out of every ten was from persons 65 and over. In actual numbers there were some 59,000 men and 11,000 women between the ages of 45 and 64 and another 23,000 and 1,200 who were 65 years of age and over. While the age problem does not prevent workers from being absorbed into employment, it does necessitate a more selective and time-consuming placement process.

One in four applications on file at the beginning of February was received from a woman. The balance between reported jobs and applications is usually better for women than men but there is still the problem of orders falling mostly in a few occupations such as stenography, domestic service, and textile sewing-machine operators, while the supply is registered for unskilled, sales, and general clerical jobs. An added placement problem has been that most of the applicants are married, and while this is not as great a barrier to placement as formerly, it does prevent many applicants from getting employment. The most difficult placement problem is when many employment "handicaps" are combined, such as the case of the older woman, who is married and seeking work but has no particular skill.

EMPLOYMENT AND PAYROLLS IN CANADA FOR 1949

The volume of employment provided by the larger firms in the major industrial divisions in Canada in 1949, while still at record levels, showed little change as compared with 1948. A detailed review of the 1949 situation in the eight leading industrial groups—manufacturing, logging, mining, transportation, communications, construction and maintenance, trade and certain services[1] appears in the *Annual Survey of Employment and Payrolls in Canada, 1949,* recently released by the Dominion Bureau of Statistics.

Taking the basic period 1926 as 100, the monthly index numbers averaged 196·2, showing an insignificant increase over the 1948 annual figure of 195·8, previously the maximum in the recorded period of 29 years. At the peak of wartime activity in 1943, the annual index was 184·1, while the post-war low average was 173·2, reached in 1946.

At the first of the year, the index number was 1·2 per cent higher than at January 1, 1948. In the following months the rate of increase was at a slightly higher level than in the same period a year earlier. By August 1, however, the position was reversed and except at September 1, 1949 was a little below its 1948 position during the latter part of the year. At December 1, the index of employment was 2·5 points lower than at the same date in 1948, although in accordance with the seasonal movement, it was 5·8 points higher than at the beginning of January, 1949.

[1] Chiefly hotels, restaurants, laundries and dry-cleaning plants.

Trends for Men and Women

On the whole, states the review, the movements of employment for men and women differed during the year under review. As compared with 1948 there was a loss of 0·1 per cent among male workers on the payrolls of the larger firms, with a rise of some 2·3 per cent among their female employees. Thus there was a small increase in the proportion of women per 1,000 workers of both sexes on the payrolls of leading establishments, which stood at 224, as compared with 220 in 1948.

Trends in Major Industries

As in both 1948 and 1947, the expansion in 1949 took place to a greater extent in the non-manufacturing groups generally than in manufacturing, in which only a nominal gain was recorded in the year under review. Among the former classes, logging showed further curtailment, the index falling by 26·7 per cent from 1948. This was mostly due, the report explains, to unfavourable weather conditions in certain areas and uncertainties in the export market resulting from currency problems.

In the other non-manufacturing industries there was a general, though moderate upward movement, and the advance in employment as compared with 1948 was 0·2 per cent in transportation, 0·6 per cent in services, 2·9 per cent in mining, 3·8 per cent in trade, 3·9 per cent in construction and maintenance, 4·1 per cent in finance and 8·6 per cent in communications. The average gain for non-manufacturing classes as a whole amounted to only 0·5 per cent.

The 1949 index in manufacturing was practically the same as in 1948, when the annual average had exceeded the 1947 figure by 3·0 per cent. The latest index was 9·3 per cent below its level in 1943, the year of maximum wartime employment, and was also lower than in 1942 and 1944.

Provincial Employment

Regionally, higher levels of total industrial employment in 1949 as compared with 1948 were recorded in five provinces and lower in four. The 1949 increases amounted to 0·6 per cent in Nova Scotia and Saskatchewan, 1·0 per cent in Ontario, 3·3 per cent in Manitoba and 6·8 per cent in Alberta, where developments in the oil fields favourably affected the general situation. Losses amounted to 1·1 per cent in British Columbia, 1·5 per cent in Quebec, 3·1 per cent in Prince Edward Island and 4·8 per cent in New Brunswick. The index of employment in the manufacturing group showed gains only in the three provinces: 1·0 per cent in Ontario, 2·7 per cent in Alberta and 3·0 per cent in Manitoba, while declines in the remaining provinces ranged from 0·3 per cent in Quebec to 4·1 per cent in British Columbia.

Wages and Salaries

The average weekly wages and salaries of persons employed by the larger establishments in the eight major industrial groups averaged $43.05 per week in 1949 before deductions were made for income tax, unemployment insurance contributions, etc., as compared with $40.11 in 1948 and $25.25 in 1941. Weekly earnings of persons on the staffs of leading manufacturing establishments reached a new all-time maximum in the year under review, standing at $44.23 compared with $40.91 in 1948.

The review announces that the present edition is the last to give index numbers of employment on the 1926 base, and those of payrolls on June 1, 1941, as 100. From early in 1951, the monthly data will be published on the 1939 basic period as 100, for employment, payrolls and average weekly salaries and wages, while the industrial grouping of the statistics will be changed to conform to the Canadian Standard Industrial Classification.

PRICES AND THE COST OF LIVING*

Cost-of-Living Index

The Dominion Bureau of Statistics cost-of-living index rose from 172·5 to 175·2 between January 2 and February 1, 1951. The increase of 2·7 points was largely due to higher prices for foods, clothing and home furnishings. The food index advanced from 220·2 to 224·4, as higher prices for most foods, particularly meats and vegetables, offset seasonal declines in eggs and oranges. Clothing rose from 187·1 to 192·4 as a result of increases in men's wear, piece goods and footwear. The index of home furnishings and services increased from 179·8 to 185·1 following advances mainly in furniture, floor coverings and house furnishings. The fuel and light index remained practically unchanged, moving from 141·5 to 141·7. The index of miscellaneous items increased 1·2 points to 137·0 due to increases in items of personal care, tires, tobacco and hospital rates. Rents were not surveyed in February and the index remained at 136·4.

From August, 1939 to February, 1951, the increase in the cost-of-living index was 73·8 per cent.

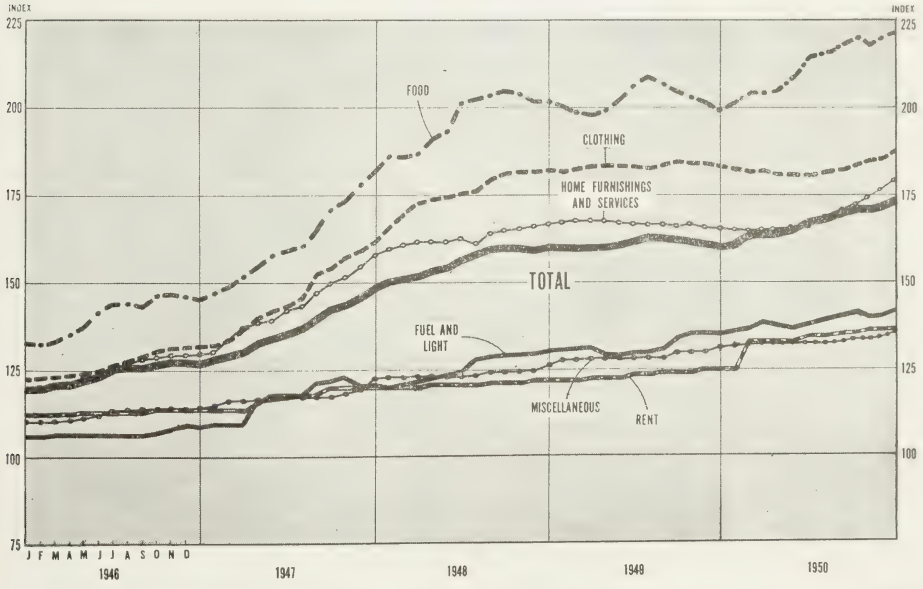
* *See* Tables F-1 to F-6.

Cost of Living in Eight Cities

Cost-of-living indexes for six of the eight regional centres registered increases between December 1, 1950 and January 2, 1951. Vancouver remained unchanged at 172·6 while the index for Edmonton receded 0·4 to 166·0. Group changes were mixed. At five centres food prices averaged lower, gains being recorded at Montreal, Toronto and Winnipeg. Clothing, home furnishings and services and miscellaneous items moved up at all centres. Fuel costs were higher for four cities while in the remaining four there was no change. Rentals recorded no change since they were not surveyed in January.

Composite city index increases between December 1 and January 2 were as follows: Montreal 2·5 to 177·8; Winnipeg 1·6 to 167·8; Toronto 1·4 to 168·6; Halifax 1·2 to 160·2; Saint John 0·8 to 168·4 and Saskatoon 0·6 to 170·2.

Wholesale Prices, December, 1950



The general index of wholesale prices moved up 1·7 points to 175·7 between November and December, 1950. All of the eight component groups contributed to the advance. Non-Ferrous Metals recorded the largest increase, with a gain of 3·3 points which brought the December index level to 179·7. Animal Products rose 2·3 points to 186·3 and Textile Products advanced 2·1 points to 199·8. Equal gains of 1·9 points for Wood Products and Non-metallic Minerals were registered by group indexes of 215·3 and 143·6 respectively. Chemical Products increased 1·6 points to 132·4 and Iron Products 1·5 points to 191·1. Vegetable Products edged up 0·8 to 149·9.

Among important commodity price increases between November and December, the following were recorded: California raisins 59·4 per cent, vinegar 44·4 per cent, bed couch 30·4 per cent, woollen blankets 23·2 per cent, crude coal tar 21·6 per cent, mattress 19·0 per cent, burlap bags 15.4 per cent, benzol 14·6 per cent, antimony 13·3 per cent, cast iron scrap 11·8 per cent, axminster rug 10·6 per cent, tallow 10·5 per cent. Decreases in prices of important commodities included the following: bacon, Toronto, 13·1 per cent, eggs, Grade A, Toronto, 10.2 per cent, Ontario malting barley 10·1 per cent, dry shore codfish 9·3 per cent, linseed oil 6·5 per cent, cocoa beans 6·0 per cent, lard, Winnipeg, 4·5 per cent, oranges 4·4 per cent.

The index of Canadian Farm Products prices at wholesale moved up 1·8 points between November and December. Animal Products advanced 3·6 points influenced by higher quotations for livestock, raw wool, hides and skins and milk. Field Products moved up 0·7 points as small increases for grains, potatoes and onions outweighed a decline in hay.

COST OF LIVING IN CANADA FROM JANUARY 1946

(1935-39=100)

78060—8

Changes in Prices Tables

Beginning with this month's issue, certain changes have been made in the prices tables published monthly in the LABOUR GAZETTE.

Food.—As part of a program modifying the procedure used in calculating the cost-of-living index, the Dominion Bureau of Statistics is reducing its sample of cities from which food prices are collected from sixty-four to thirty-four. As of January 1951, the present list of sixty-four cities is being reduced to thirty-three and St. John's, Newfoundland, is being added for the first time. While prices will be collected in Newfoundland, they will not be included in the Dominion cost-of-living index until the revision now under way is completed.

This reduction in sample size will contribute materially to speed and economy of operation without affecting index accuracy. Tabulation work required to include sixty-four cities is such that the cost-of-living index is not published until the fourth day of the month following, whereas under the new procedure it is planned to release the index in the month to which it applies. Extensive tests have established that a food index calculated from prices in thirty-three cities is as accurate as one obtained from sixty-four cities.

As a result of this action, price averages of specified foods will be published in the LABOUR GAZETTE, starting with the present issue, for thirty-four rather than sixty-four cities.

Rent.—Since November, 1947, the Dominion Bureau of Statistics has been collecting at quarterly intervals, records of rents paid by a sample of households in urban areas all across Canada. The aggregate rent paid by a group of households in a given month is compared with the aggregate rent paid by the same group for the same living quarters in the next month. With a matched sample such as this, variations due to changes in the sample and to non-response are eliminated, and the result is a reliable measure of the change in rent paid for comparable accommodation. Rent reported is cash rent paid in all cases, regardless of minor changes in the services provided. Rent for commercial properties is specifically excluded.

The foregoing record of change in rents obtained directly from a scientific sample of households is considered more accurate than previous records (now being published in the GAZETTE), which are based mainly on realtors' lists of rental properties, and which have become much smaller in recent years. As a result, this latter record is being discontinued and household sample data will now provide the sole source of rent information. While this material provides accurate individual measurements information for larger cities, the household sample is not large enough to give reliable comparisons for smaller cities and towns. Therefore, commencing with prices for January, 1951 (which are published in the present issue), average rent ranges for certain cities as formerly published in the LABOUR GAZETTE are being discontinued. Information on rent indexes for eight cities will, however, continue to be published in Table F-2, in order to provide an idea of trends in some of the larger regional centres. In the case of Saskatoon, which is one of the eight cities, the household sample has been especially enlarged for this purpose.

Corrigendum

On page 166 of the February issue of the LABOUR GAZETTE appeared a chart showing seasonal variations of employment in the Pulp and Paper Products Industry. The legend to this chart correctly stated that the seasonal aplitude of employment in this industry was 4·3 per cent, although the drawing itself would appear to have incorrectly indicated a wider variation.

This chart should have been made to conform with the following indexes: 102·1, 102·1, 102·2, 101·5, 101·1, 100·3, 97·8, 98·3, 98·3, 97·9, 98·5, 99·9, 102·1.

STRIKES AND LOCKOUTS*

Canada, January, 1951

There was a slight increase in strike activity during the first month of the year, as compared with December, 1950, the number of strikes and lockouts, the number of workers involved and the time loss all being somewhat higher. However, the majority of stoppages were of short duration and the time loss of 16,800 days was substantially below the January average of 50,000 days for the preceding ten years.

Preliminary figures for January, 1951, show 17 strikes and lockouts in existence, involving 6,253 workers, with a time loss of 16,763 man-working days, as compared with 13 strikes and lockouts in December, 1950, with 2,562 workers involved, and a loss of 8,438 days. In January, 1950, there were nine strikes and lockouts, involving 2,456 workers, and a loss of 39,488 days.

Based on the number of non-agricultural wage and salary workers in Canada, the time lost in January, 1951, was 0·02 per cent of the estimated working time, as compared with 0·01 per cent in December, 1950, and 0·05 per cent for January, 1950.

Of the 17 strikes and lockouts in existence during the month, six were settled in favour of the workers, three in favour of the employers, two were compromise settlements and two were indefinite in result, work being resumed pending final settlement. At the end of the month four strikes and lockouts were recorded as unterminated.

The record does not include minor strikes such as are defined in another paragraph nor does it include strikes and lockouts about which information has been received indicating that employment conditions are no longer affected but which the unions concerned have not declared terminated. Strikes of this nature which are still in progress are: compositors, etc., at Winnipeg, Man., which commenced on November 8, 1945, and at Ottawa and Hamilton, Ont., and Edmonton, Alta., on May 30, 1946; electrical apparatus factory workers at Vancouver, B.C., May 11, 1950; laundry machinery factory workers at Toronto, Ont., June 16, 1950; and cleaners and dyers at Toronto, Ont., October 4, 1950. The strike of textile products factory workers at St. Lambert, P.Q., August 29, 1949, is considered to have lapsed, and the strike of printers at St. John's, Nfld., which commenced on May 22, 1950, was terminated on August 12, 1950.

Great Britain and Other Countries

The latest available information as to strikes and lockouts in various countries is given in the LABOUR GAZETTE from month to month. Statistics given in the annual review issued as a supplement to the LABOUR GAZETTE for April, 1950, and in this article are taken, as far as possible, from the government publications of the countries concerned.

Great Britain and Northern Ireland

The British *Ministry of Labour Gazette* publishes statistics dealing with disputes involving stoppages of work and gives some details of the more important ones.

The number of work stoppages beginning in November, 1950, was 93 and 11 were still in progress from the previous month, making a total of 104 during the month. In all stoppages of work in progress in the period there were 18,600 workers involved and a time loss of 67,000 working days was caused.

Of the 93 disputes leading to stoppages of work which began in November, four directly involving 200 workers, arose out of demands for advances in wages, and 32, directly involving 2,600 workers, on other wage questions; two, directly involving 200 workers, on questions as to working hours; 12, directly involving 1,100 workers, on questions respecting the employment of particular classes or persons; 37, directly involving 2,600 workers, on other questions respecting working arrangements; four, directly involving 400 workers on questions of trade union principle; and two, directly involving 100 workers, were in support of workers involved in other disputes.

United States

Preliminary estimates prepared by the United States Bureau of Labor Statistics, for the year 1950, show 4,700 strikes and lockouts involving about 2,300,000 workers and causing a time loss of 38,500,000 man-days. Comparable figures for 1949, are 3,606 strikes and lockouts with 3,030,000 workers involved and a time loss of 50,500,000 days.

For December, 1950, preliminary figures show 200 strikes and lockouts beginning in the month, with 40,000 workers involved and a time loss, for all strikes and lockouts in progress during the month, of 1,000,000 days.

* *See* Tables G-1 and G-2.

FATAL INDUSTRIAL ACCIDENTS IN CANADA*

Fourth Quarter of 1950

There were 314[1] industrial fatalities in the fourth quarter of 1950 according to the latest reports received by the Department of Labour. This marks an increase of one fatality over the previous quarter in which 313 were recorded including 25 in a supplementary list. During the fourth quarter of 1949 there were 401 deaths as a result of industrial accidents including 44 in supplementary lists.

The industrial fatalities recorded are those fatal accidents which involved persons gainfully employed and which occurred during the course of or arising out of their employment. These include deaths which resulted from industrial diseases as reported by provincial Workmen's Compensation Boards.

Statistics on industrial fatalities are compiled from reports received from the various provincial Workmen's Compensation Boards, the Board of Transport Commissioners, and certain other official sources. Newspaper reports are used to supplement these data. For those industries not covered by workmen's compensation legislation, newspaper reports are the Department's only source of information. It is possible therefore that coverage in such industries as agriculture, fishing and trapping and certain of the service groups is not as complete as in those industries which are covered by compensation legislation.

During the quarter under review there were six accidents which resulted in the deaths of three or more persons in each case. On November 11, the Leduc Hotel in Leduc, Alberta was wrecked by an explosion, and the fire which followed cost the lives of three employees. Seven crew members of the aircraft *Canadian Pilgrim* perished when the plane crashed in the French Alps. Many more persons lost their lives, but for the purpose of these statistics only those whose deaths were a result of their employment are listed. On November 21, four trainmen were killed, when two trains, one a troop train, carrying members of Canada's Special Service Force, met in a head-on collision at Canoe River, British Columbia. Five employees of a large department store in Halifax were burned to death when fire destroyed the building in which they were working on November 30. On December 5, three loggers were drowned in the Nimpkish River, British Columbia, when their boat was swamped while transporting supplies back to camp. Three employees of the British Columbia Forest Service lost their lives by drowning on December 15, when the forestry launch *A. L. Bryant* was in collision with the steamship *Lady Cynthia* off Bowen Island.

Grouped by industries the largest number of fatalities, 61, was recorded in the transportation industry; during the previous quarter there were 48 in this industrial group. There were 51 fatalities in manufacturing in the fourth quarter; 20 of these were in the iron and steel industry and 10 in the saw and planing mill products group. During the third quarter of 1950 there were 54 fatalities in manufacturing, 13 of which occurred in the saw and planing mill products group.

In the three months under review there were 48 fatalities in the mining industry as compared with 19 in the previous quarter. Accidents in coal mining numbered 18 as compared with 10 in the preceding three months. Fatal accidents involving workers in the metal mining industry accounted for 18 fatalities as compared to 9 in the previous quarter.

Increased seasonal activity in the logging industry is reflected in the number of fatalities 42, an increase of 23 over the number recorded in the third quarter; in the fourth quarter of 1949 there were 48 fatal accidents in logging.

In the construction industry fatal accidents during the fourth quarter showed a considerable decline, with 35 recorded as compared with 59 in the preceding three months of 1950.

In the various branches of the service industry there were 24 accidental deaths as compared with 44 in the previous three months, and 51 during the fourth quarter of 1949.

Seventeen persons died as a result of accidents in the fishing and trapping industries during the quarter as compared with 10 in the third quarter of 1950.

As mentioned above, information in regard to accidents in agriculture is obtainable only from newspaper reports. Only 13

* *See* Tables H-1 and H-2.

1 The number of industrial fatalities that occurred during the fourth quarter of 1950 is probably greater than the figure now quoted. Supplementary lists compiled from reports received in subsequent quarters, generally revise upwards the figures for previous periods.

fatal accidents were reported in the fourth quarter of 1950, two less than the 15 recorded in the previous quarter.

During the quarter under review there were 13 industrial deaths in trade, one less than the number recorded in the preceding three months.

An analysis of the causes of fatal industrial accidents which occurred during the quarter shows that 93 or 29·6 per cent were caused by moving trains, watercraft or other vehicles. Industrial diseases, strain, drownings, etc. were responsible for 47 of 68 deaths reported under "Other Causes". "Falling objects" and "dangerous substances" which include electric current, each accounted for 42 fatalities. Falls of persons resulted in 39 or 12·4 per cent of the deaths recorded.

By province the largest number of fatalities was recorded in Ontario where there were 96. In British Columbia there were 71, Quebec, 57 and Alberta, 41.

During the quarter under review there were 127 fatalities in November, 98 in October, and 89 in December.

SELECTED PUBLICATIONS RECEIVED RECENTLY IN LIBRARY OF DEPARTMENT OF LABOUR*

The publications listed below are not for sale by the Department of Labour. Persons wishing to purchase them should communicate with the publishers. Publications listed may be borrowed, free of charge, by making application to the Librarian, Department of Labour, Ottawa. Students must apply through the library of their institution. Applications for loans should give the number (numeral) of the publication desired and the month in which it was listed in the Labour Gazette.

TABLE I.—STATISTICS REFLECTING INDUSTRIAL CONDITIONS IN CANADA

Items	1951	1950	1949	1948	1944	1939
	January	December	December	December	December	December
Total Population [1] 000	.....	13,921	13,636	12,833	11,975	11,267
Labour Force—						
Civilian labour force [2] 000	.....	5,201	5,200	4,964	†	†
Persons with jobs [2] 000	.....	5,084	5,053	4,858	†	†
Male [2] 000	.....	3,986	3,967	3,835	†	†
Female [2] 000	.....	1,098	1,086	1,023	†	†
Paid workers [2] 000	.....	3,683	3,580	3,441	†	†
Persons without jobs and seeking work [2] 000	.....	117	147	106	†	†
Index of employment, 8 leading Industries [3]	.....	212·5	201·8	240·3	185·7	122·7
Immigration ..... No.	.....	7,061	5,164	9,995	1,493	62·1
Adult males ..... No.	.....	3,044	1,953	3,888	181	188
Earnings and Hours—						
Total labour income $000,000	.....	.....	642	614	550	479
Per capita weekly earnings, 8 leading inds ..... $	.....	46·72	43·81	42·23	32·19	†
Average hourly earnings, manufacturing c	.....	107·7	100·0	96·0	†	†
Average hours worked per week, manufacturing	.....	43·1	42·9	43·2	†	†
Real weekly earnings, manufacturing [4]	.....	111·0	108·6	106·7	†	†
National Employment Service—						
Live Applications for employment (1st of month) [5] 000	226·9	186·3	220·8	129·6	72·3	†
Unfilled Vacancies (1st of month) [5] 000	34·4	43·1	22·5	34·6	154·8	†
Placements, weekly average 000	.....	15·8	12·5	10·1	†	†
Unemployment Insurance—						
Ordinary live claims 000	190·1 [9]	124·8	152·3	83·7	13·4	†
Balance in fund $000,000	.....	647·8	589·4	517·7	250·1	†
Price Indexes—						
Wholesale [3]	.....	175·7	156·9	159·6	102·5	81·7
Cost of living index [6]	172·5	171·1	161·5	158·9	118·5	103·8
Residential building materials [6]	.....	.....	226·2	229·0	146·6 [7]	102·3 [7]
Production—						
Industrial production index [6]	.....	210·2	186·8	185·8	189·8	119·5
Mining production index [6]	.....	.....	138·7	136·3	106·3	120·0
Manufacturing index [6]	.....	219·6	196·5	197·2	209·3	120·4
Electric power ..... 000,000 k.w.h.	.....	4,662	4,040	3,695	3,356	2,536
Construction—						
Contracts awarded $000,000	.....	.....	121·5	56·0	12·7	9·4
Dwelling units, started 000	.....	.....	4·2	3·8	†	†
Completed 000	.....	.....	6·8	8·0	†	†
Under construction 000	.....	.....	60·7	61·1	†	†
Pig iron ..... 000 tons	.....	198·2	172·0	179·1	139·2	94·6
Steel ingots and castings ..... 000 tons	.....	291·2	263·9	279·2	243·5	150·1
Inspected slaughtering, cattle 000	.....	.....	112·7	123·4	153·5	65·6
Hogs 000	.....	.....	521·2	376·4	767·7	403·8
Flour production ..... 000,000 bbls.	.....	1·97	1·65	1·72	2·03	1·60
Newsprint ..... 000 tons	.....	.....	414·9	385·8	245·0	240·7
Cement producers' shipments ..... 000,000 bbls.	.....	.....	763	742	190 [8]	206 [8]
Automobiles and trucks 000	.....	30·7	25·9	27·3	12·5	17·0
Gold ..... 000 fine oz.	.....	383·1	373·2	327·0	229·6	434·5
Copper ..... 000 tons	.....	.....	23·7	20·8	22·9	26·3
Lead ..... 000 tons	.....	.....	22·3	13·8	17·6	15·8
Nickel ..... 000 tons	.....	.....	10·8	13·1	10·9	8·9
Zinc ..... 000 tons	.....	.....	27·2	18·2	25·4	17·6
Coal ..... 000 tons	.....	1,888	1,815	1,840	1,524	1,486
Crude petroleum ..... 000 bbls	.....	.....	1,782	1,248	879	503
Distribution—						
Wholesale sales index, unadjusted [6]	.....	282·7	261·5	259·9	171·5	105·3
Retail sales $000,000	.....	.....	800·1	770·5	†	†
Imports, excluding gold $000,000	.....	266·3	213·4	232·0	127·2	72·1
Exports, excluding gold $000,000	.....	289·9	285·5	316·4	266·9	101·0
Railways—						
Revenue freight, ton miles 000,000	.....	.....	4,545	5,013	5,192	2,976
Car loadings, revenue freight 000	.....	314·0	300·6	316·0	273·0	200·0
Banking and Finance—						
Common stocks, index [6]	.....	146·3	117·9	115·8	86·6	92·2
Preferred stocks, index [6]	.....	.....	150·7	144·6	129·8	110·1
Bond yields, Dominion index [6]	.....	96·7	90·3	95·5	96·9	110·5
Cheques cashed, individual accounts $000,000	.....	9,315	8,396	7,800	5,063	3,057
Bank loans, current public $000,000	.....	2,651	2,174	2,077	1,182	960
Money supply $000,000	.....	4,851	4,422	4,335	3,153 [7]	1,370 [7]
Circulating media in hands of public $000,000	.....	1,214	1,184	1,185	990	281 [7]
Deposits $000,000	.....	3,637	3,238	3,150	2,163 [7]	1,089 [7]

NOTE.—Latest figures subject to revision. Many of the statistical data in this table are included in the Canadian Statistical Review issued by the Dominion Bureau of Statistics.

† Comparable statistics are not available.

[1] Population figures are as at the first day of September for 1950, 1949 and June 1, for 1948, 1944, 1939.

[2] Labour Force Survey figures given are as at November 4, 1950, October 29, 1949, November 20, 1948. Detailed figures for November 1950 will be found in the February issue of the Labour Gazette.

[3] Average 1926=100.

[4] Real earnings computed by dividing index of average weekly earnings of wage-earners in manufacturing by the cost-of-living index; base: Average for 1946=100.

[5] Newfoundland is included after April 1, 1949.

[6] Average 1935–39=100.

[7] Year end figures.

[8] Figures for 1939–44 are production data rather than shipments.

[9] Includes ordinary live claimants plus claimants for supplementary benefit. Latter totalled 6,833 at January 1, 1951.

TABLE A-1.—IMMIGRATION OF ADULT MALES, ADULT FEMALES, AND CHILDREN TO CANADA

SOURCE: Immigration Branch, Department of Citizenship and Immigration

Date	Adult Males	Adult Females	Children Under 18	Total
Annual Average, 1920–24	55,416	34,803	20,315	110,534
Annual Average, 1925–29	74,447	37,345	30,517	142,309
Annual Average, 1930–34	12,695	12,145	11,117	35,957
Annual Average, 1935–39	3,564	5,834	5,054	14,452
Annual Average, 1940–44	3,767	6,674	4,010	14,451
Annual Average, 1945–49	26,701	31,075	18,064	75,840
1949—Total	39,044	32,957	23,216	95,217
1949—December	1,953	1,835	1,376	5,164
1950—				
January	1,234	1,414	1,062	3,710
